

oasis-open/dita-specializations

About

OASIS TC Open Repository: This repository provides storage for DITA specializations that may be useful across the DITA user community, but are not officially maintained products of the OASIS DITA TC. In some cases, they were originally developed within the TC, but are no longer considered part of the official DITA specification.

README

This repository was created to provide a home for a number of specializations, originally created by the DITA TC, to address particular content challenges.

Initially, this repository contains the source for the following specializations:

1. Learning and training; this was previously delivered as Part 3 of the DITA standard
2. Machinery task; this was previously part of Technical Content, Part 2 of the standard
3. Task requirements; this was previous part of the machinery task.

Statement of Purpose

Statement of Purpose for this OASIS TC Open Repository (dita-specializations) as proposed [and approved by] the TC:

The repository manages the source code and supporting documentation for DITA specializations, which were added to the DITA standard during previous releases, but which, as of DITA 2.0, are no longer contained within the standard as distributed by the DITA TC. Because these specializations used to be within the standard, and are in use by some DITA users, it is felt that they should continue to be available.

[do we want to talk about how/if they will be maintained and kept in sync with upcoming releases?]

Maintainers

TC Open Repository Maintainers are responsible for oversight of this project's community development activities, including evaluation of GitHub pull requests and preserving open source principles of openness and fairness. Maintainers are recognized and trusted experts who serve to implement community goals and consensus design preferences.

Initially, the associated TC members have designated one or more persons to serve as Maintainer; subsequently, participating community members may select additional or substitute Maintainers, per consensus agreements.
