

DITA Technical Committee

Stage three: #164 Redesign <hazardstatement>

Table of contents

1 Stage three: #164 Redesign <hazardstatement>.....	3
---	---

1 Stage three: #164 Redesign <hazardstatement>

Redesign the hazard statement domain to better support current standards, authoring requirements, and rendering requirements.

Champion

Kristen James Eberlein, Eberlein Consulting LLC

Tracking information

Event	Date	Links
Stage 1 proposal accepted and moved to stage 2	20 August 2019	Minutes Note The minutes for the 20 August 2019 meeting are incomplete; they do not clearly identify issue #164 as the proposal moved to stage two and assigned to Kris Eberlein and Dawn Stevens.
Stage 2 proposal submitted	16 September 2019	DITA PDF
Stage 2 proposal discussed	17 September 2019	Minutes
Stage 2 proposal approved	01 October 2019	Minutes
Stage 3 proposal submitted to reviewers	01 October 2019	Bill Burns, Healthwise Eliot Kimber, Individual member
Stage 3 proposal (this document) submitted to TC	14 October 2019 Reviewed by: Deb Bissantz, Vasont Bill Burns, Healthwise	DITA PDF
Stage 3 proposal updated	15 October 2019 Incorporates review comments from Eliot Kimber, Individual member. Corrects a typo and uses @keyref to reference <hazardsymbol> in all examples.	DITA PDF

Approved technical requirements

- Restrict the values of the @type attribute on <hazardstatement> to "danger", "caution", "warning", "notice", and "-dita-use-conref-target"

- Require the @type attribute on <hazardstatement>
- Improve the element-reference topic for <hazardstatement> to include definitions of the values for the @type attribute that match those in the ANSI Z535.6 standard. The following definition descriptions are taken verbatim from ANSI Z535.6:

DANGER

Indicates a hazardous situation that, if not avoided, will result in death or serious injury. This signal word is to be limited to the most extreme situations.

WARNING

Indicates a hazardous situation that, if not avoided, could result in death or serious injury.

CAUTION

Indicates a hazardous situation that, if not avoided, could result in minor or moderate injury.

NOTICE

Indicates information considered important, but not hazard-related (e.g. messages relating to property damage).

Note that the DITA spec will not use these definitions verbatim. They will be edited to match our style guidelines.

- Expand the content model of <messagepanel> to enable greater flexibility in the order of the child elements. While <typeofhazard> will remain required and the first child of <messagepanel>, it now can be followed by either of the following:
 - <consequence> (zero or more), <howtoavoid> (one or more)
 - <howtoavoid> (one or more), <consequence> (zero or more)
- Expand the content model of <howtoavoid> to permit and , in addition to <sl>
- Change the specialization base of <messagepanel>, <typeofhazard>, <consequence>, and <howtoavoid> to <div>
- Add <hazardsymbol> to the content models of <messagepanel>, <typeofhazard>, <consequence>, and <howtoavoid>
- Remove <hazardsymbol> from the content model of <hazardstatement>

Dependencies or interrelated proposals

None

Modified grammar files

The following files must be modified:

- (DTD) hazardstatementDomain.mod
- (RNG) hazardstatementDomain.rng

In the content below, the following conventions are used:

- Bold is used to indicate code to be added, for example, **addition**.
- Line-through and red text is used to indicate code to be removed, for example, ~~removal~~.
- Ellipses (...) indicate where code is snipped for brevity.

Modified specification documentation

Note All numeric references here are to the DITA 2.0 specification, [working draft 11](#).

The following table contains precise suggestions for changes to be made to topics. Deletions are indicated with line through and red text, for example, ~~deletion~~.

Topic	DITA 2.0, working draft 11 content	New content
10.6.2.1 <consequence>	<p>Specialization hierarchy</p> <p>The <consequence> element is specialized from <u1>. It is defined in the hazard-statement domain module.</p>	<p>Specialization hierarchy</p> <p>The <consequence> element is specialized from <div>. It is defined in the hazard-statement domain module.</p>
10.6.2.2 <hazardstatement>	<p>Attributes</p> <p>The following attributes are available on this element: Universal attribute group and spectitle, and the attributes defined below.</p> <p>@type</p> <p>Describes the level of hazard. Safety hazard level definitions correspond to the same values in the ANSI Z535 and the ISO 3864 standards. Note that this differs from the @type attribute on many other DITA elements. See The type attribute for detailed information on supported values and processing implications. Available values are note, tip, fastpath, restriction, important, remember, attention, caution, notice, danger, warning, other, and dita-use-conref-target.</p> <p>@othertype</p> <p>Indicates an alternate note type, when the type is not available in the @type attribute value list. This value is used as the user-provided note title when the</p>	<p>Attributes</p> <p>The following attributes are available on this element: Universal attribute group and spectitle, and the attributes defined below.</p> <p>@type</p> <p>Indicates the level of hazard. The values correspond to the signal words defined by the ANSI Z535.6 standard:</p> <p>"caution"</p> <p>Indicates a hazardous situation that, if not avoided, could result in minor or moderate injury.</p> <p>"danger"</p> <p>Indicates a hazardous situation that, if not avoided, will result in death or serious injury. This signal word is to be limited to the most extreme situations.</p> <p>"notice"</p> <p>Indicates information considered important but</p>

Topic	DITA 2.0, working draft 11 content	New content
	@type attribute value is set to "other."	<p>not hazard-related, for example, messages relating to property damage.</p> <p>"warning" Indicates a hazardous situation that, if not avoided, could result in death or serious injury.</p> <p>"-dita-use-conref-target " See Using the -dita-use-conref-target value for more information.</p>
10.6.2.3 <hazardsymbol>	Not applicable	<p>Usage information</p> <p>When a <hazardsymbol> element is directly contained by <messagepanel>, the <hazardsymbol> is assumed to be associated with the <typeofhazard> element.</p>
10.6.2.4 <howtoavoid>	<p>Specialization hierarchy</p> <p>The <howtoavoid> element is specialized from <u1>. It is defined in the hazard-statement domain module.</p>	<p>Specialization hierarchy</p> <p>The <howtoavoid> element is specialized from <div>. It is defined in the hazard-statement domain module.</p>
10.6.2.5 <messagepanel>	<p>Specialization hierarchy</p> <p>The <messagepanel> element is specialized from <u1>. It is defined in the hazard-statement domain module.</p>	<p>Specialization hierarchy</p> <p>The <messagepanel> element is specialized from <div>. It is defined in the hazard-statement domain module.</p>
10.6.2.6 <typeofhazard>	<p>Specialization hierarchy</p> <p>The <typeofhazard> element is specialized from <u1>. It is defined in the hazard-statement domain module.</p>	<p>Specialization hierarchy</p> <p>The <typeofhazard> element is specialized from <div>. It is defined in the hazard-statement domain module.</p>

The following figures contain new content for the examples in the hazard-statement domain topics.

Figure 3: Changes to <consequence> example

In the following code sample, a hazard statement is assigned a "CAUTION" signal word. The hazard image is explicitly associated with the type of hazard.

```
<hazardstatement type="caution">
  <messagepanel>
    <typeofhazard>
      <hazardsymbol keyref="hazard-hotsurface"/>
      HOT SURFACES
    </typeofhazard>
```

```

    <consequence>Contact may cause a burn.</consequence>
    <howtoavoid>Wear gloves before servicing internal parts.</howtoavoid>
  </messagepanel>
</hazardstatement>

```

Figure 4: Changes to <hazardstatement> example

The following code sample defines a hazard statement with a signal word of "DANGER."

```

<hazardstatement type="danger">
  <messagepanel>
    <typeofhazard>
      <hazardsymbol keyref="hazard-rotatingblade"/>
      Rotating blade</typeofhazard>
      <consequence>Moving parts can crush and cut.</consequence>
      <howtoavoid>Follow lockout procedure before servicing.</howtoavoid>
    </messagepanel>
  </hazardstatement>

```

Figure 5: Changes to <hazardsymbol> example

The following code sample defines a hazard statement with a signal word of "DANGER." The <hazardsymbol> element is explicitly associated with the <typeofhazard> element.

```

<hazardstatement type="danger">
  <messagepanel>
    <typeofhazard>
      <hazardsymbol keyref="hazard-rotatingblade"/>
      Rotating blade</typeofhazard>
      <consequence>Moving parts can crush and cut.</consequence>
      <howtoavoid>Follow lockout procedure before servicing.</howtoavoid>
    </messagepanel>
  </hazardstatement>

```

In the following code sample, the <hazardsymbol> is contained by the <messagepanel> element. By default, this markup also associates the <hazardsymbol> element with the <typeofhazard> element. This markup can be useful when migrating hazard statements from earlier versions to DITA 2.0.

```

<hazardstatement type="danger">
  <messagepanel>
    <typeofhazard>Rotating blade</typeofhazard>
    <consequence>Moving parts can crush and cut.</consequence>
    <howtoavoid>Follow lockout procedure before servicing.</howtoavoid>
    <hazardsymbol keyref="hazard-rotatingblade"/>
  </messagepanel>
</hazardstatement>

```

Figure 6: Changes to <howtoavoid> example

The following code sample illustrates a hazard statement with the signal word of "NOTICE", which is reserved for situations that only involve possible property damage or other undesirable states. The <howtoavoid> element provides instructions about how to avoid the undesirable state.

```

<hazardstatement type="notice">
  <messagepanel>
    <typeofhazard>
      <hazardsymbol keyref="hazard-agressivesolvent"/>
      Machinery Damage</typeofhazard>
    <howtoavoid>
      <hazardsymbol keyref="hazard-readmanual"/>
      <ul>
        <li>Do NOT use solvents to clean the drum surface</sli>
        <li>Read manual for proper drum cleaning procedure</sli>
      </ul>
    </howtoavoid>
  </messagepanel>
</hazardstatement>

```

```
</messagepanel>
</hazardstatement>
```

Figure 7: Changes to <messagepanel> example

The following code sample generates an ANSI Z535.6 grouped safety message that specifies information about multiple hazards.

```
<hazardstatement type="warning">
  <messagepanel>
    <typeofhazard>
      <hazardsymbol keyref="hazard-electricshock"/>
      ELECTRIC SHOCK HAZARD</typeofhazard>
      <consequence>The equipment must be grounded. Improper grounding, setup, or usage of
        the system can cause electric shock
      </consequence>
      <howtoavoid>
        <hazardsymbol keyref="hazard-groundpowersource"/>
        <ul>
          <li>Turn off and disconnect power at main switch before disconnecting any
            cables or before servicing or installing any equipment.</li>
          <li>Connect only to grounded power sources.</li>
          <li>All electric wiring must be done by a qualified electrician and comply
            with all local codes and regulations.</li>
        </ul>
      </howtoavoid>
    </messagepanel>
    ...
    <messagepanel>
      <typeofhazard>
        <hazardsymbol keyref="hazard-hotshurface"/>
        BURN HAZARD</typeofhazard>
        <consequence>Electric surfaces and fluid can become very hot during
          operation.</consequence>
        <howtoavoid>
          To avoid burns:
          <ul>
            <li>Do not touch hot fluid or equipment.</li>
          </ul>
        </howtoavoid>
      </messagepanel>
    </hazardstatement>
```

Figure 8: Changes to <typeofhazard> example

The following code sample generate a "CAUTION" hazard statement, which warns users against lifting heavy objects without referring to the product safety manual.

```
<hazardstatement type="caution">
  <messagepanel>
    <typeofhazard>
      <hazardsymbol keyref="hazard-heavyobject"/>
      Lifting hazard
    </typeofhazard>
    <consequence>May result in injury.</consequence>
    <howtoavoid>See safety manual for lifting instructions.</howtoavoid>
  </messagepanel>
</hazardstatement>
```

Migration plans for backwards incompatibilities

This proposal contains three backwards-incompatible changes:

- Making the @type attribute on <hazardstatement> required
- Removal of certain values for the @type attribute on <hazardstatement>
- Removal of <hazardsymbol> from the content model of <hazardstatement>

While search or utilities can be used to locate <hazardstatement> elements that need to be migrated to DITA 2.0, the content and images referenced by the <hazardsymbol> element will need to be examined in order to determine how to rework the hazard statement for DITA 2.0.

The following table outlines a basic strategy for migrating existing hazard statements to DITA 2.0.

Backwards-incompatible change	Migration approach
<hazardstatement> elements without a @type attribute	<ol style="list-style-type: none"> 1. Search DITA source to locate <hazardstatement> elements that do not have a @type attribute. 2. If such elements exist, either assign a @type attribute or change the <hazardstatement> element to a <note>.
Removed values for @type on <hazardstatement>	<ol style="list-style-type: none"> 1. Search DITA source to determine if <hazardstatement> elements use any of the following values for the @type attribute: <ul style="list-style-type: none"> • fastpath • important • note • other • remember • restriction • tip 2. If any such elements are found, assess the hazard statement and do one of the following: <ul style="list-style-type: none"> • Change the value of the @type attribute on the <hazardstatement> element • Convert the <hazardstatement> element to a <note> element
<hazardsymbol> contained by <hazardstatement>	<ol style="list-style-type: none"> 1. Identify <hazardstatement> elements that contain <hazardsymbol> elements. 2. If such elements are found, move <hazardsymbol> elements into one of the following elements: <ul style="list-style-type: none"> • <consequence> • <howtoavoid> • <typeofhazard> • (Discouraged, except as an interim migration step) <messagepanel>

The following figures contain examples of DITA 1.3 and DITA 2.0 markup for the backwards-incompatible changes:

Figure 9: <hazardstatement> element without a @type attribute

The following code sample represents DITA 1.3 markup; it contains a <hazardstatement> element that lacks a @type attribute.

```
<hazardstatement>
  <messagepanel>
    <typeofhazard>GENERAL HAZARDS</typeofhazard>
    <howtoavoid>Before initializing the system, verify that all electrical, communications,
      and utility connections are secure.
    </howtoavoid>
```

```
</messagepanel>
</hazardstatement>
```

After examining the content, the information developer decides to recast it as a `<note>` for DITA 2.0:

```
<note type="other" othertype="GENERAL HAZARDS">
  <p>Before initializing the system, verify that all electrical, communications, and utility
    connections are secure.
  </p>
</note>
```

Figure 10: `<hazardstatement>` element with a `@type` attribute removed in DITA 2.0

The following code sample represents DITA 1.3 markup; it contains a `<hazardstatement>` element that uses a value for the `@type` attribute that is removed in DITA 2.0.

```
<hazardstatement type="restriction">
  <messagepanel>
    <typeofhazard>Lifting hazard</typeofhazard>
    <consequence>May result in injury.</consequence>
    <howtoavoid>See safety manual for lifting instructions.</howtoavoid>
  </messagepanel>
</hazardstatement>
```

After examining the content, the information developer decides that the content is appropriate for a hazard statement, and changes the value of the `@type` attribute to "caution".

```
<hazardstatement type="caution">
  <messagepanel>
    <typeofhazard>Lifting hazard</typeofhazard>
    <consequence>May result in injury.</consequence>
    <howtoavoid>See safety manual for lifting instructions.</howtoavoid>
  </messagepanel>
</hazardstatement>
```

Figure 11: `<hazardsymbol>` contained by `<hazardstatement>`

The following code sample represents DITA 1.3 markup; it contains a `<hazardstatement>` element that contains a `<hazardsymbol>` element.

```
<hazardstatement type="warning">
  <messagepanel>
    <typeofhazard>FLAMMABLE MATERIAL</typeofhazard>
    <consequence>Isopropyl Alcohol (IPA) vapors are flammable and can cause serious
      injury or death.
    </consequence>
    <howtoavoid>Remove ignition sources and do not use near heaters.</howtoavoid>
  </messagepanel>
  <hazardsymbol keyref="flammable-materials"/>
</hazardstatement>
```

The information developer reviews the image referenced by the `<hazardsymbol>` element, and decides that it represents the type of hazard. She modifies the markup as follows for DITA 2.0:

```
<hazardstatement type="warning">
  <messagepanel>
    <typeofhazard>
      <hazardsymbol keyref="flammable-materials"/>
      FLAMMABLE MATERIAL
    </typeofhazard>
    <consequence>Isopropyl Alcohol (IPA) vapors are flammable and can cause serious
      injury or death.
    </consequence>
    <howtoavoid>Remove ignition sources and do not use near heaters.</howtoavoid>
```

```
</messagepanel>  
</hazardstatement>
```

She also could have simply moved the `<hazardsymbol>` element into the `<messagepanel>` element:

```
<hazardstatement type="warning">  
  <messagepanel>  
    <typeofhazard>FLAMMABLE MATERIAL</typeofhazard>  
    <consequence>Isopropyl Alcohol (IPA) vapors are flammable and can cause serious  
      injury or death.  
    </consequence>  
    <howtoavoid>Remove ignition sources and do not use near heaters.</howtoavoid>  
    <b><hazardsymbol keyref="flammable-materials"/></b>  
  </messagepanel>  
</hazardstatement>
```
