Elements

Alternate text

Alternate text is a textual description of an image that can be read or displayed in place of the image. This is commonly used to create text alternatives for readers or systems that cannot view the original image.

Usage information

XDITA	<alt> inside <image>
HDITA	@alt attribute on
MDITA (core and extended profiles)	Text inside square brackets ([]) in an Image

Processing expectations

Processors SHOULD render the content of the alternate text component as alternative text for the image that provides it.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of alternate text in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "topic.dtd">
<topic id="intro-product">
  <title>Remote Lighting Overview</title>
  <body>
    <p>The Remote Lighting Network kit includes a wireless smart system that helps make the lighting in your home more energy efficient and easier to manage.</p>
    <fig>
      <image href="images/kit-package.jpg"><alt>Retail package for the Remote Lighting Network kit </alt></image>
    </fig>
  </body>
</topic>
```

HDITA example

The following example demonstrates the use of alternate text in an HDITA topic.

```
<!DOCTYPE html>
<html>
<head>
  <title>Home</title>
</head>
<body>
  <article id="intro-product">
    <h1>Remote Lighting Overview</h1>
```

```

    <p>The Remote Lighting Network kit includes a wireless smart system that
    helps make the lighting in your home more energy efficient and easier to
    manage.</p>
    <figure>
      
    </figure>
  </article>
</body>
</html>

```

MDITA example

The following example demonstrates the use of alternate text in an MDITA topic.

```
# Remote Lighting Overview
```

```
The Remote Lighting Network kit includes a wireless smart system that helps
make the lighting in your home more energy efficient and easier to manage.
```

```
![Retail package for the Remote Lighting Network kit] (images/kit-package.jpg)
```

Audio

Usage information

XDITA	<code><audio></code>
HDITA	<code><audio></code>
MDITA (core and extended profiles)	There is no specific support in MDITA core profile. If needed, use an HDITA snippet.

Processing expectations

It sounds pretty? See the HTML spec?

Attributes

Link to table!

XDITA example

The following example demonstrates the use of audio in an XDITA topic.

```

<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="theme-song">
  <title>Theme song for our radio show</title>
  <body>
    <audio>
      <desc>Theme song for the radio show</desc>
      <media-controls value="true"/>
      <media-autoplay value="false"/>
      <media-loop value="true"/>
      <media-muted value="true"/>
      <media-source value="theme-song.mp3"/>
      <media-track value="theme-song.vtt" type="captions"/>
    </audio>
  </body>
</topic>

```

```

</body>
</topic>

```

HDITA example

The following example demonstrates the use of audio in an HDITA topic.

```

<!DOCTYPE html>
<title>Theme song for our radio show</title>
<body>
  <article id="theme-song">
    <h1>Theme song for our radio show</h1>
    <audio title="Theme song for the radio show" controls autoplay loop muted>
      <source src="theme-song.mp3"/>
      <track src="theme-song.vtt" kind="captions"/>
    </audio>
  </article>
</body>

```

Autoplay

Usage information

XDITA	<code><media-autoplay></code> inside <code><audio></code> or <code><video></code>
HDITA	<code>@autoplay</code> attribute on <code><audio></code> or <code><video></code>
MDITA (core and extended profiles)	There is no specific support in MDITA core profile. If needed, use an HDITA snippet.

Formatting expectations

Attributes

[Link to table!](#)

XDITA example

The following example demonstrates the use of autoplay in an XDITA topic.

```

<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="sensei-promise">
  <title>The Sensei Sushi Promise</title>
  <body>
    <video>
      <desc>Video about the Sensei Sushi promise</desc>
      <video-poster value="sensei-video.jpg"/>
      <media-controls value="true"/>
      <media-autoplay value="false"/>
      <media-loop value="true"/>
      <media-muted value="true"/>
      <media-source value="sensei-video.mp4"/>
      <media-track value="sensei-video.vtt" type="captions"/>
    </video>
  </body>
</topic>

```

HDITA example

The following example demonstrates the use of autoplay in an HDITA topic.

```
<!DOCTYPE html>
<title>The Sensei Sushi Promise</title>
<body>
  <article id="sensei-promise">
    <h1>The Sensei Sushi Promise</h1>
    <video title="Video about the Sensei Sushi promise" controls autoplay loop
muted poster="sensei-video.jpg">
      <source src="sensei-video.mp4"/>
      <track src="sensei-video.vtt" kind="captions"/>
    </video>
  </article>
</body>
```

Bold text

Bold text is used to draw a reader's attention to a phrase without otherwise adding meaning to the content.

Usage information

XDITA	<code></code>
HDITA	<code></code>
MDITA (core and extended profiles)	<code>**</code> or <code>__</code>

Processing expectations

In text, processors SHOULD render the contents of bold text in typographical bold. In audio and other rendering formats, processors MAY distinguish the contents of bold text in some other way.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of bold text in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="max-number-bulbs">
  <title>Maximum Number of Network Light Bulbs</title>
  <p>There is a limit to the number of light bulbs at which the performance
of the Remote Lighting Network begins to decrease.
  Testing has shown that the lighting network should be limited to a
  <b>maximum of 250 light bulbs</b> to maintain reliability in
  performance.</p>
</topic>
```

HDITA example

The following example demonstrates the use of bold text in an HDITA topic.

```
<!DOCTYPE html>
<html>
<head>
```

```

<title>Maximum Number of Network Light Bulbs</title>
</head>
<body>
  <article id="max-number-bulbs">
    <h1>Maximum Number of Network Light Bulbs</h1>
    <p>There is a limit to the number of light bulbs at which the performance
of the Remote Lighting Network begins to decrease.
Testing has shown that the lighting network should be limited to a
<strong>maximum of 250 light bulbs</strong> to maintain reliability in
performance.</p>
  </article>
</body>
</html>

```

MDITA example

The following example demonstrates the use of bold text in an MDITA topic.

```
# Maximum Number of Network Light Bulbs
```

```

There is a limit to the number of light bulbs at which the performance of
the Remote Lighting Network begins to decrease.
Testing has shown that the lighting network should be limited to a maximum
of 250 light bulbs to maintain reliability in
performance.

```

Body

The body contains the main content of a topic.

Usage information

XDITA	<body>
HDITA	<body>
MDITA (core and extended profiles)	There is no explicit markup for the body component in MDITA

Processing expectations

Attributes

[Link to table!](#)

XDITA example

The following example demonstrates the use of body in an XDITA topic.

```

<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">

  <title>An innovative, attractive, and out of the ordinary concept</title>
  <shortdesc>Are you interested in investing with us? Welcome to our franchise
information package.</shortdesc>
</topic>

```

HDITA example

The following example demonstrates the use of body in an HDITA topic.

```
<!DOCTYPE html>
<title>An innovative, attractive, and out of the ordinary concept</title>
<body>
  <article id="franchise-intro">
    <h1>An innovative, attractive, and out of the ordinary concept</h1>
    <p>Are you interested in investing with us? Welcome to our franchise
information package.</p>
  </article>
</body>
```

MDITA example

The following example demonstrates the equivalent of the body component in an MDITA topic.

```
# An innovative, attractive, and out of the ordinary concept
```

```
Are you interested in investing with us? Welcome to our franchise information
package.
```

Controls

Usage information

XDITA	<code><media-controls></code> inside <code><audio></code> or <code><video></code>
HDITA	<code>@controls</code> attribute on <code><audio></code> or <code><video></code>
MDITA (core and extended profiles)	There is no specific support in MDITA core profile. If needed, use an HDITA snippet.

Formatting expectations

Attributes

Link to table!

XDITA example

The following example demonstrates the use of controls in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="sensei-promise">
  <title>The Sensei Sushi Promise</title>

    <video>
      <desc>Video about the Sensei Sushi promise</desc>
      <video-poster value="sensei-video.jpg"/>
      <media-controls value="true"/>
      <media-autoplay value="false"/>
      <media-loop value="true"/>
      <media-muted value="true"/>
      <media-source value="sensei-video.mp4"/>
      <media-track value="sensei-video.vtt" type="captions"/>
    </video>
```

```

</body>
</topic>

```

HDITA example

The following example demonstrates the use of controls in an HDITA topic.

```

<!DOCTYPE html>
<title>The Sensei Sushi Promise</title>
<body>
  <article id="sensei-promise">
    <h1>The Sensei Sushi Promise</h1>
    <video title="Video about the Sensei Sushi promise" controls autoplay loop
    muted poster="sensei-video.jpg">
      <source src="sensei-video.mp4"/>
      <track src="sensei-video.vtt" kind="captions"/>
    </video>
  </article>
</body>

```

Data

Data is a generic component that represents metadata within a DITA topic or map. Complex metadata is represented by nested data structures.

Usage information

XDITA	<data>
HDITA	<meta> inside <head>
MDITA (extended profile)	There is no specific syntax for data in MDITA core profile. In MDITA extended profile, data is represented by any variables declared in a YAML front matter header. The front matter must be the first block in the file and must be set between triple- dashed lines.

    <figure>
      
    </figure>
  </article>
</body>
</html>
```

Footnote

The `<fn>` element specifies content for an ancillary note placed in the footer of a page or at the end of an online article. Such content is usually inappropriate for inline inclusion. The `<fn>` element also is used to indicate the source for facts or other material that is cited in the text.

Usage information

XDITA

`<fn>`. The footnote component is composed of two elements: the cross-reference that calls it, and the actual footnote content.

HDITA

``. The footnote division should have a unique `@id` attribute. In the body of the text, where the footnote is called from, an internal cross-reference in the form of `` should embrace the text that you want to make clickable for the footnote.

MDITA (extended profile)

A footnote is made of two elements: a marker in the text that will become a superscript number; a footnote definition that will be placed in a list of footnotes at the end of the document, following the [PHP Markdown Extra syntax for footnotes](#).

Processing expectations**Attributes**

Link to table!

XDITA example

The following example demonstrates the use of footnote in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="franchise-terms">
  <title>Profits, fun, and flavor under the same brand</title>

    <dl>
      <dlentry>
        <dt>Initial investment:</dt>
        <dd>
          <p>$700<xref href="#franchise-terms/initial-fee"/></p>
        </dd>
      </dlentry>
      <dlentry>
        <dt>Franchise fee:</dt>
        <dd><p>$200</p></dd>
      </dlentry>
    </dl>
    <fn id="initial-fee">
      <p>The initial investment price includes the first franchise fee
      payment</p>
    </fn>
  </body>
</topic>
```

HDITA example

The following example demonstrates the use of footnote in an HDITA topic. In this example, the clickable text is a number 1 in a [superscript](#) (<sup>) component.

```
<!DOCTYPE html>
<title>Profits, fun, and flavor under the same brand</title>
<body>
  <article id="franchise-terms">
    <h1>Profits, fun, and flavor under the same brand</h1>
    <dl>
      <dt>Initial investment:</dt>
      <dd>
        <p>$700<a href="#initial-fee"><sup>1</sup></a></p>
      </dd>
      <dt>Franchise fee:</dt>
      <dd>
        <p>$200</p>
      </dd>
    </dl>
```

```

        <div id="initial-fee" data-class="fn">
          <p>The initial investment price includes the first franchise fee
payment</p>
        </div>
</article>
</body>

```

MDITA example

The following example demonstrates the use of footnote in an MDITA extended profile topic.

```
# Profit, fun, and flavor under the same brand
```

```
Initial investment
: $700[1]
```

```
Franchise fee
: $200
```

```
[1]: The initial investment price includes the first franchise fee payment
```

Image

An image is a reference to artwork that is stored outside of the content.

Usage information

XDITA

```
<image>
```

In XDITA, `<image>` is always treated as an inline element; an `<image>` inside a `<fig>` is treated as a block element

HDITA

```
<img>
```

MDITA (core and extended profiles)

```
![alt text for an image](images/image_name.jpg)

  </article>
</body>

```

Ordered list

An ordered list is a list of items that are sorted by sequence or order of importance.

Usage information

XDITA	
HDITA	
MDITA (core and extended profiles)	See List item on page 22

Processing expectations

In text rendering, list item children of ordered list SHOULD be rendered as a typographical ordered list. Audio and other rendering formats MAY embellish the children of ordered list to signal that the list items do have an inherent order.

Processors SHOULD consider the nesting level of the ordered list component in choosing the indentation level and list item label that is applied to list item children.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of ordered list in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>

```
# Make a plan! Start your future today!

1. Contact one of our franchise advisors
2. Pick a location for your restaurant
3. Follow our franchise guide
```

Paragraph

A paragraph is a single unit of text that contains a main idea.

Usage information

XDITA	<code><p></code>
--------------	------------------------

HDITA	<code><p></code>
--------------	------------------------

MDITA (core and extended profiles)

One or more consecutive lines of text, separated by one or more blank line.

Processing expectations**Attributes**

Link to table!

XDITA example

The following example demonstrates the use of paragraph in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="franchise-intro">
  <title>An innovative, attractive, and out of the ordinary concept</title>
  <body>
    <p>We offer more than 30 exclusive creations of original rolls, from the
California roll to sushi with BBQ chicken or grilled steak.</p>
  </body>
</topic>
```

HDITA example

The following example demonstrates the use of paragraph in an HDITA topic.

```
<!DOCTYPE html>
<title>An innovative, attractive, and out of the ordinary concept</title>
<body>
  <article id="franchise-intro">
    <h1>An innovative, attractive, and out of the ordinary concept</h1>
    <p>We offer more than 30 exclusive creations of original rolls, from the
California roll to sushi with BBQ chicken or grilled steak.</p>
  </article>
</body>
```

MDITA example

The following example demonstrates the use of paragraph in an MDITA topic.

```
# An innovative, attractive, and out of the ordinary concept
```

```
We offer more than 30 exclusive creations of original rolls, from the
California roll to sushi with BBQ chicken or grilled steak.
```

Phrase

The `<ph>` element is used to enclose a phrase for reuse or conditional processing (for example, when part of a paragraph applies to a particular audience). It can be used by specializations of DITA to create semantic markup for content at the phrase level, which then allows (but does not require) specific processing or formatting.

Usage information

XDITA	<code><ph></code>
HDITA	<code></code>

MDITA (core and extended profiles)

There is no specific support in MDITA core profile. If needed, use an HDITA snippet.

Processing expectations

In rendering, processors MAY distinguish the contents of phrase in some way based on its attribute values. For example, a Lightweight DITA editor may flag the contents of phrase based on its `@role` or `@translate` attribute, if set.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of phrase in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="franchise-offer">
  <title>What we offer</title>
  <body>
    <ul>
      <li><p><ph translate="no">Know-how</ph> license</p></li>
      <li><p>Warranty of territory exclusivity</p></li>

      <video-poster value="sensei-video.jpg"/>
      <media-controls value="true"/>
      <media-autoplay value="false"/>
      <media-loop value="true"/>
      <media-muted value="true"/>
      <media-source value="sensei-video.mp4"/>
      <media-track value="sensei-video.vtt" type="captions"/>
    </video>
  </body>
</topic>
```

HDITA example

The following example demonstrates the use of poster in an HDITA topic.

```
<!DOCTYPE html>
<title>The Sensei Sushi Promise</title>
<body>
  <article id="sensei-promise">
    <h1>The Sensei Sushi Promise</h1>
```

```

    <video title="Video about the Sensei Sushi promise" controls autoplay loop
    muted poster="sensei-video.jpg">
    <source src="sensei-video.mp4"/>
    <track src="sensei-video.vtt" kind="captions"/>
</video>
</article>
</body>

```

Preformatted text

Preformatted text is text that contains line breaks and spaces that are intended to be preserved at publication time.

Usage information

XDITA	<pre>
HDITA	<pre>
MDITA (core and extended profiles)	Fenced code blocks (e.g. ``text``) or indented code blocks (e.g. text)

Processing expectations

In text rendering, processors SHOULD preserve white space and line breaks in rendering the content of preformatted text. Processors MAY apply other visual distinctions to the contents of preformatted text, such as indentation, highlighting, or background color. In other rendering formats, processors MAY apply other embellishments to distinguish the contents of preformatted text.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of preformatted text in an XDITA topic.

```

<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="sensei-promise">
  <title>The Sensei Sushi Promise</title>
  <body>
    <pre>
      Sensei Sushi cares about tradition
      Sensei Sushi cares about the customer
      Sensei Sushi cares about fun.
    </pre>
  </body>
</topic>

```

HDITA example

The following example demonstrates the use of preformatted text in an HDITA topic.

```

<!DOCTYPE html>
<title>The Sensei Sushi Promise</title>
<body>
  <article id="sensei-promise">
    <h1>The Sensei Sushi Promise</h1>
    <pre>

```

```

    Sensei Sushi cares about tradition
    Sensei Sushi cares about the customer
    Sensei Sushi cares about fun.
  </pre>
</article>
</body>

```

MDITA example

The following example demonstrates the use of preformatted text in an MDITA topic.

```
# The Sensei Sushi Promise
```

```

    Sensei Sushi cares about tradition

    Sensei Sushi cares about the customer

    Sensei Sushi cares about fun.

```

Prolog

The prolog contains metadata about the topic, for example, author information or subject category.

Usage information

XDITA

<prolog>

HDITA

<meta> inside <head>

MDITA (extended profile)

Any variables declared in a YAML front matter header. The front matter must be the first block in the file and must be set between triple- dashed lines.

Processing expectations

      <h2>Terms and conditions</h2>
      <p>Support is reserved for franchises that are without bills past due
payment.</p>
    </section>
  </article>
</body>

```

MDITA example

The following example demonstrates the use of section in an MDITA topic.

```

# What we offer

We offer warranty of territory exclusivity, initial training, and support
through online, email, and telephone channels.

## Terms and conditions

Support is reserved for franchises that are without bills past due payment.

```

Short description

A short description describes the purpose or main point of a topic.

Usage information

XDITA	<shortdesc>
HDITA	First element in <article>, if it is a <p>, after <title>
MDITA (core and extended profiles)	First block, if it is a paragraph , after title

Formatting expectations

When present, the content of the short description component is displayed as the first paragraph of a topic. It may also be used for other purposes, such as link previews and summaries.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of a short description in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-

into light fixtures, preparing the remote control, and programming lighting
groups.</p>
  </article>
</body>
</html>
```

MDITA example

The following example demonstrates the use of a short description in an MDITA topic.

```
# Installing and Setting up Remote Lighting
```

```
Installation of your lighting kit includes installing the light bulbs
into light fixtures, preparing the remote control, and programming lighting
groups.
```

Table

Simple tables are tables that are regular in structure and do not need a caption.

Usage information

XDITA	<code><simpletable></code>
HDITA	<code><table></code>
MDITA (core and extended profiles)	A table should contain a header row, a delimiter row, and zero or more rows with entries. Table entries inside a row should be separated by pipes (), and the delimiter should contain hyphens (-), and optionally, a leading or

trailing colon (:), or both, to indicate left, right, or center alignment respectively.

Formatting expectations

Subscript

A subscript is text that is printed below the line. It is frequently used in chemical and mathematical formulas.

Usage information

XDITA	<code><sub></code>
HDITA	<code><sub></code>
MDITA (extended profile)	There is no specific support in MDITA core profile. If needed, use an HDITA snippet.

Processing expectations

In text, processors SHOULD render the contents of subscript as a typographical subscript. In audio and other rendering formats, processors MAY distinguish the contents of subscript in some other way.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of a subscript in an XDITA topic.

```

<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="food-additives">
    <title>Food Additives for pH Control</title>
    <body>
        <p>In very rare occasions, our Sensei Sushi kitchen lab technicians can
use Sulfuric Acid, FCC (H<sub>2</sub>SO<sub>4</sub>) to control pH during
processing. Ask your supervisor for more information.</p>
    </body>

```

```
</topic>
```

HDITA example

The following example demonstrates the use of a subscript n in an HDITA topic.

```
<!DOCTYPE html>
<html>

<body>
<article id="food-additives">
  <h1>Food Additives for pH Control</h1>
  <p>In very rare occasions, our Sensei Sushi kitchen lab technicians can
  use Sulfuric Acid, FCC (H<sub>2</sub>SO<sub>4</sub>) to control pH during
  processing. Ask your supervisor for more information.</p>
</article>
</body>
</html>
```

Superscript

A superscript is text that is printed above the line. It is frequently used in chemical and mathematical formulas.

Usage information

XDITA	<code><sup></code>
HDITA	<code><sup></code>
MDITA (extended profile)	There is no specific support in MDITA core profile. If needed, use an HDITA snippet.

Processing expectations

In text, processors SHOULD render the contents of superscript as a typographical superscript. In audio and other rendering formats, processors MAY distinguish the contents of superscript in some other way.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of superscript in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="requirements">
  <title>Franchise Requirements</title>
  <body>
    <p>Franchised restaurants should be located in areas of at least 200
    ft<sup>2</sup>.</p>
  </body>
</topic>
```

HDITA example

The following example demonstrates the use of superscript in an HDITA topic.

```
<!DOCTYPE html>
<html>
<head>
<title>Franchise Requirements</title>
</head>
<body>
  <article id="requirements">
    <h1>Franchise Requirements</h1>
    <p>Franchised restaurants should be located in areas of at least 200
ft<sup>2</sup>.</p>
  </body>
</html>
```

Title

A title is a heading or label for an object. Titles can be associated with topics, maps, sections, examples, figures, tables, and other structures.

Usage information

XDITA

<title> in <topic>, <section>, <fig>... where else?

HDITA

<h1> and <title> for [topic](#); <h2> for [section](#) (Title should map to both <title> and <h1> in HDITA). Better way to say this? <figcaption> in <figure>. Title also applied to audio and video in HDITA as attribute

MDITA (core and extended profiles)

or === underline for [topic](#); ## or ----- underline for [section](#)

Formatting expectations

When present, the content of the short description component is displayed as the first paragraph of a topic. It may also be used for other purposes, such as link previews and summaries.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of a title in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="install-and-setup">
  <title>Installing and Setting up Remote Lighting</title>
  <shortdesc>Installation of your lighting kit includes installing the light
bulbs into
  light fixtures, preparing the remote control, and programming lighting
groups.
  </shortdesc>
</topic>
```

HDITA example

The following example demonstrates the use of a title in an HDITA topic.

```

<!DOCTYPE html>
<html>
<head>
<title>Installing and Setting up Remote Lighting</title>
</head>
<body>
  <article id="install-and-setup">
    <h1>Installing and Setting up Remote Lighting</h1>
    <p>Installation of your lighting kit includes installing the light bulbs
into light fixtures, preparing the remote control, and programming lighting
groups.</p>
  </article>
</body>
</html>

```

MDITA example

The following example demonstrates the use of a title in an MDITA topic.

```

# Installing and Setting up Remote Lighting

Installation of your lighting kit includes installing the light bulbs
into light fixtures, preparing the remote control, and programming lighting
groups.

```

Topic

A topic is a standalone unit of information.

Usage information

XDITA	<topic>
HDITA	<article>
MDITA (core and extended profiles)	There is no specific syntax for topic in MDITA

Formatting expectations

When present, the content of the short description component is displayed as the first paragraph of a topic. It may also be used for other purposes, such as link previews and summaries.

Attributes

```
# Installing and Setting up Remote Lighting
```

```

Installation of your lighting kit includes installing the light bulbs
into light fixtures, preparing the remote control, and programming lighting
groups.

```

Topic metadata

Topic metadata is metadata that applies to a topic; this metadata is defined in a map.

Usage information

XDITA	<code><topicmeta></code>
HDITA	There is no explicit syntax for topic metadata in HDITA
MDITA (core and extended profiles)	There is no explicit syntax for topic metadata in MDITA

Formatting expectations

Attributes

[Link to table!](#)

XDITA example

The following example demonstrates the use of topic metadata in an XDITA map.

```

<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE map PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Map//EN" "lw-map.dtd">
<map id="remote-main">
  <topicmeta>

```

```

    <navtitle>Remote Lighting Network</navtitle>
  </topicmeta>
  <keydef keys="product-name">
    <topicmeta>
      <linktext>Remote Network Lighting</linktext>
    </topicmeta>
  </keydef>
</map>

```

Topic reference

A topic reference is the mechanism for referencing a topic (or another resource) from a DITA map. It can nest, which enables the expression of navigation and table-of-content hierarchies, as well as containment hierarchies and parent-child relationships.

Usage information

XDITA	<code><topicref></code>
HDITA	<code><a href></code> inside a <code></code>
MDITA (core and extended profiles)	<code>[link](/URI "title")</code> inside a list item

Formatting expectations

When present, the content of the short description component is displayed as the first paragraph of a topic. It may also be used for other purposes, such as link previews and summaries.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of a topic reference in an XDITA map.

```

<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE map PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Map//EN" "lw-map.dtd">
<map id="remote-main">
  <topicmeta>

      </ul>
    </li>
  </ul>
</nav>
</html>

```

MDITA example

The following example demonstrates the use of a topic reference in an MDITA map.

```

# Remote Lighting Network
- [Introduction] (introduction.md)
- [Alternative lighting setups] (alternatives.md)
  - [Low power installation] (low-power.md)
  - [High power installation] (high-power.md)

```

Track

Usage information

XDITA	<media-track> inside <audio> or <video>
HDITA	@track attribute on <audio> or <video>
MDITA (core and extended profiles)	There is no specific support in MDITA core profile. If needed, use an HDITA snippet.

Formatting expectations

When present, the content of the alternate text component is displayed as text for an image that references this component.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of track in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="sensei-promise">
  <title>The Sensei Sushi Promise</title>
  <body>
    <video>
      <desc>Video about the Sensei Sushi promise</desc>
      <video-poster value="sensei-video.jpg"/>
      <media-controls value="true"/>
      <media-autoplay value="false"/>
      <media-loop value="true"/>
      <media-muted value="true"/>
      <media-source value="sensei-video.mp4"/>
      <media-track value="sensei-video.vtt" type="captions"/>
    </video>
  </body>
</topic>
```

HDITA example

The following example demonstrates the use of track in an HDITA topic.

```
<!DOCTYPE html>
<title>The Sensei Sushi Promise</title>
<body>
  <article id="sensei-promise">
    <h1>The Sensei Sushi Promise</h1>
    <video title="Video about the Sensei Sushi promise" controls autoplay loop
muted poster="sensei-video.jpg">
      <source src="sensei-video.mp4"/>
      <track src="sensei-video.vtt" kind="captions"/>
    </video>
  </article>
</body>
```

Underline

An underline, also called an underscore, is a line immediately below a portion of text.

Usage information

XDITA <u>

HDITA <u>

MDITA (core and extended profiles) There is no specific support in MDITA core profile. If needed, use an HDITA snippet.

Formatting expectations

Content should be rendered with a typographical underline.

Processing expectations

In text, processors SHOULD render the contents of underline with a typographical underline. In audio and other rendering formats, processors MAY distinguish the contents of underline in some other way.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of *Underline* in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="install-and-setup">
  <title>Installing and Setting up Remote Lighting</title>
  <shortdesc>Installation of your <u>Remote Lighting Network</u> kit includes
installing the light bulbs into
  light fixtures, preparing the remote control, and programming lighting
groups.
  </shortdesc>
</topic>
```

HDITA example

The following example demonstrates the use of a short description in an HDITA topic.

```
<!DOCTYPE html>
<html>
<head>
<title>Installing and Setting up Remote Lighting</title>
</head>
<body>
  <article id="install-and-setup">
    <h1>Installing and Setting up Remote Lighting</h1>
    <p>Installation of your <u>Remote Lighting Network</u> kit includes
installing the light bulbs into light fixtures, preparing the remote control,
and programming lighting groups.</p>
  </article>
</body>
</html>
```

Unordered list

An unordered list is a list in which the order of items is not significant.

Usage information

XDITA	
HDITA	
MDITA (core and extended profiles)	See List item on page 22

Processing expectations

In text rendering, list item children of unordered list SHOULD be rendered as a typographical unordered list. Audio and other rendering formats MAY embellish the children of unordered list to signal that the list items are without inherent order.

Processors SHOULD consider the nesting level of the unordered list component in choosing the indentation level and list item label that is applied to list item children.

Attributes

Link to table!

XDITA example

The following example demonstrates the use of an unordered list in an XDITA topic.

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE topic PUBLIC "-//OASIS//DTD LIGHTWEIGHT DITA Topic//EN" "lw-
topic.dtd">
<topic id="franchise-offer">
  <title>What we offer</title>

Attributes in MDITA

With the exception of key reference, attributes are not available in the MDITA core profile. In an MDITA core-profile topic, a key reference is represented using the GitHub Flavored Markdown [syntax for shortcut reference links](#): [key-value]. There is no equivalent for content reference in the MDITA core profile.

In the MDITA extended profile, you can express attributes using their HDITA representation with HTML5 snippets.

Conformance

Authoring Tool Conformance

Specifies conformance requirements for Lightweight DITA (LwDITA) authoring tools.

The OASIS DITA Technical Committee designed LwDITA to be accessible to the largest possible set of content contributors. Hence, the conformance requirements for LwDITA authoring applications are intentionally minimally specified, particularly for the HDITA and MDITA authoring formats. Plain-text editors are considered viable tools for authoring HDITA and MDITA formats.

Conformance for XDITA authoring applications

An application that supports XDITA authoring *must*:

- Constrain the set of available elements and attributes to those defined by this specification, with no or minimal configuration required.
- Generate valid LwDITA topics.
- Support authors in authoring valid XDITA maps, to define sets of LwDITA (XDITA, HDITA, or MDITA) topics.

An application that supports XDITA authoring *may*:

- Support authors, possibly in a graphical user interface, in setting the @props filtering attribute.
- Support authors, possibly in a graphical user interface, in inserting valid content references.
- Show or preview representations of XDITA topics with content references resolved and filtering applied.
- keyref? authoring support preview?

Conformance for HDITA authoring applications

Text editors are considered viable authoring environments for HDITA. Any can create valid... (goal)? In order for LwDITA conformance specific... then... html5 conformant editor

Applications that support HDITA authoring *may*:

- Provide guided authoring for HDITA topics, by presenting HDITA components in valid order and number.
- Support authors in inserting valid HDITA components.
- Limit authors to HDITA components of HTML5, or flag components that, while valid according to the HTML spec, are not legal in HDITA topics. (must)
- Support authors in authoring HDITA maps to define sets of HDITA topics.

Conformance for MDITA authoring applications

Applications that support MDITA authoring *may*: in addition to being an Mdown editor..

- Provide guided authoring for MDITA topics, by presenting MDITA components in valid order and number.
- Support authors in inserting components from the MDITA extended profile, where necessary, to use Lightweight DITA features that are not available in the MDITA core profile.
- Limit authors to components of GitHub Flavored Markdown that are legal in MDITA core profile topics, or flag components that are not legal in MDITA topics.
- Support authors in authoring MDITA maps to define sets of MDITA topics.

Processing Tool Conformance

Specifies conformance requirements for tools that process Lightweight DITA content, typically for publishing or rendering, but possibly for other content-driven processes.

Processing tools that claim conformance to Lightweight DITA should meet the mandatory and optional requirements specified here with no, or only trivial, configuration.

Tools that process Lightweight DITA content *must*:

- Validate XDITA topic and map content, and report XDITA validation errors.
- Follow the Processing Expectations and Rendering Expectations sections of this specification for each Lightweight DITA component.
- Aggregate topic collections as defined by XDITA, MDITA, and HDITA maps, following the rules and limitations for each authoring format. Specifically, XDITA maps may aggregate XDITA, MDITA, and HDITA topics. MDITA maps need only aggregate MDITA topics. HDITA maps need only aggregate HDITA topics.

Tools that process Lightweight DITA *may*:

- Identify and report HDITA and MDITA components that do not comprise legal HDITA or MDITA content. Cessation of processing is an acceptable response when a processing tool encounters such content. However, processing tools are encouraged to attempt graceful degradation on encountering HDITA or MDITA topic or map content that does not conform to the rules of this specification.
