Proposed terms of submission for Code List Representation (Genericode) V1.0 OASIS Standard

a. The name of the submission requester

OASIS Code List Representation TC

b. The name of the intended receiving standards organization.

ISO/IEC JTC 1 Secretariat (suggesting SC 32 "Data management and interchange" as genericode includes a reference to Open-edi ISO/IEC 14662:2010 Information technology - Open-edi reference model)

c. The intended status or outcome that the request seeks from the receiving organization's process; and a short description of the receiving organization's approval process, including estimated time required, stages of approval and who votes at each stage.

Intended status: Advance Code List Representation (genericode) Version 1.0 OASIS Standard to an ISO/IEC International Standard

Base process: ISO/IEC JTC 1 PAS Transposition Process involving a Draft International Standard (DIS) ballot followed by a Ballot Resolution Meeting (BRM) (if there are comments during ballots), and potentially a Final DIS (FDIS) Ballot.

Stages of approval: https://www.iso.org/stage-codes.html - Stage 40

d. An explanation of how the submission will benefit OASIS.

Advancing Code List Representation (genericode) Version 1.0 to an international standard draws international attention to the work done by OASIS and to the organization itself, and governments/regulators may be more inclined to use the standard because of its ISO/IEC status.

This will help nurture and expand the ongoing liaisons with ISO/IEC JTC 1.

Further, this submission will help maintain OASIS in good standing as a recognized ISO/IEC JTC 1 PAS submitter organization.

e. The expected licensing, copyright and other intellectual property terms that will be used by the receiving organization in regards to the submission.

ISO/IEC JTC 1 will expect that OASIS will abide by the ISO/IEC/ITU-T Common Patent Policy (indicated by at least notifying ISO/IEC of any patent declarations in the required Explanatory

Report) and will provide ISO/IEC with sufficient copyright license to modify and publish the resulting ISO/IEC Standard.

The TC offers publication of the standard on the condition that it's not changed otherwise.

f. A statement of the intended future plan for versioning and maintenance of the OASIS Standard and/or Approved Errata for that standard, and the expected roles of OASIS and the receiving organization. This must include clear statements of the rules of the receiving organization applicable to maintenance of an approved submitted standard, and to future versions of that standard; any requirements regarding the submission of future versions; and a description of how OASIS and the submission requesters expect to comply with those rules.

The OASIS Code List Representation Technical Committee will continue to maintain the Code List Representation (genericode) Version 1.0 OASIS Standard and produce future revisions of it.

For this specific submission (Code List Representation (genericode) Version 1.0 OASIS Standard) to ISO/IEC JTC 1, OASIS will request to be named the "JTC 1 designated maintenance group" and will follow the required maintenance procedures (including Systematic Review).

In the course of time, if there are substantive changes to Code List Representation (genericode) Version 1.0 (either via the Approved Errata process or through a new version), OASIS may submit the modified document (or future version) to ISO/IEC JTC 1 at some point in the future.
