255	DOCUMENT HISTORY .....	122
256		
257		

## 257 **Purpose**

258 This document catalogs issues for the Security Assertions Markup Language (SAML) developed  
259 the Oasis Security Services Technical Committee.

## 260 **Special Note for Version 12**

261 This version of the Issues List contains no open issues. It reflects the state as of the official  
262 acceptance of the TC of SAML version 1.0. A future version of this document will re-open all  
263 deferred issues.

## 264 **Introduction**

265 The issues list presented here documents issues brought up in response to draft documents as  
266 well as other issues mentioned on the security-use and security mailing lists, in conference calls,  
267 and in other venues.

268 Each issue is formatted according to the proposal of David Orchard to the general committee:

269 ISSUE:[Document/Section Abbreviation-Issue Number: Short name] Issue long description.  
270 Possible resolutions, with optional editor resolution Decision

271 The issues are informally grouped according to general areas of concern. For this document, the  
272 "Issue Number" is given as "#-##", where the first number is the number of the issue group.

273 Issues on this list were initially captured from meetings of the Use Cases subcommittee or from  
274 the security-use mailing list. They were refined to a voteable form by issue champions within the  
275 subcommittee, reviewed for clarity, and then voted on by the subcommittee. To achieve a higher  
276 level of consensus, each issue required a 75% super-majority of votes to be resolved. Here, the  
277 75% number is of votes counted; abstentions or failure to vote by a subcommittee member did  
278 not affect the percentage.

279 At the second face-to-face meeting it was agreed to close all open issues relating to Use Cases  
280 and requirements accepting the findings of the sub committee, with the exception of issues that  
281 were specifically selected to remain open. This has been interpreted to mean that:

- 282 • Issues that received a consensus vote by the committee were settled as indicated.
- 283 • Issues that did not achieve consensus were settled by selecting the “do not add” option.

284 To make reading this document easier, the following convention has been adopted for shading  
285 sections in various colors.

286 **Gray is used to indicate issues that were previously closed or deferred.**

287 Blue is used to indicate issues that have just been closed or deferred in the most recent revision

288 Yellow is used to indicated issues which have recently been created or modified or are actively  
289 being debated.

290 Other open issues are not marked, i.e. left white.

291 Beginning with version 5 of this document, issues with lengthy write-ups, that have been closed  
292 “for some time” will be removed from this document, in order to reduce its overall size. The  
293 headings, a short description and resolution will be retained. All vote summaries from closed  
294 issues have also been removed.

295

## 295 Use Case Issues

### 296 Group 0: Document Format & Strategy

297 CLOSED ISSUE:[UC-0-01:MergeUseCases]

298 There are several use case scenarios in the Straw Man 1 that overlap in purpose. For example,  
299 there are several single sign-on scenarios. Should these be merged into a single use case, or  
300 should the multiplicity of scenarios be preserved?

301 Possible Resolutions:

- 302 1. Merge similar use case scenarios into a few high-level use cases, illustrated with UML  
303 use case diagrams. Preserve the detailed use case scenarios, illustrated with UML  
304 interaction diagrams. This allows casual readers to grasp quickly the scope of SAML,  
305 while keeping details of expected use of SAML in the document for other subcommittees  
306 to use.
- 307 2. Merge similar use case scenarios, leave out detailed scenarios.

308 Status: Closed, resolution 2 carries.

309 CLOSED ISSUE:[UC-0-02:Terminology]

310 Several subcommittee members have found the current document, and particularly the use case  
311 scenario diagrams, confusing in that they use either domain-specific terminology (e.g., "Web  
312 User", "Buyer") or vague, undefined terms (e.g., "Security Service.").

313 One proposal is to replace all such terms with a standard actor naming scheme, suggested by Hal  
314 Lockhart and adapted by Bob Morgan, as follows:

- 315 1. User
- 316 2. Authn Authority
- 317 3. Authz Authority
- 318 4. Policy Decision Point (PDP)
- 319 5. Policy Enforcement Point (PEP)

320 A counter-argument is that abstraction at this level is the point of design and not of requirements  
321 analysis. In particular, the real-world naming of actors in use cases makes for a more concrete  
322 goal for other subcommittees to measure against.

323 Another proposal is, for each use case scenario, to add a section that maps the players in the  
324 scenario to one or more of the actors called out above.

325 Possible Resolutions:

- 326 1. Replace domain-specific or vague terms with standard vocabulary above.
- 327 2. Map domain-specific or vague terms to standard vocabulary above for each use-case and  
328 scenario.
- 329 3. Don't make global changes based on this issue.

330 Status: Closed, resolution 3 carries

331 CLOSED ISSUE:[UC-0-03:Arrows]

332 Another problem brought up is that the use case scenarios have messages (arrow) between  
333 actors, but not much detail about the actual payload of the arrows. Although this document is  
334 intended for a high level of analysis, it has been suggested that more definite data flow in the  
335 interaction diagrams would make them clearer.

336 UC-1-08:AuthZAttrs, UC-1-09:AuthZDecisions, and UC-1-11:AuthNEvents all address this  
337 question to some degree, but this issue is added to state for a general editorial principle for the  
338 document.

339 Possible Resolutions:

- 340 1. Edit interaction diagrams to give more fine-grained detail and exact payloads of each  
341 message between players.
- 342 2. Don't make global changes based on this issue.

343 Status: Closed, resolution 2 carries.

344

344 **Group 1: Single Sign-on Push and Pull Variations**

345 CLOSED ISSUE:[UC-1-01:Shibboleth]

346 The Shibboleth security system for Internet 2  
347 (<http://middleware.internet2.edu/shibboleth/index.shtml>) is closely related to the SAML effort.

348 **[Text Removed to Archive]**

349 If these issues, along with the straw man 2 document, have addressed the requirements of  
350 Shibboleth, then the subcommittee can address each issue on its own, rather than Shibboleth as a  
351 monolithic problem.

352 Possible Resolutions:

- 353 1. The above list of issues, combined with the straw man 2 document, address the  
354 requirements of Shibboleth, and no further investigation of Shibboleth is necessary.
- 355 2. Additional investigation of Shibboleth requirements are needed.

356 Status: Closed per F2F #2, Resolution 1 Carries

357 CLOSED ISSUE:[UC-1-02:ThirdParty]

358 Use case scenario 3 (single sign-on, third party) describes a scenario in which a Web user logs in  
359 to a particular 3rd-party security provider which returns an authentication reference that can be  
360 used to access multiple destination Web sites. Is this different than Use case scenario 1 (single  
361 sign-on, pull model)? If not, should it be removed from the use case and requirements document?

362 **[Text Removed to Archive]**

363 Possible Resolutions:

- 364 1. Edit the current third-party use case scenario to feature passing a third-party  
365 authentication assertion from one destination site to another.
- 366 2. Remove the third-party use case scenario entirely.

367 Status: Closed per F2F #2, Resolution 1 Carries

368 CLOSED ISSUE:[UC-1-03:ThirdPartyDoable]

369 Questions have arisen whether use case scenario 3 is doable with current Web browser  
370 technology. An alternative is using a Microsoft Passport-like architecture or scenario.

371 **[Text Removed to Archive]**

372 Possible Resolutions:

- 373 1. The use case scenario should be removed because it is unimplementable.
- 374 2. The use case scenario is implementable, and whether it should stay in the document or  
375 not should be decided based on other factors.

376 Status: Closed per F2F #2, Resolution 2 Carries

377 CLOSED ISSUE:[UC-1-04:ARundgrenPush]

378 Anders Rundgren has proposed on security-use an alternative to use case scenario 2 (single sign-  
379 on, push model). The particular variation is that the source Web site requests an authorization  
380 profile for a resource (e.g., the credentials necessary to access the resource) before requesting  
381 access.

382 **[Text Removed to Archive]**

383 Possible Resolutions:

- 384 1. Use this variation to replace scenario 2 in the use case document.
- 385 2. Add this variation as an additional scenario in the use case document.
- 386 3. Do not add this use case scenario to the use case document.

387 Status: Closed per F2F #2 3 carries

388 DEFERRED ISSUE:[UC-1-05:FirstContact]

389 A variation on the single sign on use case that has been proposed is one where the Web user goes  
390 directly to the destination Web site without authenticating with a definitive authority first.

391 **[Text Removed to Archive]**

392 Possible Resolutions:

- 393 1. Add this use case scenario to the use case document.
- 394 2. Do not add this use case scenario to the use case document.

395 Status: Deferred by vote on Jan 29, 2002. Discussions at F2F#4 established that SAML 1.0  
396 partially meets this requirement, but does not provide everything TC members could envisage.

397 CLOSED ISSUE:[UC-1-06:Anonymity]

398 What part does anonymity play in SAML conversations? Can assertions be for anonymous

399 parties? Here, "anonymous" means that an assertion about a principal does not include an  
400 attribute uniquely identifying the principal (ex: user name, distinguished name, etc.).

401 A requirement for anonymity would state:

402 [CR-1-06-Anonymity] SAML will allow assertions to be made about anonymous  
403 principals, where "anonymous" means that an assertion about a principal does not include  
404 an attribute uniquely identifying the principal (ex: user name, distinguished name, etc.).

405 Possible Resolutions:

- 406 1. Add this requirement to the use case and requirement document.  
407 2. Do not add this requirement.

408 Status: Closed per F2F #2, Resolution 1 Carries

409 CLOSED ISSUE:[UC-1-07:Pseudonymity]

410 What part do pseudonyms play in SAML conversations? Can assertions be made about  
411 principals using pseudonyms? Here, a pseudonym is an attribute in an assertion that identifies the  
412 principal, but is not the identifier used in the principal's home domain.

413 A requirement for pseudonymity would state:

414 [CR-1-07-Pseudonymity] SAML will allow assertions to be made about principals using  
415 pseudonyms for identifiers.

416 Possible Resolutions:

- 417 1. Add this requirement to the use case and requirement document.  
418 2. Do not add this requirement.

419 Status: Closed per F2F #2, Resolution 1 Carries

420 CLOSED ISSUE:[UC-1-08:AuthZAttrs]

421 It's been pointed out that the concept of an "authentication document" used in the use case and  
422 requirements document does not clearly specify the inclusion of authz attributes. Here, authz  
423 attributes are attributes of a principal that are used to make authz decisions, e.g. an identifier, or  
424 group or role membership.

425 Since authz attributes are important and are required by [R-AuthZ], it has been suggested that the  
426 single sign-on use case scenarios specify when authz assertions are passed between actors.

427 Possible Resolutions:

- 428 1. Edit the use case scenarios to specify passing authz attributes with authentication  
429 documents.
- 430 2. Do not specify the passing of authz attributes in the use case scenarios.

431 Status: Closed per F2F #2, Resolution 1 Carries

432 CLOSED ISSUE:[UC-1-09:AuthZDecisions]

433 The current use case and requirements document mentions "Access Authorization" and "Access  
434 Authorization References." In particular, this data is a record of a authorization decision made  
435 about a particular principal performing a particular action on a particular resource.

436 It would be more clear to label this data as "AuthZ Decision Documents" to differentiate from  
437 other AuthZ data, such as AuthZ attributes or AuthZ policy. To this point, the mentions of  
438 "access authorization" would be changed, and a new requirement would be added as follows:

439 [CR-1-09-AuthZDecision] SAML should define a data format for recording authorization  
440 decisions.

441 Possible Resolutions:

- 442 1. Edit the use case scenarios to use the term "authz decision" and add the [CR-1-09-  
443 AuthZDecision] requirement.
- 444 2. Do not make these changes.

445 Status: Closed per F2F #2, Resolution 1 Carries

446 CLOSED ISSUE:[UC-1-10:UnknownParty]

447 The current straw man 2 document does not have a use case scenario for exchanging data  
448 between security services that are previously unknown to each other. For example, a relying  
449 party may choose to trust assertions made by an asserting party based on the signatures on the  
450 AP's digital certificate, or through other means.

451 [Text Removed to Archive]

452 Possible Resolutions:

- 453 1. Add this use case scenario to the use case document.
- 454 2. Do not add this use case scenario to the use case document.

455 Status: Closed per F2F #2, Resolution 2 Carries

456 CLOSED ISSUE:[UC-1-11:AuthNEvents]

457 It is not specified in straw man 2 what authentication information is passed between parties. In  
458 particular, specific information about authn events, such as time of authn and authn protocol are  
459 alluded to but not specifically called out.

460 The use case scenarios would be edited to show when information about authn events would be  
461 transferred, and the requirement for authn data would be edited to say:

462 [CR-1-11-AuthN] SAML should define a data format for authentication assertions,  
463 including descriptions of authentication events.

464 Possible Resolutions:

- 465 1. Edit the use case scenarios to specifically define when authn event descriptions are  
466 transferred, and edit the R-AuthN requirement.
- 467 2. Do not change the use case scenarios or R-AuthN requirement.

468 Status: Closed per F2F #2, Resolution 1 Carries

469 CLOSED ISSUE:[UC-1-12:SignOnService]

470 Bob Morgan suggests changing the title of use case 1, "Single Sign-on," to "Sign-on Service."

471 Possible Resolutions:

- 472 1. Make this change to the document.
- 473 2. Don't make this change.

474 Status: Closed per F2F #2, 2 carries

475 CLOSED ISSUE:[UC-1-13:ProxyModel]

476 Irving Reid suggests an additional use case scenario for single sign-on, based on proxies.

477 [Text Removed to Archive]

478 Possible Resolutions:

- 479 1. Add this use case scenario to the document.
- 480 2. Don't make this change.

481 Status: Closed by explicit vote at F2F #2, 2 carries, however see UC-1-14

482 DEFERRED ISSUE:[UC-1-14: NoPassThruAuthnImpactsPEP2PDP]

483 Stephen Farrell has argued that dropping PassThruAuthN prevents standardization of important  
484 functionality in a commonly used configuration.

485 The counter argument is the technical difficulty of implementing this capability, especially when  
486 both username/password and PKI AuthN must be supported.

487 Possible Resolutions:

488 1. Add this requirement to SAML 1.0

489 2. authorize a subgroup/task force to evaluate a suitable pass-through authN solution for  
490 eventual inclusion in V.next of SAML. If the TC likes the design once it is presented, it  
491 may choose to open up its scope to once again include pass-through authN in V1.0.  
492 Stephen is willing to champion this."

493 3. Do not add this requirement.

494 Status: Deferred by vote on Feb 5, 2002 – Previously closed on May 15 telcon, 2 carries

495

## 495 **Group 2: B2B Scenario Variations**

### 496 **CLOSED ISSUE:[UC-2-01:AddPolicyAssertions]**

497 Some use cases proposed on the security-use list (but not in the straw man 1 document) use a  
498 concept of a "policy document." In concept a policy document is a statement of policy about a  
499 particular resource, such as that user "evanp" is granted "execute" privileges on file  
500 "/usr/bin/emacs." Another example may be that all users in domain "Acme.com" with role  
501 "backup administrator" may perform the "shutdown" method on resource "mail server," during  
502 non-business hours.

503 Use cases where policy documents are exchanged, and especially activities like security  
504 discovery as in UC-4-04:SecurityDiscovery, would require this type of assertion. If these use  
505 cases and/or services were adapted, the term "policy document" should be used. In addition, the  
506 following requirement would be added:

507 **[CR-2-01-Policy]** SAML should define a data format for security policy about resources.

508 In addition, the explicit non-goal for authorization policy would be removed.

509 Another thing to consider is that the intended XACML group within Oasis is planning on  
510 working on defining a policy markup language in XML, and any work we do here could very  
511 well be redundant.

512 Possible Resolutions:

- 513 1. Remove the non-goal, add this requirement, and refer to data in this format as "policy  
514 documents."
- 515 2. Maintain the non-goal, leave out the requirement.

516 Status: Closed per F2F #2, Resolution 1 Carries

### 517 **CLOSED ISSUE:[UC-2-02:OutsourcedManagement]**

518 A use case scenario provided by Hewlett Packard illustrates using SAML enveloped in a  
519 CIM/XML request. Should this scenario be included in the use case document?

520 **[Text Removed to Archive]**

521 Potential Resolutions:

- 522 1. Add this use-case scenario to the document.
- 523 2. Do not add this use-case scenario.

524 Status: Closed per F2F #2, 2 carries

525 CLOSED ISSUE:[UC-2-03:ASP]

526 A use case scenario provided by Hewlett Packard illustrates using SAML for a secure interaction  
527 between an application service provider (ASP) and a client. Should this scenario be included in  
528 the use case document?

529 **[Text Removed to Archive]**

530 Potential Resolutions:

- 531 1. Add this use-case scenario to the document.
- 532 2. Do not add this use-case scenario.

533 Status: Closed per F2F #2, 2 carries

534 DEFERRED ISSUE:[UC-2-05:EMarketplace]

535 Zahid Ahmed proposes the following additional use case scenario for inclusion in the use case  
536 and requirements document.

537 Scenario X: E-Marketplace

538 **[Text Removed to Archive]**

539 Possible Resolutions:

- 540 1. The above scenario should be added to the use cases document.
- 541 2. The above scenario should not be added to the document.

542 Status: Deferred by vote on Jan 29, 2002. This functionality is not directly supported by SAML  
543 1.0 Bindings and Profiles, but could be constructed using the current core.

544 CLOSED ISSUE:[UC-2-06:EMarketplaceDifferentProtocol]

545 Zahid Ahmed has proposed that the following use case scenario be added to the use case and  
546 requirements document.

547 **[Text Removed to Archive]**

548 Possible Resolutions:

- 549 1. Add this scenario to the document.
- 550 2. This use case scenario should not be added to the document.

551 Status: Closed per F2F #2, 2 carries

552 CLOSED ISSUE:[UC-2-07:MultipleEMarketplace]

553 Zahid Ahmed proposes the following use case scenario for inclusion in the document. This use  
554 case/issue is a variant of ISSUE# [UC-2-05].

555 **[Text Removed to Archive]**

556 Possible Resolutions:

557 1. Add this scenario to the document.

558 2. The above scenario should not be added to the document.

559 Status: Closed per F2F #2, 2 carries

560 CLOSED ISSUE:[UC-2-08:ebXML]

561 Maryann Hondo proposed this use case scenario for inclusion in the use case document

562 **[Text Removed to Archive].**

563 Potential Resolutions:

564 1. Add this use case scenario to the use case and requirements document.

565 2. Do not add this scenario.

566 Status: Closed per F2F #2, 2 carries

567

568

568 **Group 3: Sessions**

569 [At F2F #2, it was agreed to charter a sub group to “do the prep work to ensure that  
570 logout, timein, and timeout will not be precluded from working with SAML later; commit  
571 to doing these other pieces "next" after 1.0.” Therefore all the items in this section have  
572 been closed with the notation “referred to sub group.”]

573 The purpose of the issues/resolutions in this group is to provide guidance to the rest of the TC as  
574 to the functionality required related to sessions. Some of the scenarios contain some detail about  
575 the messages which are transferred between parties, but the intention is not to require a particular  
576 protocol. Instead, these details are offered as a way of describing the functionality required. It  
577 would be perfectly acceptable if the resulting specification used different messages to  
578 accomplish the same functionality.

579 DEFERRED ISSUE:[UC-3-01:UserSession]

580 Should the use cases of log-off and timeout be supported

581 [Text Removed to Archive].

582 Possible Resolutions:

- 583 1. Add this requirement and/or use cases to SAML.  
584 2. Do not add this requirement and/or use cases.

585 Status: Deferred by vote on Feb 5, 2002

586 DEFERRED ISSUE:[UC-3-02:ConversationSession]

587 Is the concept of a session between security authorities separate from the concept of a user  
588 session? If so, should use case scenarios or requirements supporting security system sessions be  
589 supported? [DavidO: I don't understand this issue, but I have left in for backwards  
590 compatibility]. [DarrenP: I think this issue arose out of a misunderstanding/miscommunication  
591 on the mailing list and has been resolved. This is more of a formality to vote this one to a closed  
592 status.]

593 Possible Resolutions:

- 594 1. Do not pursue this requirement as it is not in scope.  
595 2. Do further analysis on this requirement to determine what it is specifically.

596 Status: Deferred by vote on Feb 5, 2002

597 DEFERRED ISSUE:[UC-3-03:Logout]

598 Should SAML support transfer of information about application-level logouts (e.g., a principal  
599 intentionally ending a session) from the application to the Session Authority ?

600 Candidate Requirement:

601 [CR-3-3-Logout] SAML shall support a message format to indicate the end of an  
602 application-level session due to logout by the principal.

603 Note that this requirement is implied by Scenario 1-3 (the second scenario 1-3 in straw man 3 -  
604 oops). This issue seeks to clarify the document by making the requirement explicit.

605 Possible Resolutions:

- 606 1. Add this requirement to SAML.
- 607 2. Do not add this requirement to SAML.

608 Status: Deferred by vote on Feb 5, 2002

609 DEFERRED ISSUE:[UC-3-05:SessionTermination]

610 For managing a SAML User Sessions, it may be useful to have a way to indicate that the SAML-  
611 level session is no longer valid. The logout requirement would invalidate a session based on user  
612 input. This requirement, for termination, would invalidate the SAML-level session based on  
613 other factors, such as when the user has not used any of the SAML-level sessions constituent  
614 application- level sessions for more than a set amount of time. Timeout would be an example of  
615 a session termination.

616 Candidate requirement:

617 [CR-3-5-SessionTermination] SAML shall support a message format for timeout of a  
618 SAML-level session. Here, "termination" is defined as the ending of a SAML-level  
619 session by a security system not based on user input. For example, if the user has not  
620 used any of the application-level sub-sessions for a set amount of time, the session may  
621 be considered "timed out."

622 Note that this requirement is implied by Scenario 1-3, figure 6, specifically the last message  
623 labeled 'optionally delete/revoke session'. This issue seeks to clarify the document by making the  
624 requirement explicit.

625 Possible Resolutions:

- 626 1. Add this requirement to SAML.
- 627 2. Do not add this requirement and/or use cases.

628 Status: Deferred by vote on Feb 5, 2002

629 DEFERRED ISSUE:[UC-3-06:DestinationLogout]

630 Should logging out of an individual application-level session be supported? Advantage: allows  
631 application Web sites control over their local domain consistent with the model most widely  
632 implemented on the web. Disadvantage: potentially more interactions between the application  
633 and the Session Authority.

634 **[Text Removed to Archive]**

635 Possible Resolutions:

636 1. Add this scenario and requirement to SAML.

637 2. Do not add this scenario or requirement.

638 Status: Deferred by vote on Feb 5, 2002

639 DEFERRED ISSUE:[UC-3-07:Logout Extent]

640 What is the impact of logging out at a destination web site?

641 Possible Resolution:

642 1. Logout from destination web site is local to destination [DavidO recommendation]

643 2. Logout from destination web site is global, that is destination + source web sites.

644 Status: Deferred by vote on Feb 5, 2002

645 DEFERRED ISSUE:[UC-3-08:DestinationSessionTermination]

646 Having the Session Authority determine the timeout of a session is covered under [UC-3-5]. This  
647 issue covers the manner and extent to which systems participating in that session can initiate and  
648 control the timeout of their own sessions.

649 **[Text Removed to Archive].**

650 Possible Resolutions:

651 1. Add this scenario and requirement to SAML.

652 2. Do not add this scenario or requirement.

653 Status: Deferred by vote on Feb 5, 2002

654 DEFERRED ISSUE:[UC-3-09:Destination-Time-In]

655 In this scenario, a user has traveled from the source site (site of initial login) to some destination  
656 site. The source site has set a maximum idle-time limit for the user session, based on user  
657 activity at the source or destination site. The user stays at the destination site for a period longer  
658 than the source site idle-time limit; and at that point the user returns to the source site. We do not  
659 wish to have the user time-out at the source site and be re-challenged for authentication; instead,  
660 the user should continue to enjoy the original session which would somehow be cognizant of  
661 user activity at the destination site.

662 Candidate Requirement:

663 [CR-3-9:Destination-TimeIn] SAML shall support destination system time-in.

664 Possible Resolutions:

- 665 1. Add this scenario and requirement to SAML.
- 666 2. Do not add this scenario or requirement to SAML.

667 Status: Deferred by vote on Feb 5, 2002

668

## 668 **Group 4: Security Services**

669 CLOSED ISSUE:[UC-4-01:SecurityService]

670 Should part of the use case document be a definition of a security service? What is a security  
671 service and how is it defined?

672 Potential Resolutions:

- 673 1. This issue is now obsolete and can be closed as several securityservices (shared  
674 sessioning, PDP--PEP relationship) have been identified within SAML.
- 675 2. This issue should be kept open.

676 Status: Closed per F2F #2, 1 carries

677 CLOSED ISSUE:[UC-4-02:AttributeAuthority]

678 Should a concept of an attribute authority be introduced into the [SAML] use case document?  
679 What part does it play? Should it be added in to an existing use case scenario, or be developed  
680 into its own scenario?

681 The "attribute authority" terminology has already been introduced in the Hal/David diagrams and  
682 discussed by the use-case group. So this issue can be viewed as requiring more detail concerning  
683 the flows derived from the diagram to be introduced into the use-case document.

684 The following use-case scenario is offered as an instance:

685 (a) User authenticates and obtains an AuthN assertion. (b) User or server submits the AuthN  
686 assertion to an attribute authority and in response obtains an AuthZ assertion containing  
687 authorization attributes.

688 Potential Resolutions:

- 689 1. A use-case or use-case scenario similar to that described above should be added to  
690 SAML.
- 691 2. This issue is adequately addressed by existing use cases and does not require further  
692 elaboration within SAML.

693 Status: Closed per F2F #2, Resolution 2 Carries

694 CLOSED ISSUE:[UC-4-03:PrivateKeyHost]

695 A concept taken from S2ML. A user may allow a server to host a private key. A credentials field  
696 within an AuthN assertion identifies the server that holds the key. Should this concept be

697 introduced into the [SAML] use case document? As a requirement? As part of an existing use  
698 case scenario, or as its own scenario?

699 The S2ML use-case scenario had the following steps:

- 700 1. User Jane (without public/private key pair) authenticates utilizing a trusted server X and  
701 receives an AuthN assertion. The trusted server holds a private/public key pair. The  
702 AuthN assertion received by Jane includes a field for the server X's public key.
- 703 2. User submits a business payload and said AuthN assertion to trusted server X. The  
704 trusted server "binds" the assertion to the payload using some form of digital signing and  
705 sends the composite package onto the next stage in the business flow.

706 Potential Resolutions:

- 707 1. A use-case or use-case scenario comprising steps 1 and 2 above should be added to the  
708 use-case document.
- 709 2. A requirement for supporting "binding" between AuthN assertions and business payloads  
710 thru digital signature be added to the use-case document.
- 711 3. This issue has been adequately addressed elsewhere; there is no need for any additions to  
712 the use-case document.

713 Status: Closed per F2F #2, Resolution 2 Carries

714 CLOSED ISSUE:[UC-4-04:SecurityDiscover]

715 UC-1-04:ARundgrenPush describes a single sign-on scenario that would require transfer of  
716 authorization data about a resource between security zones. Should a service for security  
717 discovery be part of the [SAML] standard?

718 Possible Resolutions:

- 719 1. Yes, a service could be provided to send authorization data about a service between  
720 security zones. This would require some sort of policy assertions (UC-2-  
721 01:AddPolicyAssertions).
- 722 2. No, this extends the scope of [SAML] too far. AuthZ in [SAML] should be concerned  
723 with AuthZ attributes of a principal, not of resources.

724 Status: Closed per F2F #2, Resolution 2 Carries

725

725 **Group 5: AuthN Protocols**

726 CLOSED ISSUE:[UC-5-01:AuthNProtocol]

727 Straw Man 1 explicitly makes challenge-response authentication a non-goal. Is specifying which  
728 types of authn are allowed and what protocols they can use necessary for this document? If so,  
729 what types and which protocols?

730 **[Text Removed to Archive]**

731 Possible Resolutions (not mutually exclusive):

732 1. The Non-Goal

733 "Challenge-response authentication protocols are outside the scope of the  
734 SAML"

735 should be removed from the Strawman 3 document.

736 2. The following requirements should be added to the Strawman 3 document:

737 [CR-5-01-1-StandardCreds] SAML should provide a data format for  
738 credentials including those based on name-password, X509v3 certificates,  
739 public keys, X509 Distinguished name, and empty credentials.

740 [CR-5-01-2-ExtensibleCreds] SAML The credentials data format must  
741 support extensibility in a structured fashion.

742 Status: Closed per F2F #2, 1 is not removed, 2 is not added, but see UC-1-14

743 DEFERRED ISSUE:[UC-5-02:SASL]

744 Is there a need to develop materials within SAML that explore its relationship to SASL [SASL]?

745 Possible Resolutions:

746 1. Yes

747 2. No

748 Status: Deferred by vote on Feb 5, 2002 – was previously closed per F2F #2, 2 carries

749 CLOSED ISSUE:[UC-5-03:AuthNThrough]

750 All the scenarios in Straw Man 1 presume that the user provides authentication credentials  
751 (password, certificate, biometric, etc) to the authentication system out-of-band.

752 Possible Resolutions (not mutually exclusive):

- 753 1. Should SAML be used directly for authentication? In other words should the SAML  
754 model or express one or more authentication methods or a framework for authentication?
- 755 2. Should this be explicitly stated as a non-goal?
- 756 3. Should the following statement be added to the non-goals section?

757 [NO-Authn] Authentication methods or frameworks are outside the scope  
758 of SAML.

759 Status: Closed per F2F #2, Resolution 1 Fails, Resolution 2 Passes, Resolution 3 Fails

760

## 760 **Group 6: Protocol Bindings**

761 CLOSED ISSUE:[UC-6-01:XMLProtocol]

762 Should mention of a SOAP binding in the use case and requirements document be changed to a  
763 say "an XML protocol" (lower case, implying generic XML-based protocols)? Or "XML  
764 Protocol", the specific W3 RPC-like protocol using XML (<http://www.w3.org/2000/xp/>)?

765 Although SOAP is being reworked in favor of XP, the current state of XML Protocol is  
766 unknown. Requiring a binding to that protocol by June may not be feasible.

767 Per David Orchard, "There is no such deliverable as XML Protocol specification. We don't know  
768 when an XMLP 1.0 spec will ship. We can NEVER have forward references in specifications.  
769 When XMLP ships, we can easily change the requirements. [...] I definitely think we should  
770 mandate a SOAP 1.1 binding."

771 Possible Resolutions:

- 772 1. Change requirement for binding to SOAP to binding to XML Protocol.
- 773 2. Leave current binding to SOAP.
- 774 3. Remove mention of binding to either of these protocols.

775 Status: Closed per F2F #2, Resolution 2 Carries

776

## 776 **Group 7: Enveloping vs. Enveloped**

777 CLOSED ISSUE:[UC-7-01:Enveloping]

778 SAML data will be transferred with other types of XML data not specific to authn and authz,  
779 such as financial transaction data. What should the relationship of the documents be?

780 One possibility is requiring that SAML allow for enveloping business-specific data within  
781 SAML. Such a requirement might state:

782 [CR-7-01:Enveloping] SAML messages and assertions should be able to envelop  
783 conversation-specific XML data.

784 Note that this requirement is not in conflict with [CR-7-02:Enveloped]. They are mutually  
785 compatible.

786 Possible Resolutions:

- 787 1. Add this proposed requirement.
- 788 2. Do not add this proposed requirement.

789 Voted, No Conclusion

790 Voting Results

{PRIVATE}Date	27 Mar 2001

Resolution 1	9
Resolution 2	4
Abstain	1

791 Status: Closed by vote on Jan 29, 2002. Core specification in XML Signature Profile states that  
792 SAML assertions and protocols must use enveloped signatures.

793 CLOSED ISSUE:[UC-7-02:Enveloped]

794 SAML data will be transferred with other types of XML data not specific to authn and authz,  
795 such as financial transaction data. What should the relationship of the documents be?

796 One possibility is requiring that SAML should be fit for being enveloped in other XML

797 documents.

798 [CR-7-02:Enveloped] SAML messages and assertions should be fit to be enveloped in  
799 conversation-specific XML documents.

800 Note that this requirement is not in conflict with [CR-7-01:Enveloping]. They are mutually  
801 compatible.

802 Possible Resolutions:

803 1. Add this proposed requirement.

804 2. Do not add this proposed requirement.

805 Voted, Resolution 1 Carries

806 Voting Results

{PRIVATE}Date	27 Mar 2001
Eligible	15
Resolution 1	12
Resolution 2	2

807 Status: Closed by vote on Jan 29, 2002. SAML Assertions are fit for being enveloped.

808

808 **Group 8: Intermediaries**

809 CLOSED ISSUE:[UC-8-01:Intermediaries]

810 The use case scenarios in the S2ML 0.8a specification include one where an intermediary passes  
811 an S2ML message from a source party to a destination party. What is the part of intermediaries  
812 in an SAML conversation?

813 A requirement to enable passing SAML data through intermediaries could be phrased as follows:

814 [CR-8-01:Intermediaries] SAML data structures (assertions and messages) will be  
815 structured in a way that they can be passed from an asserting party through one or more  
816 intermediaries to a relying party. The validity of a message or assertion can be  
817 established without requiring a direct connection between asserting and relying party.

818 Possible Resolutions:

- 819 1. Add this requirement to the document.  
820 2. Do not add this requirement to the document.

821 Status: Closed per F2F #2, Resolution 1 Carries

822 DEFERRED ISSUE:[UC-8-02:IntermediaryAdd]

823 One question that has been raised is whether intermediaries can make additions to SAML  
824 documents. It is possible that intermediaries could add data to assertions, or add new assertions  
825 that are bound to the original assertions.

826 **[Text Removed to Archive]**

827 Possible Resolutions:

- 828 1. Add this use-case scenario to the document.  
829 2. Don't add this use-case scenario.

830 Status: Deferred by vote on Jan 29, 2002. There is no support for intermediaries in SAML 1.0. In  
831 fact, the SOAP Profile was defined to explicitly omit interactions among more than two parties.

832 DEFERRED ISSUE:[UC-8-03:IntermediaryDelete]

833 Another issue with intermediaries is whether SAML must support allowing intermediaries to  
834 delete data from SAML documents.

835 **[Text Removed to Archive]**

836 Possible Resolutions:

- 837 1. Add this use-case scenario to the document.
- 838 2. Don't add this use-case scenario.

839 Status: Deferred by vote on Jan 29, 2002. There is no support for intermediaries in SAML 1.0. In  
840 fact, the SOAP Profile was defined to explicitly omit interactions among more than two parties.

841 DEFERRED ISSUE:[UC-8-04:IntermediaryEdit]

842 Similar to [UC-8-03:IntermediaryDelete] is the issue of whether SAML must support allowing  
843 intermediaries to edit or change SAML data as they pass it between parties.

844 **[Text Removed to Archive]**

845 Possible Resolutions:

- 846 1. Add this use-case scenario to the document.
- 847 2. Don't add this use-case scenario.

848 Status: Deferred by vote on Jan 29, 2002. There is no support for intermediaries in SAML 1.0. In  
849 fact, the SOAP Profile was defined to explicitly omit interactions among more than two parties.

850 CLOSED ISSUE:[UC-8-05:AtomicAssertion]

851 One implicit assumption about SAML is that assertions will be represented as XML elements  
852 with associated digital signatures. Any additions, deletions or changes would make the signature  
853 on the assertion invalid. This would make it difficult for relying parties to determine the validity  
854 of the assertion itself, especially if it is received through an intermediary.

855 Thus, the implementation of assertions as element + signature would make [UC-8-  
856 02:IntermediaryAdd], [UC-8-03:IntermediaryDelete], and [UC-8-04:IntermediaryEdit] difficult  
857 to specify, if the idea is to actually modify the original assertions themselves. One possible  
858 solution is that some kind of diff or change structure could be added. Another possibility is that  
859 signatures on each individual sub-element of the assertion could be required, so that if the  
860 intermediary changes one sub-element the others remain valid. Neither of these is a clean  
861 solution.

862 However, if there's no goal of changing the sub-elements of the assertion, then it's possible to  
863 implement modifications. For example, [UC-8-02:IntermediaryAdd] can be implemented  
864 without breaking apart assertions. The B2B exchange could simply add its own assertions to the  
865 order, as well as the assertions provided by the buyer.

866 Deletion and edition could be implemented by simply replacing the assertions made by the buyer

867 -- passing new AuthZ and AuthC assertions made and signed by the B2B exchange. These would  
868 incorporate elements from the assertions made by the Buyer Security System, but be signed by  
869 the B2B exchange.

870 There is semantic value to who makes an assertion, though. If the B2B exchange makes the  
871 assertion rather than the Buyer Security System, there is a different level of validity for the  
872 Seller.

873 Since assertion as element + signature is a very natural implementation, it may be good to  
874 express the indivisibility of the assertion as part of a non-goal. One such non-goal could be:

875 [CR-8-05:AtomicAssertion] SAML does not need to specify a mechanism for additions,  
876 deletions or modifications to be made to assertions.

877 In addition, the use case scenarios should be edited to specifically point out that additions,  
878 deletions or modifications make changes to whole assertions, and not to parts of assertions.

879 Possible Resolutions:

- 880 1. Add this non-goal to the document, and change use case scenarios to specify that  
881 intermediaries must treat assertions as atomic.
- 882 2. Don't add this non-goal.

883 Status: Voted, Resolution 1 Carries

884 Voting Results

Resolution 1	12
Resolution 2	2

885

886

886 **Group 9: Privacy**

887 DEFERRED ISSUE:[UC-9-01:RuntimePrivacy]

888 Should protecting the privacy of the user be part of the SAML conversation? In other words,  
 889 should user consent to exchange of data be given at run time, or at the time the user establishes a  
 890 relationship with a security system?

891 An example of runtime privacy configuration would be use case scenario described in [UC-1-  
 892 04:ARundgrenPush]. Because this scenario has been rejected by the use cases and requirement  
 893 group, it makes sense to phrase this as a non-goal of SAML, rather than as a requirement.

894 [CR-9-01:RuntimePrivacy] SAML does not provide for subject control of data flow  
 895 (privacy) at run-time. The determination of privacy policy is between the subject and  
 896 security authorities and should be determined out-of-band, for example, in a privacy  
 897 agreement.

898 Possible Resolutions

- 899 1. Add this proposed non-goal.  
 900 2. Do not add this proposed non-goal.

901 Voting Results

{PRIVATE}Date	27 Mar 2001
Eligible	15
Resolution 1	9
Resolution 2	4

902 Status: Deferred by vote on Jan 29, 2002.

903 CLOSED ISSUE:[UC-9-02:PrivacyStatement]

904 Important private data of end users should be shared as needed between peers in an SAML  
 905 conversation. In addition, the user should have control over what data is exchanged. How should  
 906 the requirement be expressed in the use case and requirements document?

907 One difficulty is that, if run-time privacy is out of scope per UC-9-01:RuntimePrivacy, it's  
 908 difficult to impose a privacy requirement on eventual implementers. Especially considering that  
 909 our requirements doc is for the specification itself, and not for implementers. In addition,  
 910 specifications rarely proscribe guiding principles that cannot be expressed in the specified

911 technology itself.

912 One statement suggested by Bob Morgan is as follows:

913 [CR-9-02-3-DisclosureMorgan] SAML should support policy-based disclosure of subject  
914 security attributes, based on the identities of parties involved in an authentication or  
915 authorization exchange.

916 Another, by Bob Blakley:

917 [CR-9-02-2-DisclosureBlakley] SAM should support \*restriction of\* disclosure of  
918 subject security attributes, \*based on a policy stated by the subject\*. \*This policy might  
919 be\* based on the identities of parties involved in an authentication or authorization  
920 exchange.

921 A final one, by Prateek Mishra:

922 [CR-9-02-4-DisclosureMishra] An AP should only release credentials for a subject to an  
923 RP if the subject has been informed about this possibility and has assented. The exact  
924 mechanism and format for interaction between an AP and a subject concerning such  
925 privacy issues is outside the scope of the specification.

926 Comment by David Orchard:

927 "My concerns about all of the disclosure requirements, is that I cannot see how any piece of  
928 software could be tested for conformance. In the case of Blakely style, "SAM should support  
929 \*restriction of\* disclosure of subject security attributes, \*based on a policy stated by the  
930 subject\*", how do I write a conformance test that verifies:

- 931 • what are allowable and non-allowable restrictions?
- 932 • How do I test that a non-allowable restriction hasn't been made?
- 933 • How do I verify that a subject has stated a policy?
- 934 • How can a subject state a policy?"

935 Possible Resolutions

- 936 1. Add [CR-9-02-3-DisclosureMorgan] as a requirement.
- 937 2. Add [CR-9-02-2-DisclosureBlakley] as a requirement.
- 938 3. Add [CR-9-02-4-DisclosureMishra] as a requirement.
- 939 4. Add none of these as requirements.

940 Status: Closed by vote of the TC on March 12 2002, Resolution #4

## 941 **Group 10: Framework**

942 CLOSED ISSUE:[UC-10-01:Framework]

943 Should SAML provide a framework that allows delivery of security content negotiated out-of-  
944 band? A typical use case is authorization extensions to the core SAML constructs. The contra-  
945 position is to rigidly define the constructs without allowing extension.

946 A requirement already exists in the SAML document for extensibility: [R-Extensible] SAML  
947 should be easily extensible. Therefore, the change that voting on this issue would make would be  
948 to remove rather than add a requirement.

949 Possible Resolutions:

- 950 1. Remove the extensibility requirement.
- 951 2. Leave the extensibility requirement.

952 Status: Closed per F2F #2, Resolution 2 Carries

953 CLOSED ISSUE:[UC-10-02:ExtendAssertionData]

954 Assertions are the "nouns" of SAML. One way to extend SAML is to allow additional elements  
955 in an assertion besides the ones specified by SAML. This could be used to add additional  
956 attributes about a subject, or data structured under another namespace.

957 A requirement that captures this functionality would be:

958 [CR-10-02:ExtendAssertionData] The format of SAML assertions should allow the  
959 addition of arbitrary XML data as extensions.

960 Possible Resolutions:

- 961 1. Add requirement [CR-10-02:ExtendAssertionData].
- 962 2. Do not add this requirement.

963 Status: Closed per F2F #2, 2 carries

964 CLOSED ISSUE:[UC-10-03:ExtendMessageData]

965 Similarly to [UC-10-02], it would be useful to allow additional data to SAML messages. Either  
966 defined SAML assertions, or arbitrary XML, could be attached.

967 A potential requirement to add this functionality would be:

968 [CR-10-03:ExtendMessageData] The format of SAML messages should allow the  
969 addition of arbitrary XML data, or SAML assertions not specified for that message type,  
970 as extensions.

971 Possible Resolutions:

- 972 1. Add requirement [CR-10-03:ExtendMessageData].
- 973 2. Do not add this requirement.

974 Status: Closed per F2F #2, 2 carries

975 CLOSED ISSUE:[UC-10-04:ExtendMessageTypes]

976 It's common in protocol definitions that real-world implementations require additional message  
977 types. For example, a system handling a request for authorization that is taking a long time might  
978 send a <KeepWaiting> or <AskAgainLater> message to the requester.

979 Many protocols explicitly allow for a mechanism for adding extended message types in their  
980 specification. We may want to require that SAML also allow for extended message types in the  
981 specification. One requirement may be:

982 [CR-10-04:ExtendMessageTypes] The SAML protocol will explicitly allow for  
983 additional message types to be defined by implementers.

984 Note that this is different from [UC-10-03:ExtendMessageData]. That issue is about adding  
985 extended data to existing message types in the protocol. This issue is about adding new message  
986 types entirely.

987 Also note that adding this requirement would strongly favor [CR-10-07-1], to allow  
988 interoperability.

989 Possible Resolutions:

- 990 1. Add requirement [CR-10-04:ExtendMessageTypes].
- 991 2. Do not add this requirement.

992 Status: Closed per F2F #2, 2 carries

993 CLOSED ISSUE:[UC-10-05:ExtendAssertionTypes]

994 As with [UC-10-04], it may be useful to add extended assertions to a SAML conversation. As an  
995 admittedly stretched example, an implementer may choose to add auditing to the SAML  
996 specification, and therefore define one or more <AuditAssertion> types.

997 [Text Removed to Archive]

998 Possible Resolutions:

- 999 1. Add requirement [CR-10-05:ExtendAssertionTypes].
- 1000 2. Do not add this requirement.

1001 Status: Closed per F2F #2, 2 carries

1002 CLOSED ISSUE:[UC-10-06:BackwardCompatibleExtensions]

1003 Because SAML is an interoperability standard, it's important that custom extensions for SAML  
1004 messages and/or assertions be compatible with standard SAML implementations. For this  
1005 reasons, extensions should be clearly recognizable as such, marked with flags to indicate whether  
1006 processing should continue if the receiving party does not support the extension.

1007 One possible requirement for this functionality is the following:

1008 [CR-10-06-BackwardCompatibleExtensions] Extension data in SAML will be clearly  
1009 identified for all SAML processors, and will indicate whether the processor should  
1010 continue if it does not support the extension.

1011 Possible Resolutions:

- 1012 1. Add requirement [CR-10-06-BackwardCompatibleExtensions].
- 1013 2. Do not add this requirement.

1014 Status: Closed per F2F #2, Resolution 1 Carries

1015 CLOSED ISSUE:[UC-10-07:ExtensionNegotiation]

1016 Many protocols allow a negotiation phase between parties in a message exchange to determine  
1017 which extensions and options the other party supports. For example, HTTP 1.1 has the  
1018 OPTIONS method, and ESMTP has the EHLO command.

1019 Since this is a fairly common design model, it may be useful to add such a feature to SAML. One  
1020 option is to add a requirement for extension negotiation:

1021 [CR-10-07-1:ExtensionNegotiation] SAML protocol will define a message format for  
1022 negotiation of supported extensions.

1023 However, this may unnecessarily complicate the SAML protocol. Because negotiation is a  
1024 common design, it may be a good idea to have a clarifying non-goal in the requirements  
1025 document:

1026 [CR-10-07-2:NoExtensionNegotiation] SAML protocol does not define a message format  
1027 for negotiation of supported extensions.

1028 Possible Resolutions:

- 1029 1. Add requirement [CR-10-07-1:ExtensionNegotiation].
- 1030 2. Add non-goal [CR-10-07-2:NoExtensionNegotiation].
- 1031 3. Add neither the requirement nor the non-goal.

1032 Status: Closed per F2F #2, 3 carries

1033

1033 **Group 11: AuthZ Use Case**

1034 CLOSED ISSUE:[UC-11-01:AuthzUseCase]

1035 Use Case 2 in Strawman 3 (<http://www.oasis-open.org/committees/security/docs/draft-sstc-use-strawman-03.html>) describes the use of SAML for the conversation between a Policy  
1036 Enforcement Point (PEP) and a Policy Decision Point (PDP), in which the PEP sends a request  
1037 describing a particular action (such as 'A client presenting the attached SAML data wishes to  
1038 read <http://foo.bar/index.html>'), and the PDP replies with an Authorization Decision Assertion  
1039 instructing the PEP to allow or deny that request.  
1040

1041 Possible Resolutions:

1042 1. Continue to include this use case.

1043 2. Remove this use case.

1044 Status: Closed per F2F #2, Resolution 1 Carries

1045

1045 **Group 12: Encryption**

1046 [Text Removed to Archive]

1047 CLOSED ISSUE:[UC-12-01:Confidentiality]

1048 Add the following requirement:

1049 [R-Confidentiality] SAML data should be protected from observation by third parties or  
1050 untrusted intermediaries.

1051 Possible Resolutions:

- 1052 1. Add [R-Confidentiality]
- 1053 2. Do not add [R-Confidentiality]

1054 Status: Closed per F2F #2, Resolution 1 Carries

1055 CLOSED ISSUE:[UC-12-02:AssertionConfidentiality]

- 1056 1. Add the requirement: [R-AssertionConfidentiality] SAML should define a format so that  
1057 individual SAML assertions may be encrypted, independent of protocol bindings.
- 1058 2. Add the requirement: [R-AssertionConfidentiality] SAML assertions must be encrypted,  
1059 independent of protocol bindings.
- 1060 3. Add a non-goal: SAML will not define a format for protecting confidentiality of  
1061 individual assertions; confidentiality protection will be left to the protocol bindings.
- 1062 4. Do not add either requirement or the non-goal.

1063 Status: Closed per F2F #2, No Conclusion

1064 CLOSED ISSUE:[UC-12-03:BindingConfidentiality]

1065 The first option is intended to make the protection optional (both in the binding definition, and  
1066 by the user at runtime).

- 1067 1. [R-BindingConfidentiality] Bindings SHOULD (in the RFC sense) provide a means to  
1068 protect SAML data from observation by third parties. Each protocol binding must include  
1069 a description of how applications can make use of this protection. Examples: S/MIME for  
1070 MIME, HTTP/S for HTTP.
- 1071 2. [R-BindingConfidentiality] Each protocol binding must always protect SAML data from  
1072 observation by third parties.

1073 3. Do not add either requirement.

1074 Status: Closed per F2F #2, Resolution 1 Carries

1075 DEFERRED ISSUE:[UC-12-04:EncryptionMethod]

1076 If confidentiality protection is included in the SAML assertion format (that is, you chose option 1  
1077 or 2 for [UC-12-02:AssertionConfidentiality]), how should the protection be provided?

1078 Note that if option 2 (assertion confidentiality is required) was chosen for UC-12-02, resolution 1  
1079 of this issue implies that SAML will not be published until after XML Encryption is published.

1080 Proposed resolutions; choose one of:

1081 1. Add the requirement: [R-EncryptionMethod] SAML should use XML Encryption.

1082 2. Add the requirement: [R-EncryptionMethod] Because there is no currently published  
1083 standard for encrypting XML, SAML should define its own encryption format. Edit the  
1084 existing non-goal of not creating new cryptographic techniques to allow this.

1085 3. Add no requirement now, but include a note that this issue must be revisited in a future  
1086 version of the SAML spec after XML Encryption is published.

1087 4. Do not add any of these requirements or notes.

1088 Status: Deferred by vote on Feb 5, 2002 – previously closed per F2F #2, Resolution 3 Carries

1089

1089 **Group 13: Business Requirements**

1090 CLOSED ISSUE:[UC-13-01:Scalability]

1091 Bob Morgan brought up several "business requirements" on security-use. One was scalability.  
1092 This issue is a placeholder for further elaboration on the subject.

1093 A candidate requirement might be:

1094 [CR-13-01-Scalability] SAML should be appropriate for high volume of messages, and  
1095 for messages between parties made up of several physical machines.

1096 Potential Resolutions:

- 1097 1. Add requirement [CR-13-01-Scalability].  
1098 2. Do not add this requirement.

1099 Status: Closed per F2F #2, 2 carries

1100 CLOSED ISSUE:[UC-13-02:EfficientMessages]

1101 Philip Hallam-Baker's core assertions requirement document included several requirements that  
1102 were efficiency-oriented. When that requirement document was merged into Straw Man 2, the  
1103 efficiency requirements were excluded.

1104 One such requirement was:

1105 [CR-13-02-EfficientMessages] SAML should support efficient message exchange.

1106 Potential Resolutions:

- 1107 1. Add this requirement to the use case and requirements document.  
1108 2. Leave this requirement out of use case and requirements document.

1109 Status: Closed per F2F #2, 2 carries

1110 CLOSED ISSUE:[UC-13-03:OptionalAuthentication]

1111 Philip Hallam-Baker's core assertions requirement document included several requirements that  
1112 were efficiency-oriented. When that requirement document was merged into Straw Man 2, the  
1113 efficiency requirements were excluded.

1114 One such requirement was:

1115 [CR-13-03-OptionalAuthentication] Authentication between asserting party and relying

- 1116 party should be optional. Messages may omit authentication altogether.
- 1117 In this case, "authentication" means authentication between the parties in the conversation (for  
1118 example, by means of a digital signature) and not authentication by the subject.
- 1119 Potential Resolutions:
- 1120 1. Add this requirement to the use case and requirements document.
  - 1121 2. Leave this requirement out of use case and requirements document.
- 1122 Status: Closed per F2F #2, 2 carries
- 1123 CLOSED ISSUE:[UC-13-04:OptionalSignatures]
- 1124 Philip Hallam-Baker's core assertions requirement document included several requirements that  
1125 were efficiency-oriented. When that requirement document was merged into Straw Man 2, the  
1126 efficiency requirements were excluded.
- 1127 One such requirement was:
- 1128 [CR-13-04-OptionalSignatures] Signatures should be optional.
- 1129 Potential Resolutions:
- 1130 1. Add this requirement to the use case and requirements document.
  - 1131 2. Leave this requirement out of use case and requirements document.
- 1132 Status: Closed, Voted on May 15 telcon for resolution 1
- 1133 CLOSED ISSUE:[UC-13-05:SecurityPolicy]
- 1134 Bob Morgan proposed a business-level requirement as follows:
- 1135 [CR-13-05-SecurityPolicy] Security measures in SAML should support common  
1136 institutional security policies regarding assurance of identity, confidentiality, and  
1137 integrity.
- 1138 Potential Resolutions:
- 1139 1. Add this requirement to the use case and requirements document.
  - 1140 2. Leave this requirement out of use case and requirements document.
- 1141 Status: Closed per F2F #2, Resolution 2 Carries

1142 CLOSED ISSUE:[UC-13-06:ReferenceReq]

1143 Bob Morgan has questioned requirement [R-Reference] in that it is not specific enough. In  
1144 particular, he said: "Goal [R-Reference] either needs more elaboration or (likely) needs to be  
1145 dropped. What is a 'reference'? It doesn't have a standard well-understood security meaning nor  
1146 is it defined in the glossary. This Goal seems to me to be making an assumption about a low-  
1147 level mechanism for optimizing some of the transfers."

1148 One possible, more specific elaboration might be:

1149 [CR-13-06-1-Reference] SAML should define a data format for providing references to  
1150 authentication and authorization assertions. Here, a "reference" means a token that may  
1151 not be a full assertion, but can be presented to an asserting party to request a particular  
1152 assertion.

1153 [CR-13-06-2-Reference-Message] SAML should define a message format for requesting  
1154 authentication and authorization assertions using references.

1155 [CR-13-06-2-Reference-Size] SAML references should be small. In particular, they  
1156 should be small enough to be transferred by Web browsers, either as cookies or as CGI  
1157 parameters.

1158 Potential Resolutions:

- 1159 1. Replace [R-Reference] with these requirements.
- 1160 2. Leave [R-Reference] as it is.
- 1161 3. Remove mention of references entirely.

1162 Status: Closed per F2F #2, Resolution 2 Carries

1163 DEFERRED ISSUE [UC-13-07: Hailstorm Interoperability]

1164 Should SAML provide interoperability with the Microsoft Hailstorm architecture, including the  
1165 Passport login system?

1166 Status: Deferred by vote on Jan 29, 2002.

1167

1167 **Group 14: Domain Model**

1168 DEFERRED ISSUE:[UC-14-01:UMLCardinalities]

1169 The cardinalities in the UML diagrams in the Domain Model are backwards.

1170 Frank Seliger comments: The Domain model claims to use the UML notation, but has the  
1171 multiplicities according to the Coad method. If it were UML, the diagram would state that one  
1172 Credential could belong to many Principals. I assume that we would rather want to state that one  
1173 Principal can have many Credentials, similarly for System Entity, the generalization of User.  
1174 One Principal would belong to several System Entities or Users according to the diagram. I  
1175 would rather think we want one System Entity or User to have several Principals.

1176 My theory how these wrong multiplicities happened is the following: As I can see from the  
1177 change history, the tool Together has been used to create the initial version of this diagram.  
1178 Together in its first version used only the Peter Coad notation. Later versions still offered the  
1179 Coad notation as default. Peter Coad had the cardinalities (UML calls this multiplicities) just  
1180 swapped compared to the rest of the world. This always caused grief, and it did again here.

1181 Dave Orchard agrees this should be fixed.

1182 Status: Deferred by vote on Jan 29, 2002

1183

1183 **Design Issues**

1184 **Group 1: Naming Subjects**

1185 CLOSED ISSUE:[DS-1-01: Referring to Subject]

1186 By what means should Assertions identify the subject they refer to?

1187 Bob Blakely points out that references can be:

- 1188 1. Nominative (by name, i.e. some identifier)
- 1189 2. Descriptive (by attributes)
- 1190 3. Indexical (by "pointing")

1191 SAML may need to use all types, but Indexical ones in particular can be dangerous from a  
1192 security perspective.

1193 Status: Closed by vote on Sept 4, superceded by more specific issues.

1194 DEFERRED ISSUE:[DS-1-02: Anonymity Technique]

1195 How should the requirement of Anonymity of SAML assertions be met?

1196 Potential Resolutions:

- 1197 1. Generate a new, random identified to refer to an individual for the lifetime of a session.
- 1198 2. ???

1199 Status: Deferred by vote on Jan 29, 2002.

1200 CLOSED ISSUE:[DS-1-03: SubjectComposition]

1201 What is the composition of a subject or "subject specifier" within:

- 1202 • An AuthnAssn?
- 1203 • An AuthnAssnReq?

1204 Note that we have consensus on the overall composition as noted in [sec. 2, 3, & 4 of  
1205 WhiteboardTranscription-01.pdf].

1206 This was identified as F2F#3-9.

1207 This is a more specific variant of DS-1-01.

1208 Status: Closed by vote on Jan 29, 2002. Current core specifies that all Assertions and all  
1209 Requests contain Subject, which in turn consists of either or both NameIdentifier and  
1210 SubjectConfirmation. AssertionSpecifier was dropped.

1211 **CLOSED ISSUE:[DS-1-04: AssnSpecifiesSubject]**

1212 Should it be possible to specify a subject in an Assertion or Assertion Request by reference to  
1213 another Assertion containing the subject in question? The referenced Assertion might be  
1214 indicated by its AssertionID or including it in its entirety.

1215 For example, a PDP might request an Attribute Assertion from an Attribute Authority by  
1216 providing an Authentication Assertion (or its ID) as the way of identifying the subject.

1217 There are two cases: AssertionID and complete Assertion.

1218 **AssertionID**

1219 When requesting an Assertion, it will be useful to specify an AssertionID in a situation where the  
1220 requestor does not have a copy of the Assertion, but was had received the AssertionID from  
1221 some source, for example in a Web cookie. Of course, it would be necessary that the Asserting  
1222 Party be able to obtain the Assertion in question. This scenario would be particularly convenient  
1223 if the Asserting Party already possessed the referenced Assertion, either because it had used it  
1224 previously for some other purpose or because it was co-located with the Authority that created it  
1225 originally.

1226 Using an AssertionID to specify the subject of an Assertion seems less useful, because it would  
1227 make it impossible to interpret the Assertion by itself. If at some later time, the referenced  
1228 Assertion was no longer available; it would not be possible to determine the subject of the  
1229 Assertion in question. Even if the Assertion was available, having two assertions rather than one  
1230 would be much less convenient.

1231 **Complete Assertion**

1232 Whether requesting an Assertion or creating a new assertion, it would never be strictly necessary  
1233 to include another Assertion in its entirety to specify the subject of the first Assertion, because  
1234 the subject field could be copied instead. Hypothetically, the complete contents of the Assertion  
1235 might have some value, as the basis of a policy decision, however the same need could be served  
1236 as well by attaching the second Assertion, rather than including it within the subject field of the  
1237 first.

1238 This was identified as F2F#3-19 and F2F#3-27, although the scope of the latter is limited to the  
1239 specific case of an Authentication Assertion being referenced within an Attribute Assertion.

1240 Potential Resolutions:

1241 1. Allow a subject to be specified by an AssertionID or complete Assertion.

- 1242 2. Allow a subject to be specified by an AssertionID, but not a complete Assertion.  
1243 3. Allow a subject to be specified only in an Assertion Request by an AssertionID.  
1244 4. Do not allow a subject to be specified by either an AssertionID or complete Assertion.

1245 Status: Closed by vote on Jan 29, 2002. AssertionSpecifier has been dropped from Subject.

1246 CLOSED ISSUE:[DS-1-05: SubjectofAttrAssn]

1247 This statement's exact meaning needs to be clarified: "the only Subjects of Attribute Assertions  
1248 are Subjects as described by Authentication Assertions."

1249 This was identified as F2F#3-26.

1250 Status: Closed by vote on Sept, 4. The statement "the only Subjects of Attribute Assertions are  
1251 Subjects as described by Authentication Assertions" has not been clarified, however the Subject  
1252 element of both types of Assertion have identical schemas and there is no suggestion in the core  
1253 spec that they differ in any way.

1254 CLOSED ISSUE:[DS-1-06: MultipleSubjects]

1255 Can an Assertion contain multiple subjects? The multiple subjects might represent different  
1256 identities, which all refer to the same system entity. Allowing multiple subjects seems more  
1257 general and allows for unanticipated future uses.

1258 On the other hand, having multiple subjects creates a number of messy issues, particularly if they  
1259 don't refer to the same entity.

1260 Champion: Irving Reid

1261 Status: Closed by vote on Jan 29, 2002. Multiple subjects are allowed. The statements in the  
1262 assertion apply to all of them.

1263 CLOSED ISSUE:[DS-1-07: MultipleSubjectConfirmations]

1264 Should multiple Confirmation methods be allowed for a single NameIdentifier within the  
1265 Subject? Basically, this is a tradeoff between flexibility and complexity of (possibly undefined)  
1266 semantics.

1267 Champion: Gil Pilz

1268 Status: Closed by vote on Jan 29, 2002. Multiple SubjectConfirmationMethods are allowed. A  
1269 relying party may use any or them to confirm the subject's identity.

1270 CLOSED ISSUE:[DS-1-08: HolderofKey]

1271 If a HolderOfKey SubjectConfirmation is used, does that imply that the subject is the sender of  
1272 the associated application message (request)? In general, the semantics of SubjectConfirmation  
1273 need to be made very explicit in the core specification.

1274 Champion: Irving Reid

1275 Status: Closed by vote of the TC on March 12, 2002. Current core says that when Holder of Key  
1276 is used, the subject is the party that can demonstrate possession of the corresponding private key.

1277 CLOSED ISSUE:[DS-1-09: SenderVouches]

1278 What are the semantics of SenderVouches? How does an Assertion containing this element differ  
1279 from one that does not? When should it be used?

1280 Champion: Prateek Mishra

1281 Status: Closed by vote of the TC on March 12, 2002. Although the SOAP Profile as a whole has  
1282 been deferred, the descriptions previously added to core and bindings have satisfied this concern

1283 CLOSED ISSUE:[DS-1-10: SubjectConfirmation Descriptions]

1284 The descriptions of the subject confirmation method are inadequate.

- 1285 1. There should be enough info to allow interoperation without prearrangement.  
1286 2. Ideally we should give implementors some guidance on the intended use of each, in particular,  
1287 when to use one vs. another.

1288 General Comments:

1289 There is no reference for SHA1. The reference is RFC3174. D. Eastlake, 3rd, P. Jones US Secure  
1290 Hash Algorithm 1 (SHA1) September 2001 <http://www.ietf.org/rfc/rfc3174.txt> Also decide if it  
1291 is SHA-1 or SHA1 and stick to it.

1292 All binary quantities should be represented the same way. Suggest base 64

1293 Specific:

1294 SAML Artifact - if this is specifically the SAML artifact and not just any random binary nonce,  
1295 this should reference the bindings doc, Browser Artifact Profile, section on Artifact format  
1296 (would be easier if doc had numbered sections) Also state if must be typecode 1 or can be any  
1297 typecode. Also should say: This Method is used when a web browser is issued an artifact by the  
1298 asserting party and later presents it to the relying party.

1299 SAML Artifact (SHA1) - ditto the above. Plus, why do we need both of these? Hashing is good  
1300 because you cannot derive Artifact from looking at assertion. Why not use it all the time? On the

1301 other hand, the Profile specifies one-time use for the artifact, so I don't really see the threat.  
1302 Either way I think we should drop one of these.

1303 Holder of Key - What kind of key? It says "Any Cryptographic Key" but then indicates it is a  
1304 Public Key. Should include a reference to [XMLSig]. Do we really want to support all the  
1305 KeyInfo sub-elements, or just KeyValue? Looks to me like a lot of these, like KeyName,  
1306 X509Data, PGPDData, SPKIDData and MgmtData, will just cause trouble and bloat  
1307 implementations.

1308 Sender Vouches - This one still puzzles me and I know it will puzzle anybody outside the TC.  
1309 Can't we incorporate some of the discussion from the list about what this is intended for?

1310 Password (Pass-Through) - What is the significance of "pass-through"? I hope somebody isn't  
1311 trying to do a Credentials Assertion by the back door. Is this intended to be a long term  
1312 password, or can it be some kind of artifact-like nonce? Does it have to be the password used for  
1313 authentication if this is an authentication assertion? If it is, what is the value of the  
1314 Authentication Assertion? Why would anyone want to send this unhashed if this is being used  
1315 as a confirmation method or is it being overloaded as an encrypted attributed for proxy login  
1316 purposes?

1317 Password (One-Way-Function SHA-1) - Why is this one "One-Way-Function" and the others  
1318 just "SHA-1"? I gather this is not intended to cover the case where the hashed password is stored  
1319 in the repository and the AP does not know the real password. I would drop the previous one in  
1320 favor of this one.

1321 Kerberos - Specify Kerberos 5. What kind of ticket? A ticket granting ticket makes no sense, so I  
1322 assume this must be a service ticket targeted to the relying party. Should say so. Also specify  
1323 base 64. Does username and realm in ticket have to match Security Domain and Name in  
1324 NameIdentifier? Or should the Security Domain be missing (or blank) and the Name contain  
1325 realm@username? Implementors will have to consider ticket lifetime as it could be shorter than  
1326 Assertion validity. Also not this doesn't make that much sense in an Authentication Assertion.

1327 SSL/TLS Certificate Based Client Authentication - Does it have to be different from Holder of  
1328 Key? Will we need another for SMIME, etc?

1329 Object Authenticator (SHA-1) - How can an XML document be a Subject? I thought a subject  
1330 referred to a system entity. Don't see how this would work in practice. Does the AP do the  
1331 hashing? Does the RP do the hashing? If neither, don't see it provides any more protection than a  
1332 simple random nonce.

1333 PKCS#7 - Thought this would be redundant with ds:KeyInfo, but looking at [XMLSig]  
1334 apparently not. Why does this have to be signed? Isn't the whole assertion signed? Isn't signing  
1335 optional? The description is nice and long, but doesn't a lot of it apply to other Confirmation  
1336 Methods as well? What part is unique to this one?

- 1337 Cryptographic Message Syntax - ditto PKCS #7, except this time there is no explanation of how  
1338 it is used for confirmation.
- 1339 XML Digital Signature - ditto on being signed. Also no description of how confirmation is  
1340 accomplished. How is its intended use different from say, Holder of Key?
- 1341 As noted elsewhere, the "Bearer" method dropped in the bit bucket
- 1342 <http://lists.oasis-open.org/archives/security-services/200201/msg00247.html>
- 1343 Champion: Hal Lockhart
- 1344 Status: Closed by vote of the TC on April 9, 2002. Some methods have been clarified, others  
1345 have been dropped from the document. In general, subject confirmation methods have been  
1346 declared to be a subject of profiles and moved to that document.
- 1347 **CLOSED ISSUE:[DS-1-11: SubjectConfirmationMethod vs. AuthNMethod]**
- 1348 The distinction between SubjectConfirmationMethod and AuthenticationMethod is unclear. This  
1349 has been raised several times, most recently by SAP as item #14 in:
- 1350 <http://lists.oasis-open.org/archives/security-services-comment/200202/msg00008.html>
- 1351 Champion: Hal Lockhart
- 1352 Status: Closed by vote of the TC on April 9, 2002. Additional wording to clarify the distinction  
1353 has been added.
- 1354 **CLOSED ISSUE:[DS-1-12: Clarify NameIdentifier]**
- 1355 We need to clarify the semantics of NameIdentifiers (core-27 section 2.4.2.2, lines 631 ff.
- 1356 <http://lists.oasis-open.org/archives/security-services/200202/msg00183.html>
- 1357 Champion: Irving Reid
- 1358 Status: Closed by vote of the TC on April 9, 2002. Clarifying text has been added.
- 1359 **CLOSED ISSUE:[DS-1-13: Methods Same Section]**
- 1360 Should SubjectConfirmationMethods and Authentication Methods be listed in the same section?
- 1361 <http://lists.oasis-open.org/archives/security-services/200203/msg00006.html>
- 1362 Champion: Jeff Hodges
- 1363 Status: Closed by vote of the TC on April 9, 2002. Subject confirmation methods have been

1364 moved to the profiles document.

1365

1365 **Group 2: Naming Objects**

1366 CLOSED ISSUE:[DS-2-01: Wildcard Resources]

1367 Nigel Edwards has proposed that Authorization Decision Assertions be allowed to refer to  
1368 multiple resources by means of some kind of wildcards.

1369 Potential Resolutions:

- 1370 1. Allow resources to be specified with fully general regular expressions.  
1371 2. Allow resources to be specified with simple \* wildcard in the final path element: e.g.  
1372 /foo/\*, but not /foo/\*/x or /foo/y\*  
1373 3. Don't allow wildcarded resources

1374 Status: Closed by vote during May 29 telecon

1375 CLOSED ISSUE:[DS-2-02: Permissions]

1376 Should the qualifiers of objects be called permissions, actions or operations? Authorization  
1377 decision assertions contain an object that identifies the target of the request. This is qualified  
1378 with a field called permissions, containing values like "Read" and "Write". Normal English  
1379 language usage suggests that this field represents an Action or Operation on the object.

1380 Possible Resolutions:

- 1381 1. Retain Permissions  
1382 2. Change to Actions  
1383 3. Change to Operations

1384 Status: Closed by vote on Sept 4. Resolution 2 (Actions)

1385

1385 **Group 3: Assertion Validity**

1386 DEFERRED ISSUE:[DS-3-01: DoNotCache]

1387 It has been suggested that there should be a way in SAML to specify that an assertion is currently  
1388 valid, but should not be cached for later use. This should not depend on the particular amount of  
1389 variation between clocks in the network.

1390 For example, a PDP may wish to indicate to a PEP that it should make a new request for every  
1391 authorization decision. For example, its policy may be subject to change at frequent and  
1392 unpredictable intervals. It would be desirable to have a SAML specified convention for doing  
1393 this. This may interact with the position taken on clock skew. For example, if SAML takes no  
1394 position on clock skew the PDP may have to set the NotAfter value to some time in the future to  
1395 insure that it is not considered expired by the PEP.

1396 Potential Resolutions:

1397 1. SAML will specify some combination of settings of the IssueInstant and ValidityInterval to  
1398 mean that the assertion should not be cached. For example, setting all three datetime fields to the  
1399 same value could be deemed indicate this.

1400 2. SAML will add an additional element to either Assertions or Responses to indicate the  
1401 assertion should not be cached.

1402 3. SAML will provide no way to indicate that an Assertion should not be cached.

1403 Status: Deferred by vote on Jan 29, 2002.

1404 CLOSED ISSUE:[DS-3-02: ClockSkew]

1405 SAML should consider the potential effects of clock skew in environments it is used.

1406 It is impossible for local system clocks in a distributed system to be exactly the same, the only  
1407 question is: how much do they differ by? This becomes an issue in security systems when  
1408 information is marked with a validity period. Different systems will interpret the validity period  
1409 according to their local time. This implies:

1410 1. Relying parties may not make the same interpretation as asserting parties.

1411 2. Distinct relying parties may make different interpretations.

1412 Generally what matters is not the absolute difference, but the difference as compared to the total  
1413 validity interval of the information. For example, the PKI world has tended to (rightly) ignore  
1414 this issue because CA and EE certificates tend to have validity intervals of years. Even Attribute  
1415 Certificates and SAML Attribute Assertions are likely to have validity intervals of days or hours.

1416 However, it seems likely that Authorization Decision Assertions may sometimes have validity  
1417 intervals of minutes or seconds. Therefore, the issue must be raised.

1418 One common problem is what to set the NotBefore element to. If it is set to the AP's current  
1419 time, it may not yet be valid for the RP. If set in the past, (a common practice) the questions arise  
1420 1) how far in the past? and 2) should the NotAfter time also be adjusted? If NotBefore is omitted,  
1421 this may not be satisfactory for nonrepudiation purposes.

1422 The NotAfter value can also be an issue if the assumed clock skew is large compared to the  
1423 Validity Interval.

1424 [These paragraphs contain personal observations by Hal Lockhart, others may disagree.

1425 In the early 1990's some popular computer systems had highly erratic system clocks which could  
1426 drift from the correct time by as much as five minutes per day. Kerberos's requirement for rough  
1427 time synchronization (usually 5 minutes) was criticized at that time because of this reality.

1428 Today most popular computer systems have clocks which keep time accurately to seconds per  
1429 month. Therefore the most common current source of time differences is the manual process of  
1430 setting time. Therefore, most systems tend to be accurate within a few minutes, generally less  
1431 than 10.

1432 By means of NTP or other time synchronization system, it is not hard to keep systems  
1433 synchronized to less than a minute, typically within 10 seconds. It is common for production  
1434 server systems to be maintained this way. The price of GPS hardware has fallen to the point  
1435 where it is not unreasonably expensive to keep systems synchronized to the true time with sub-  
1436 second accuracy. However, few organizations bother to do this. ]

1437 Potential Resolutions:

- 1438 1. SAML will leave it up to every deployment how to deal with clock skew.
- 1439 2. SAML will explicitly state that deployments must insure that clocks differ by no more  
1440 that X amount of time (X to be specified in the specification)
- 1441 3. SAML will provide a parameter to be set during deployment that defines the maximum  
1442 clock skew in that environment. This will be used by AP's to adjust datetime fields according to  
1443 some algorithm.
- 1444 4. SAML will provide a parameter in assertions that indicates the maximum skew in the  
1445 environment. RPs should use this value in interpreting all datetime fields.

1446 Status: Closed by vote on Jan 29, 2002. Resolution 1 was chosen implicitly.

1447 CLOSED ISSUE:[DS-3-03: ValidityDependsUpon]

1448 In a previous version of the draft spec, assertions contained a ValidityDependsUpon

1449 element, which allowed the asserting party to indicate that this assertion was valid only if  
1450 another, specified assertion was valid. This was dropped because it was felt that the lack of a  
1451 SAML mechanism to revoke previously issued assertions made it moot.

1452 A number of people feel that this element is useful nevertheless and should be restored.

1453 It is worth noting that even in the absence of this element (from the a particular assertion or  
1454 SAML as a whole) a particular relying party can still have a policy that requires multiple  
1455 assertions to be valid.

1456 Status: Closed by vote of the TC on March 12, 2002. This element has been eliminated.

1457

1458

1458 **Group 4: Assertion Style**

1459 CLOSED ISSUE:[DS-4-01: Top or Bottom Typing]

1460 Should assertions be identified as Authentication, Attribute and Authorization Decision, each  
1461 containing specified elements? (Top Typing) Or should only the elements be defined allowing  
1462 them to be freely mixed? (Bottom Typing)

1463 Two comprehensive proposals to address this issue have been made in draft-orchard-maler-  
1464 assertion-00 and draft-sstc-core-08.

1465 Status: Closed by vote on Sept 4. Made moot by current schemas, which draw on both sets of  
1466 ideas.

1467 CLOSED ISSUE:[DS-4-02: XML Terminology]

1468 Which XML terms should we be using in SAML? Possibilities include: message, document,  
1469 package.

1470 Status: Closed by vote on Jan 29, 2002. The following has been accepted.

1471 SAML is specified in terms of XML. The data objects comprising SAML ("SAML objects" for  
1472 short) are thus expressed in an XML-based syntax as defined by the SAML schema, itself  
1473 expressed according to the XML schema syntax. Those SAML objects defined in terms of "XML  
1474 elements" are formally "XML documents" when considered \*in the context of XML itself\*.

1475 See <http://www.w3.org/TR/2000/REC-xml-20001006>.for the definition of "XML document".

1476 However, when considering SAML objects \*in the SAML context\*, we SHOULD use terms  
1477 (and combinations thereof, along with other terms not explicitly on this list) such as: "assertion",  
1478 "request", "response", "message", "query", "element". We SHOULD NOT use the term  
1479 "document" to describe SAML objects in the SAML context.

1480 Some obvious examples..

- 1481 • request message
- 1482 • response message
- 1483 • authentication assertion
- 1484 • SAML assertions
- 1485 • foo element, e.g. <Subject> element

1486

1487 A longer prose example:

1488 The SAML protocol is comprised of request and response messages. SAML requests are

1489 comprised of authentication, authorization, and attribute queries. A SAML response  
1490 message is returned as a result of a query. SAML responses convey SAML authentication  
1491 assertions, authorization decision assertions, and attribute assertions.

1492 SAML assertions may be combined with other non-SAML objects in various fashions.  
1493 Examples of some such objects are otherwise-arbitrary, non-SAML XML documents  
1494 (thus including various non-SAML, XML-based protocol elements, e.g. SOAP, ebXML),  
1495 MIME messages, and so on.

1496 **CLOSED ISSUE:[DS-4-03: Assertion Request Template]**

1497 What is the best way to provide a template of values in an assertion request?

1498 Two comprehensive proposals to address this issue have been made in draft-orchard-maler-  
1499 assertion-00 and draft-sstc-core-08.

1500 **Potential Resolutions:**

- 1501 1. The requestor sends an assertion with the required field types, but missing values
- 1502 2. The requestor sends fields and values, in the form of a list, not an assertion
- 1503 3. XPATH expressions
- 1504 4. XML query statements

1505 **Status:** Closed by vote on Sept 4. Agreed upon approach does not use a template.

1506 **CLOSED ISSUE:[DS-4-04: URIs for Assertion IDs]**

1507 Should URIs be used as identifiers in assertions?

1508 This issue was identified as F2F#3-8: "We need to decide the syntax of AssertionID." Although  
1509 this is a broader formulation, the discussion below is actually directed towards it rather than the  
1510 original form (above).

1511 This was identified as CONS-02. Does the specification (core-12) need additional specification  
1512 for the types of assertion, request, and response IDs? If so, what are these requirements?

1513 **[Text Removed to Archive]**

1514 **Status:** Closed by vote on Jan 29, 2002. Current core spec defines Assertion Ids as strings, thus  
1515 allowing them to be URIs if desired. Uniqueness of Ids is specified.

1516 **CLOSED ISSUE:[DS-4-05: SingleSchema]**

1517 Should we design the schema for Assertions and their respective request/response messages in

1518 different XML namespaces?

1519 Request/response messages could reference the core assertions schema. There could be many  
1520 applications that reference the core assertions without referencing the request/response stuff.  
1521 Making them pull in the request/response namespace is just extra overhead.

1522 This has been identified as F2F#3-36.

1523 Potential Resolutions:

1524 1. Use a single schema for Assertions and Request/Response messages.

1525 2. Have a schema for Assertions that is distinct from the schema for Request/Response  
1526 messages.

1527 Status: Closed by vote on Jan 29, 2002. Resolution 2 was adopted.

1528 DEFERRED ISSUE:[DS-4-06: Final Types]

1529 Does the TC plan to restrict certain types in the SAML schema to be final? If so, which types are  
1530 to be so restricted?

1531 This was identified as CONS-03.

1532 Status: Deferred by vote on Feb 5, 2002 - was previously closed by vote on Sept 4. The Schema  
1533 recommendations proposed by Eve and Phill at F2F#4 have been accepted.

1534 CLOSED ISSUE:[DS-4-07: ExtensionSchema]

1535 One of the goals of the F2F #3 “whiteboard draft” was to use strong typing to differentiate  
1536 between the three assertion types and between the three different query forms. This has been  
1537 achieved (in core-12) through the use of “abstract” schema and schema inheritance. One  
1538 implication is that any concrete assertion instance MUST utilize the xsi:type attribute to  
1539 specifically describe its type even as all assertions will continue to use a single <Assertion>  
1540 element as their container. XML processors can key off this attribute during assertion processing.

1541 Is this an acceptable approach? Other approaches, such as the use of substitution groups, are also  
1542 available. Using substitution groups, each concrete assertion type would receive its own  
1543 distinguished top-level element (e.g., <AuthenticationAssertion>) and there would be no need  
1544 for the use of xsi:type attribute in any assertion instance. At the same time the SAML schema  
1545 would be made somewhat more complex through the use of substitution groups.

1546 Should the TC investigate these other approaches? Most important: what is the problem with the  
1547 current approach?

1548 This was identified as CONS-04.

1549 Status: Closed by vote on Sept 4. The Schema recommendations proposed by Eve and Phill at  
1550 F2F#4 have been accepted

1551 CLOSED ISSUE:[DS-4-08: anyAttribute]

1552 Summary: In order to make it possible to extend SAML to add attributes to native elements, we  
1553 would need to add <xsd:anyAttribute> all over the place. Should we do this?

1554 Explanation:

1555 We have expended a lot of effort trying to get SAML's customizability "right". We allow the  
1556 extension of our native types to get new elements, and in selected places we allow for the  
1557 addition of foreign elements by design. Given our prohibition against changing SAML  
1558 semantics with foreign markup, we wouldn't have to worry if foreign attributes were tacked onto  
1559 native elements, and this is a relatively cheap and easy way to "extend" a vocabulary.

1560 For example, if a SAML assertion producer finds it convenient to add ID attributes to various  
1561 elements for internal management purposes, or if they want to state what natural language an  
1562 attribute value is in, currently they can't do that and still validate the results:

1563 <saml:AttributeValue xml:lang="EN-US" AttValID="12345">...

1564 Now, xml:lang is somewhat of a special case, since its semantics are baked into core XML, but  
1565 you still need to account for it in the schema if you want to validate. We may want to account  
1566 for xml:lang and xml:space specially in the schema just because XML always allows them, but  
1567 that doesn't answer the ID attribute case, or any other similar case.

1568 The anyAttribute approach is used in some other schemas I know of, but in general they also use  
1569 ##any and ##other a lot more too.

1570 Do we want to allow this kind of flexibility in SAML?

1571 Champion: Eve Maler

1572 Status: Closed by vote of the TC on March 12, 2002. Proposal was not accepted.

1573 CLOSED ISSUE:[DS-4-09: Eliminate SingleAssertion]

1574 Proposal:

- 1575 • Eliminate the <SingleAssertion> Element and SingleAssertionType.
- 1576 • Rename the <Assertion> element to <AbstractAssertion>.
- 1577 • Rename <MultipleAssertion> to <Assertion> and MultipleAssertionType to  
1578 AssertionType.

1579 Rationale:

1580 In the current core the <Assertion> element is of type AssertionAbstractType and contains  
1581 assertion header data and no statements. <SingleAssertion> is of type SingleAssertionType and  
1582 contains assertion header data and exactly one statement. <MultipleAssertion> is of type  
1583 MultipleAssertionType and contains assertion header data and ZERO or more statements.

1584 There are a number of problems with this.

1585 First of all it is entirely possible to construct a SAML assertion containing one statement in two  
1586 valid ways: as either a <SingleAssertion>, or as a <MultipleAssertion> that contains exactly one  
1587 element. In general we want to avoid creating languages that allow you to say the same thing  
1588 different ways--primarily to avoid the possibility of implementers drawing a distinction between  
1589 the two cases.

1590 I would suggest doing away with the <SingleAssertion> element and type altogether, since it's  
1591 functionality is entirely incorporated into the <MultipleAssertion> element and type.

1592 Theoretically we lose the benefit of being able to make slightly more efficient systems for cases  
1593 where it is KNOWN that only single statements will be contained in the assertions passed. I  
1594 would assert that this benefit is illusory, but that even if it were real in some cases it's loss is  
1595 certainly outweighed by the fact that general SAML systems would not have to handle both  
1596 <SingleAssertion> and <MultipleAssertion> elements--without even considering the general  
1597 gain of avoiding the "two ways to say one thing" problem.

1598 Secondly there is the problem of the <Assertion> element. I assume that it is declared to allow  
1599 people to specify that other elements will contain an "assertion", and that the intention is that in  
1600 practice this will be populated with an descendant type that is identified via the xsi:type notation.  
1601 In other words, I think the intention is that no one will even create an <Assertion> element that  
1602 actually has the "AssertionAbstractType" type--they will only ever use it as a placeholder to  
1603 indicate that a descendant of the "AssertionAbstractType" should be inserted. If this is the case  
1604 then I suggest that we make this explicit by renaming the <Assertion> element to  
1605 <AbstractAssertion>.

1606 Thirdly, we can now rename <MultipleAssertion> to <Assertion> and "MultipleAssertionType"  
1607 to "AssertionType".

1608 The result:

1609 A core where the <AbstractAssertion> element is of type "AssertionAbstractType", and contains  
1610 only assertion header data, and the <Assertion> element--which is of "AssertionType" contains  
1611 assertion header data and zero or more statements.

1612 Champion: Chis McLaren

1613 Status: Closed by vote on Jan 29, 2002. SingleAssertion has been eliminated.

1614 CLOSED ISSUE:[DS-4-10: URI Fragments]  
1615 One issue that was raised was the issue of expressing identifiers as URI fragments. I.E. if our  
1616 base spec is <http://foo.bar/base> then the identifiers defined therein should be of the form  
1617 <http://foo.bar/base#X#Y#Z> etc rather than the <http://foo.bar/base/PKCS7> style I used.

1618 This would also change RespondWith slightly so that the identifiers were all nominally  
1619 fragments off the default URI which would be the base URI for the spec.

1620 All this means in practice is we introduce some # characters in several spots.

1621 <http://lists.oasis-open.org/archives/security-services/200201/msg00284.html>

1622 Champion: Phill Hallam-Baker

1623 Status: Closed by vote of the TC on March 12, 2002. Indicated changes have been made.

1624 CLOSED ISSUE:[DS-4-11: Zero Statements]

1625 Why does it matter if there are zero statements in an assertion? Shouldn't there be suitable  
1626 consistent semantics to handle that case?

1627 <http://lists.oasis-open.org/archives/security-services/200202/msg00010.html>

1628 Champion: Polar Humenn

1629 Status: Closed by vote of the TC on March 12, 2002. Suggestion has not been accepted.

1630 CLOSED ISSUE:[DS-4-12: URNs for Protocol Elements]

1631 Should SAML use URNs to specify various protocol elements?

1632 The SAML core spec draft (draft-sstc-core-25.pdf) specifies a number of URIs to identify  
1633 protocol elements, including XML namespaces (eg lines 180 and 183) and other items such as  
1634 confirmation methods (section 7.1, lines 1449 and following). These are currently http: URLs  
1635 (acknowledged as temporary), but I suggest it would be better to use URNs in the urn:oasis  
1636 namespace as defined in RFC 3121. I note that the DSML 2.0 document uses a base namespace  
1637 of "urn:oasis:names:tc:DSML:2:0:core" and so is a good precedent. I suggest for SAML a base  
1638 of:

1639 <urn:oasis:names:tc:SAML:1.0>

1640 Even though the TC isn't named "SAML" it seems like this string would be both concise and  
1641 well-understood. But Karl (I suppose) should make this call.

1642 Given the above, the assertion and protocol URNs could be:

1643 <urn:oasis:names:tc:SAML:1.0:assertion>

- 1644 urn:oasis:names:tc:SAML:1.0:protocol
- 1645 and perhaps the confirmation method identifiers could be:
- 1646 urn:oasis:names:tc:SAML:1.0:cm:artifact
- 1647 urn:oasis:names:tc:SAML:1.0:cm:holder-of-key
- 1648 etc.
- 1649 And the Action namespace identifiers in section 7.2 (lines 1520 etc) could be:
- 1650 urn:oasis:names:tc:SAML:1.0:action:rwedc
- 1651 Champion: RL "Bob" Morgan
- 1652 Status: Closed by vote of the TC on April 9, 2002. URNs are now used throughout.
- 1653 CLOSED ISSUE:[DS-4-13: Empty Strings]
- 1654 Should SAML prohibit string elements from being empty? Does this cause any problems? If so,
- 1655 should it be enforced in the Schema or just stated in the spec?
- 1656 Eve Maler commented:
- 1657 SAML has the following elements and attributes that can currently be empty strings (these are
- 1658 from core-25; I've tried to note places where changes are forthcoming).
- 1659 Constructs of type xsd:string
- 1660 This type allows empty strings by default.
- 1661 • Optional Name and Security Domain attributes on saml:NameIdentifier
  - 1662 • Optional IDAddress and DNSAddress attributes on saml:AuthenticationLocality
  - 1663 • The saml:Action element
  - 1664 • Optional AttributeName attribute on saml:AttributeDesignator and saml:Attribute
  - 1665 • The AssertionArtifact element
  - 1666 • StatusMessage element
- 1667 I think we don't have to worry too much about most of these; the incentive is to provide content.
- 1668 However, we should be clear that we expect there to be some content.
- 1669 Constructs of type saml:IDType
- 1670 This is a trivial derivation of xsd:string; note that some of these will change to IDReferenceType
- 1671 soon, but the emptiness quotient won't change for them.
- 1672 • Required AssertionID and Issuer attributes on saml:Assertion

1673       • Required RequestID attribute on samlp:Request

1674       • Required ResponseID and InResponse attribute on samlp:Response

1675 We could add a minLength facet to the definition of IDType that forces the length to be greater  
1676 than zero if we want there to be a syntactic check that some ID is present. Given that so many of  
1677 the characteristics of a ID that make it unique/successful are out of the hands of syntactic  
1678 expression, it seems a bit like a futile gesture.

1679 Constructs of type xsd:anyURI

1680 This type allows a length of zero because empty URIs have an RFC 2396-defined meaning.

1681       • Required-repeatable Target element

1682       • Optional Binding attribute on saml:AuthorityBinding

1683       • Optional (soon to be required) Resource attribute on  
1684 saml:AuthorizationDecisionStatement

1685       • Optional Namespace attribute on saml:Actions

1686       • Optional AttributeNamespace attribute on saml:AttributeDesignator and saml:Attribute

1687       • The samlp:RespondWith element

1688 Producers of SAML markup will probably have an incentive to provide sufficient content in at  
1689 least the Target and RespondWith cases because they don't have to be used at all; if you bother to  
1690 put them on, you'll bother to add content.

1691 I'm not convinced it's illegitimate to have an empty URI in the Resource case. We may need to  
1692 investigate the Resource case further, but as a reminder, the example I mentioned in today's call  
1693 was an empty URI meaning "this resource" when the action is "execute" and it's an authorization

1694 decision statement attached to a SOAP purchase-order payload. Others on the call favored a  
1695 statement that says that SAML behavior is undefined when the Resource is an empty URI.

1696 In the other cases (Binding, Namespace, and AttributeNamespace), we may want to be clear  
1697 about the non-empty requirement, but since these attributes are optional, it doesn't seem very  
1698 important to restrict this.

1699 Analysis

1700 It seems like a pain to add facets in the saml:IDType and xsd:string cases to ensure that there's  
1701 content in all these places, but at the same time, if we're truly worried about interoperability and  
1702 mischievous producers of SAML content, we should probably use the syntactic option at our  
1703 disposal. It's not all that invasive, though, if we just redefine IDType

1704 (and the forthcoming IDReferenceType) slightly, define a saml:string that has the appropriate  
1705 facet defined, and then switch from xsd:string to saml:string. We should also add prose to the  
1706 description of all of these types.

1707 As for xsd:anyURI, the rationale for messing with it at this point doesn't seem as strong as in the  
1708 other cases.

1709 Auxiliary issues

- 1710 • If we \*don't\* turn the Name attribute into regular NameIdentifier content, I think it  
1711 should be required, not optional.
- 1712 • Should the Namespace attribute be called ActionNamespace in parallel with  
1713 AttributeNamespace? (A few of us had a thread on the "namespace concept" topic  
1714 recently, wherein a few other alternative names were suggested as well. Should this be  
1715 turned into a low-priority issue?)

1716 <http://lists.oasis-open.org/archives/security-services/200202/msg00035.html>

1717 Champion: Eve Maler

1718 Status: Closed by vote of the TC on April 9, 2002. Normative text has been added.

1719 CLOSED ISSUE:[DS-4-14: AuthorityKind and RespondWith]

1720 It is proposed that we change the AuthorityKind and RespondWith elements to be qnames, with  
1721 the combination of the XML namespace qualifier and the name in the qname uniquely naming  
1722 the type of SAML Statement.

1723 <http://lists.oasis-open.org/archives/security-services/200202/msg00185.html>

1724 Champion: Irving Reid

1725 Status: Closed by vote of the TC on April 9, 2002. The recommended change has been made.

1726 DEFERRED ISSUE:[DS-4-15: Common XML Attributes]

1727 Factor out various common XML attributes used in various places. This is ELM-1 in:

1728 <http://lists.oasis-open.org/archives/security-services/200203/msg00042.html>

1729 Champion: Eve Maler

1730 Status: Deferred by vote of the TC on March 19, 2002.

1731

1731 **Group 5: Reference Other Assertions**

1732 A number of requirements have been identified to reference an assertion with in another  
1733 assertion or within a request.

1734 Phillip Hallam-Baker observes: “there is more than one way to support this requirement,

1735 “[A] The first is to simply cut and paste the assertion into the <Subject> field so we have  
1736 <Subject><Assertion><Claims><Subject>[XYZ]. This approach is simple and direct but does  
1737 not seem to achieve much since it essentially comes down to ‘you can unwrap this structure to  
1738 find the information you want’. Why not just cut to the chase and specify <Subject>[XYZ] ?

1739 “[B] The problem with cutting to the chase is that it means that the application is simply told the  
1740 <subject> without any information to specify where that data came from. In many audit  
1741 situations one would need this type of information so that if something bad happens it is possible  
1742 to work out exactly where the bogus information was first introduced and how many inferences  
1743 were derived from it. So we might have <Subject><AssertionRef>[XYZ]

1744 “[C] The above is my preferred representation since the assertion can be used immediately by the  
1745 simplest SAML application without the need to dereference the assertion reference to discover  
1746 the subject of the assertion. However one could argue that an application might want to specify  
1747 simply <Subject><AssertionRef> and then specify the referenced assertion in the advice  
1748 container.

1749 “I think that the choice is really between [B] and [C] since the first suggestion in [A] is unwieldy  
1750 and the second is simply the status quo.

1751 “Of these [B] is more verbose, [C] requires applications to perform some pointer chasing and  
1752 could be seen as onerous.”

1753 The following four scenarios have been identified where this is required:

1754 DEFERRED ISSUE:[DS-5-01: Dependency Audit]

1755 One issue with draft-sstc-core-07.doc is a lack of support for audit of assertion dependency  
1756 between co-operating authorities. As one explicit goal of SAML was to support inter-domain  
1757 security (i.e., each authority may be administered by a separate business entity) this seems to be  
1758 a serious "gap" in reaching that goal.

1759 Consider the following example:

1760 (1) User Ravi authenticates in his native security domain and receives

1761 Assertion A:

1762

```
1763     <Assertion>
1764     <AssertionID>http://www.small-company.com/A</AssertionID>
1765     <Issuer>URN:small-company:DivisionB</Issuer>
1766     <ValidityInterval> . . . </ValidityInterval>
1767     <Claims>
1768         <subject>"cn=ravi, ou=finance, id=325619"</subject>
1769         <attribute>manager</attribute>
1770     </Claims>
1771 </Assertion>
```

1772 (2) User Ravi authenticates to the Widget Marketplace using assertion A and based on the  
1773 policy:

1774 All entities with "ou=finance" authenticated thru small-company.com with attribute  
1775 manager have purchase limit \$100,000 receives Assertion B from the Widget Marketplace:

```
1776     <Assertion>
1777     <AssertionID>http://www.WidgetMarket.com/B</AssertionID>
1778     <Issuer>URN:WidgetMarket:PartsExchange</Issuer>
1779     <ValidityInterval>. . . </ValidityInterval>
1780     <Claims>
1781         <subject>"cn=ravi, ou=finance, id=325619"</subject>
1782         <attribute>max-purchase-limit-$100,000</attribute>
1783     </Claims>
1784 </Assertion>
```

1785 (3) User Ravi purchases farm machinery from a parts provider hosted at the Widget Marketplace.  
1786 The parts provider authorizes the transaction based on Assertion B.

1787 Even though Assertion B has been issued by the Widget Marketplace in response to assertion A  
1788 (I guess another way to look at this to view assertion A as the subject of B as in [1]) there is no  
1789 way to represent this information within SAML.

1790 If there is a problem with Ravi's purchases at the Widget Marketplace (Ravi wont pay his bills)  
1791 there is nothing in the SAML flow that ties Assertion B to Assertion A. This appears to be a  
1792 significant missing piece to me.

1793 Status: Deferred by vote on Jan 29, 2002.

1794 CLOSED ISSUE:[DS-5-02: Authenticator Reference]

1795 The authenticator element of an assertion should be able to reference another assertion, used  
1796 solely for authentication.

1797 Status: Closed by vote on Sept 4. This approach was not used.

1798 CLOSURE ISSUE:[DS-5-03: Role Reference]  
1799 The role element should be able to reference another assertion that asserts the attributes of the  
1800 role.  
1801 Status: Closed by vote on Sept 4. Role is no longer part of the core schema.

1802 CLOSURE ISSUE:[DS-5-04: Request Reference]  
1803 There should be a way to reference an assertion as the subject of a request. For example, a  
1804 request might reference an Attribute Assertion and ask if the subject of that assertion could  
1805 access a specified object.  
1806 Status: Closed by vote of the TC on March 12, 2002. AssertionSpecifier has been dropped.

1807

1807 **Group 6: Attributes**

1808 DEFERRED ISSUE:[DS-6-01: Nested Attributes]

1809 Should SAML support nested attributes? This means that for example, a role could be a member  
1810 of another role. This is one standard way of distinguishing the semantics of roles from groups.

1811 There are many issues of semantics and pragmatics related to this. These include:

- 1812 1. Limit of levels if any
- 1813 2. Circular references
- 1814 3. Distributed definition
- 1815 4. Mixed attribute types.

1816 Status: Deferred by vote on Jan 29, 2002.

1817 CLOSED ISSUE:[DS-6-02: Roles vs. Attributes]

1818 Should Attributes and Roles be identified as separate objects?

1819 Status: Closed by vote on Sept 4. Core no longer contains roles.

1820 CLOSED ISSUE:[DS-6-03: Attribute Values]

1821 Should Attributes have some 'attribute-value' type structure to them?

1822 Status: Closed by vote on Sept 4. Current core defines element Attribute to have three sub-  
1823 elements, optional namespace, required name and one or more values. Values in turn may be  
1824 defined in another namespace.

1825 DEFERRED ISSUE:[DS-6-04: Negative Roles]

1826 Should there be a way to state that someone does not have a role?

1827 Status: Deferred by vote on Jan 29, 2002.

1828 CLOSED ISSUE:[DS-6-05: AttributeScope]

1829 Should the core schema specify a way to express an attributes scope, or should this be left as a  
1830 part of the structure of the attribute? Scope has essentially the same meaning as security domain.  
1831 See DS-8-01 and DS-8-03.

1832 Champion: Scott Cantor

1833 Status: Closed by vote on Jan 29, 2002. Attribute scope must be specified as a part of the  
1834 attribute structure. (Note however that Subject NameIdentifier has a specific SecurityDomain  
1835 element that roughly corresponds to the notion of attribute scope for the subject name attribute.)

1836 Note that this is not the same as Attribute Namespace. This is discussed here.

1837 <http://lists.oasis-open.org/archives/security-services/200201/msg00210.html>

1838 <http://lists.oasis-open.org/archives/security-services/200201/msg00211.html>

1839 <http://lists.oasis-open.org/archives/security-services/200201/msg00250.html>

1840 <http://lists.oasis-open.org/archives/security-services/200201/msg00251.html>

1841 <http://lists.oasis-open.org/archives/security-services/200201/msg00254.html>

1842 **CLOSED ISSUE:[DS-6-06: Multivalue Atributes]**

1843 During some Shibboleth discussions about attribute value syntax, RLBob pointed out that it  
1844 doesn't make a lot of sense to restrict the AttributeValue element to a single occurrence, since  
1845 many attributes (directory-oriented and otherwise) are multi-valued.

1846 An example is the eduPersonAffiliation attribute, which can contain one or more enumerated  
1847 values such as faculty, staff, or student.

1848 There are three immediately evident ways to encode multiple values for an attribute in an  
1849 attribute statement:

1850 1) Include the same attribute namespace/name multiple times, a la:

```
1851 <Attribute AttributeName="Affiliation" AttributeNamespace="eduPerson">  
1852   <AttributeValue xsi:type="eduPerson:AffiliationType">  
1853     staff  
1854   </AttributeValue>  
1855 </Attribute>  
1856 <Attribute AttributeName="Affiliation" AttributeNamespace="eduPerson">  
1857   <AttributeValue xsi:type="eduPerson:AffiliationType">  
1858     student  
1859   </AttributeValue>  
1860 </Attribute>
```

1861 2) Design the value to be a list, a la:

```
1862 <Attribute AttributeName="Affiliation" AttributeNamespace="eduPerson">  
1863   <AttributeValue xsi:type="eduPerson:AffiliationType">  
1864     staff student  
1865   </AttributeValue>  
1866 </Attribute>
```

1867 3) Allow more than one AttributeValue, a la:

```
1868 <Attribute AttributeName="Affiliation" AttributeNamespace="eduPerson">  
1869 <AttributeValue xsi:type="eduPerson:AffiliationType">  
1870   staff  
1871 </AttributeValue>  
1872 <AttributeValue xsi:type="eduPerson:AffiliationType">  
1873   student  
1874 </AttributeValue>  
1875 </Attribute>
```

1876 Of these three solutions, the last seems the best to me. It combines the overall brevity of solution  
1877 2 with a clearer communication of the meaning.

1878 It also would allow attribute values that are lists of simple types to be encoded without an  
1879 extension schema to define an xsi:type for the list. Affiliation isn't a good example of this,  
1880 because it's an enumeration, but in other cases, it would be an advantage.

1881 The change suggested is simply to add maxOccurs="unbounded" to the AttributeValue element  
1882 and specify that multiple values for an element may exist. The processing model for attributes is  
1883 mostly left unspecified now anyway.

1884 <http://lists.oasis-open.org/archives/security-services/200201/msg00178.html>

1885 Champion: Scott Cantor

1886 Status: Closed by vote of the TC on March 12, 2002. Change has been made.

1887

1887 **Group 7: Authentication Assertions**

1888 CLOSED ISSUE:[DS-7-01: AuthN Datetime]

1889 An Authentication Assertion should contain the date and time that the Authentication occurred.  
1890 This could be done by explicitly assigning this meaning to the IssueInstant or NotBefore elements  
1891 or create a new element containing a datetime.

1892 Possible Resolutions:

- 1893 1. Use IssueInstant in a AuthN Assertion to indicate datetime of AuthN.
- 1894 2. Use NotBefore in a AuthN Assertion to indicate datetime of AuthN.
- 1895 3. Create a new element to indicate datetime of AuthN.

1896 Status: Closed by vote on Sept 4. Current core contains AuthenticationInstant, satisfying this  
1897 issue.

1898 CLOSED ISSUE:[DS-7-02: AuthN Method]

1899 An element is required in AuthN Assertions to indicate the method of AuthN that was used. This  
1900 could be a simple text field, but the values should be registered with some central authority.  
1901 Otherwise different identifiers will be created for the same methods, harming interoperability.

1902 Core-12 addresses this issue with AuthenticationCode. CONS-12 asks: what restrictions, if any,  
1903 should be placed on the format of the contents of the AuthenticationCode element? Should this  
1904 be a closed list of possible values? Should the list be open, but with some “well-known” values?  
1905 Should we refer to another list already in existence?

1906 Are the set of values supported for the <Protocol> element (DS-8-03) essentially the same as  
1907 those required for the <AuthenticationCode> element?

1908 Status: Closed by vote on Sept 4. Current core contains AuthenticationMethod, satisfying this  
1909 issue.

1910 CLOSED ISSUE:[DS-7-03: AuthN Method Strength]

1911 SAML has identified a requirement to indicate that a negative AuthZ decision might be changed  
1912 if a “stronger” means of AuthN was used. In support of this it is useful to introduce the concept  
1913 of AuthN strength. AuthN strength is an element containing an integer representing strength of  
1914 AuthN, where a larger number is considered stronger. Individual deployments could assign  
1915 numbers to particular AuthN methods according to their policies. This would allow an AuthZ  
1916 policy to state that the required AuthN must exceed some value.

1917 Possible Resolutions:

1918 1. Add an AuthN strength element.

1919 2. Do not add an AuthN strength element.

1920 Status: Closed by vote on Jan 29, 2002. Resolution 2.

1921 CLOSED ISSUE:[DS-7-04: AuthN IP Address]

1922 Should an AuthN Assertion contain the (optional) IP Address from which the Authentication was  
1923 done? This information might be used to require that other requests in the same session originate  
1924 from the same source. Alternatively it might be used as an input to an AuthZ decision or simply  
1925 recorded in an Audit Trail.

1926 One reason not to include this information is that it is not authenticated and can be spoofed. Also  
1927 requiring that the IP address match future requests may cause spurious errors when firewalls or  
1928 proxies are used. On the other hand, many systems today use this information.

1929 This was identified as F2F#3-12.

1930 Possible Resolutions:

1931 1. Add IP Address to the AuthN Assertion schema.

1932 2. Do not add IP Address to the AuthN Assertion schema.

1933 Status: Closed by vote on Jan 29, 2002. Resolution 1.

1934 CLOSED ISSUE:[DS-7-05: AuthN DNS Name]

1935 Should the AuthN Assertion contain an (optional) DNS name, distinct from the DNS name  
1936 indicating the security domain of the Subject? If so, what are the semantics of this field?

1937 An obvious answer is that the DNS name is the result of doing a reverse lookup on the IP  
1938 Address from which the Authentication was done. This suggests that there is a relationship  
1939 between this issue and DS-7-04. Presumably if the IP Address is not included in the  
1940 specification, this field will not be either. However if IP Address is included, DNS name might  
1941 still not be.

1942 The DNS name in the subject represents the security domain that knows how to authenticate this  
1943 subject. The DNS name of authentication would reflect the location from which the  
1944 Authentication was done. These will often be different from each other.

1945 This value might be used for AuthZ decisions or Audit. Of course, a reverse lookup could be  
1946 done on the IP Address at a later time, but the result might be different. Like the IP Address, the  
1947 DNS name is not authenticated and could be spoofed, either by spoofing the IP Address or  
1948 impersonating a legitimate DNS server.

1949 This was identified as F2F#3-13.

1950 Possible Resolutions:

1951 1. Add DNS Name to the AuthN Assertion schema.

1952 2. Do not add DNS Name to the AuthN Assertion schema.

1953 Status: Closed by vote on Jan 29, 2002. Resolution 1.

1954 DEFERRED ISSUE:[DS-7-06: DiscoverAuthNProtocols]

1955 Should SAML provide a means to discover supported types of AuthN protocols?

1956 Simon Godik has suggested: One way to do it is to use AuthenticationQuery with empty  
1957 Authenticator subject. Then SAMLRequest will carry AuthenticationAssertion with  
1958 Authenticator subject listing acceptable protocols.

1959 The problem is that Authenticator element does not allow for 0 occurrences of Protocol.  
1960 Should we specify minOccurs=0 on Protocol element for that purpose?

1961 Possible Resolutions:

1962 1. Declare AuthN Protocol discovery out of scope for SAML V1.0.

1963 2. Support it in the way suggested.

1964 3. Support it some other way.

1965 Status: Deferred by vote on Jan 29, 2002.

1966

1966 **Group 8: Authorities and Domains**

1967 The following points are generally agreed.

- 1968 • An Assertion is issued by an Authority.
- 1969 • Assertions may be signed.
- 1970 • The name of a subject must be qualified to some security domain.
- 1971 • Attributes must be qualified by a security domain as well.
- 1972 • Nigel Edwards has suggested that resources also need to be qualified by domain.

1973 **CLOSED ISSUE:[DS-8-01: Domain Separate]**

1974 Stephen Farrell has pointed out that there may be a requirement to encrypt, for example, the user  
1975 name but not the domain. Therefore they should be in separate elements. If domains are going to  
1976 appear all over the place, maybe we need a general way of having element pairs or domain and  
1977 "thing in domain."

1978 Possible Resolutions:

- 1979 1. Domains will always appear in a distinct element from the item in the domain
- 1980 2. The domain and item may be combined in a single element.

1981 Status: Closed by vote on Jan 29, 2002. Resolution 1. Core defines SecurityDomain as a sub-  
1982 element of NameIdentified, which is one of the elements for specifying Subject

1983 **CLOSED ISSUE:[DS-8-02: AuthorityDomain]**

1984 Should SAML take any position on the relationship between the 1) Authority, 2) the entity that  
1985 signed the assertion, and 3) the various domains scattered throughout the assertion? For example,  
1986 the Authority and Domain could be defined to be the same thing. Alternatively, Authorities could  
1987 assert for several domains, but each domain would have only one authority. Another possibility  
1988 would be to require that the domain asserted for be the same as that found in the Subject field of  
1989 the PKI certificate used to sign the assertion.

1990 The contrary view is that is a matter for private arrangement among asserting and relying parties.

1991 At F2F #3 this issue was raised in the form of:

- 1992 • F2F#3-15: Can an Authentication Authority issue assertions "for" ("from") multiple  
1993 domains?

- 1994  
1995
- F2F#3-16: Can multiple Authentication Authorities issue assertions "for" a given single domain?
- 1996  
1997  
1998
- The general consensus from F2F #3 was that an Authority (Asserting Party) of any type can issue Assertions about multiple domains and multiple Authorities can issue Assertions about the same domain. However, this issue has not been officially closed.
- 1999  
2000  
2001
- Status: Closed by vote on Sept 4. There is nothing in the current core to prevent Authorities from issuing Assertions about Subjects in multiple domains or to prevent multiple Authorities from issuing Assertions about Subjects in the same domain.
- 2002
- CLOSED ISSUE:[DS-8-03: DomainSyntax]
- 2003  
2004  
2005
- What is the composition of a “security domain” specifier? What is their syntax? What do they designate? Are they arbitrary or are they structured? JeffH has suggested that they are essentially the same as Issuer identifiers.
- 2006
- This was identified as F2F#3-11.
- 2007  
2008
- Core-12 addresses this issue with SecurityDomain. CONS-08 asks: Should the type of the <SecurityDomain> element of a <NameIdentifier> have additional or different structure?
- 2009  
2010
- Status: Closed by vote on Jan 29, 2002. Core specifies subject’s SecurityDomain as a string. The description says that interpretation is left to implementations
- 2011
- CLOSED ISSUE:[DS-8-04: Issuer]
- 2012  
2013
- Does the specification (core-12) need to further specify the Issuer element? Is a string type adequate for its use in SAML? See also DS-4-04.
- 2014
- This was identified as CONS-05.
- 2015
- Status: Closed by vote on Jan 29, 2002. Core specifies a required Issuer element as a string
- 2016
- CLOSED ISSUE:[DS-8-05: Issuer Confirmation]
- 2017  
2018  
2019
- Should assertions provide a Issuer Confirmation similar to the Subject Confirmation? It could be used to provide information about the Issuer, such as Public Key. This was proposed by Amir Herzberg on the public comment list.
- 2020
- <http://lists.oasis-open.org/archives/security-services-comment/200202/msg00000.html>
- 2021
- Status: This issue was closed because it failed to attract a Champion from the TC.

- 2022 CLOSED ISSUE:[DS-8-06: Issuer Format]
- 2023 I think the reasoning that justifies the "Format" attribute for Subject NameIdentifier applies
- 2024 equally well to Issuer, since Issuer names also will come in the same several standard formats as
- 2025 well as non-standard ones, and it would be useful for RPs to be able to distinguish these.
- 2026 <http://lists.oasis-open.org/archives/security-services/200203/msg00016.html>
- 2027 Champion: RL Bob Morgan
- 2028 Status: Closed by vote of TC on March 19, 2002. Withdrawn for lack of interest.
- 2029

## 2029 **Group 9: Request Handling**

2030 **CLOSED ISSUE:[DS-9-01: AssertionID Specified]**

2031 SAML should define the responses to requests that specify a particular AssertionID. For  
2032 example,

- 2033 • What if the assertion doesn't exist or has expired?
- 2034 • What if the assertion contents do not match the request?
- 2035 • Is it ever legal to send a different assertion?

2036 **Status: Closed by vote of the TC on April 9, 2002. The required behavior has been specified.**

2037 **DEFERRED ISSUE:[DS-9-02: MultipleRequest]**

2038 Should SAML provide a means of requesting multiple assertion types in a single request? This  
2039 has been referred to as "boxcaring." In simplest form this could consist of concatenating several  
2040 defined requests one message. However there are usecases in which it would convenient to have  
2041 the second request use data from the results of the first.

2042 For example, it would be useful to ask for an AuthN Assertion by ID and for and Attribute  
2043 Assertion referring to the same subject.

2044 **Potential Resolutions:**

- 2045 1. Do not specify a way to make requests for multiple assertions types in SAML V1.0.
- 2046 2. Allow simple concatenation of requests in one message.
- 2047 3. Provide a more general scheme for multiple requests.

2048 **Status: Deferred by vote on Jan 29, 2002.**

2049 **DEFERRED ISSUE:[DS-9-03: IDandAttribQuery]**

2050 Should SAML allow queries containing both an Assertion ID and Attributes?

2051 Tim Moses comments: The need to convey an assertion id and attributes in the same query arises  
2052 in the following circumstances.

2053 **[Text Removed to Archive]**

2054 **Possible Resolutions:**

2055 1. Allow queries to specify both an Assertion ID and Attributes

2056 2. Only allow queries to specify one or the other.

2057 Status: Deferred by vote on Jan 29, 2002.

2058 CLOSED ISSUE:[DS-9-04: AssNType in QuerybyArtifact]

2059 When an Assertion is requested by providing an Artifact, there should be a way to refer to which  
2060 type of Assertion is being requested. Originally, an Artifact referred to a specific Assertion, so  
2061 this was not required. However, under current design, an Artifact may refer to both an  
2062 Authentication Assertion and an Attribute Assertion.

2063 Champion: Simon Godik

2064 Status: Closed by vote on Jan 29, 2002. Artifact now refers to a specific Assertion. Assertions  
2065 may contain multiple statements of the same or different types. For example, a single Artifact  
2066 may be used to retrieve a single assertion with both Authentication and Attribute statements.

2067 DEFERRED ISSUE:[DS-9-05: RequestAttributes]

2068 We should be able to pass request attributes to the issuing party.

2069 I would like to propose addition to the RequestType:

```
2070 <complexType name="RequestType">
2071   <complexContent>
2072     <extension base="samlp:RequestAbstractType">
2073       <sequence>
2074         <element ref="saml:Attribute" minOccurs="0" maxOccurs="unbounded"/>
2075         <choice>
2076           -- same as before --
2077         </choice>
2078       </sequence>
2079     </extension>
2080   </complexContent>
2081 </complexType>
```

2082 Champion: Simon Godik

2083 Status: Deferred by vote of the TC on March 12, 2002.

2084 CLOSED ISSUE:[DS-9-06: Locate AttributeAuthorities]

2085 Should an Authentication Assertion provide the means to locate Attribute Authorities with  
2086 information about the same subject?

2087 Context here is that Authentication Authority can front several Attribute Authorities  
 2088 as in the case of Shibboleth. Authentication Authority should be able to point  
 2089 to the correct Attribute Authority for authenticated subject by including information  
 2090 about Attribute Authority in AuthenticationAssertion.

2091 Proposed text:

2092  
 2093 SAML assumes that given authentication assertion relying party can find  
 2094 attribute authority for the authenticated subject.

2095 In a more dynamic situation Authentication Authority can be placed in front  
 2096 of a number of Attribute Authorities. In this case Authentication Authority  
 2097 may want to direct relying parties to the specific Attribute Authorities at the  
 2098 time when authentication assertion is issued.

2099 AuthorityBinding element specifies the type of authority (authentication, attribute,  
 2100 authorization) and points to it via URI. AuthenticationStatementType contains optional  
 2101 list of AuthorityBinding's. All AuthorityBinding's in the list must be of the 'attribute' type.  
 2102 Any authority pointed to by the AuthorityBinding list may be queried by the relying party.

2103 <element name="AuthorityBinding" type="saml:AuthorityBindingType"/>

2104 <complexType name="AuthorityBindingType">

2105     <attribute name="AuthorityKind">

2106         <simpleType>

2107             <restriction base="string">

2108                 <enumeration value="authentication"/>

2109                 <enumeration value="attribute"/>

2110                 <enumeration value="authorization"/>

2111             </restriction>

2112         </simpleType>

2113     </attribute>

2114     <attribute name="Binding" type="anyURI"/>

2115 </complexType>

2116     <element name="AuthenticationStatement" type="saml:AuthenticationStatementType"/>

2117     <complexType name="AuthenticationStatementType">

2118         <complexContent>

2119             <extension base="saml:SubjectStatementAbstractType">

2120                 <sequence>

2121                     <element ref="saml:AuthenticationLocality" minOccurs="0"/>

2122                     <element ref="saml:AuthorityBinding" minOccurs="0"

2123                     maxOccurs="unbounded"/>

2124                 </sequence>

2125             <attribute name="AuthenticationMethod" type="anyURI"/>

2126 <attribute name="AuthenticationInstant" type="dateTime"/>  
2127 </extension>  
2128 </complexContent>  
2129 </complexType>

2130 Champion: Simon Godik

2131 Status: Closed by vote of the TC on March 12, 2002. This feature has been added.

2132 CLOSED ISSUE:[DS-9-07: Request Extra AuthzDec Info]

2133 Should the Authorization Decision Request be able to request additional information relating to  
2134 the Actions specified?

2135 Champion: Simon Godik

2136 Status: Closed by vote on Jan 29, 2002. This feature was not adopted.

2137 CLOSED ISSUE:[DS-9-08: No Attribute Values in Request]

2138 Is it intended that when AttributeDesignator from the saml: namespace is reused in the protocol  
2139 schema (for an AttributeQuery), you're supposed to supply the AttributeValue? I would think  
2140 that in an assertion you do want to spell out an attribute value, but in a query you just want to ask  
2141 for the attribute of the specified name, without parameterizing it by the value.

2142 E.g., if I want to know the PaidStatus of a subscriber to a service, I would just say "Please give  
2143 me the value of the PaidStatus attribute" -- I wouldn't say "Please give me the  
2144 PaidStatus=PaidUp attribute". Right??

2145 If we want to change this, we would need to have something like a base AttributeDesignatorType  
2146 (and an AttributeDesignator element) in saml: that just has AttributeName and  
2147 AttributeNamespace (currently XML attributes). Then we should extend it in samlp: to get an  
2148 AttributeValueType (and an AttributeValue element) that adds an element called AttributeValue.

2149 Champion: Eve Maler

2150 Status: Closed by vote on Jan 29, 2002. AttributeQuery now contains AttributeDesignator.

2151 CLOSED ISSUE:[DS-9-09: Drop CompletenessSpecifier]

2152 CompletenessSpecifier was intended to control the behavior of requests for Attribute Assertions,  
2153 when an Authority could only partly fulfill requests for enumerated attributes. However, much  
2154 confusion was generated over the proper behavior, error responses and general motivation for  
2155 this feature. It is proposed that the CompletenessSpecifier be dropped entirely.

2156 Champion: Eve Maler

2157 Status: Closed by vote on Jan 29, 2002. CompletenessSpecifier has been dropped.

2158 CLOSED ISSUE:[DS-9-10: IssueInstant in Req&Response]

2159 Should IssueInstant be added to Request and Response messages? This would allow  
2160 implementations to prevent replay attacks in environments where these are not prevented by  
2161 other means.

2162 Champion: Scott Cantor

2163 Status: Closed by vote of the TC on March 12, 2002. This change has been made.

2164 CLOSED ISSUE:[DS-9-11: Resource in Attribute Query]

2165 In the message

2166 <http://lists.oasis-open.org/archives/security-services/200110/msg00087.html>

2167 of 2001-10-15, Marlena Erdos proposed the addition of an additional schema element to the  
2168 SAML attribute query. We discussed this in some detail at the Nov 13-14 F2F and took a vote to  
2169 include it, pending the creation of more explanatory text regarding the element that would be  
2170 included in the SAML spec. This note provides the requested text.

2171 This proposal is specific to the inclusion of context in attribute queries, and does not address  
2172 broader, more complex, use cases in which arbitrary context might be useful, such as in  
2173 authorization decision queries. The requirements for that are sufficiently different as to warrant a  
2174 separate proposal (if desired by others in the committee).

2175 Marlena's note provides extensive rationale for the element, in terms of meeting Shibboleth  
2176 requirements. At the F2F we tried to justify it in more general terms. Here is an attempt at  
2177 writing that down.

2178 Consider the exchange between a requester Q, which generates a request containing an  
2179 AttributeQuery (core-20, section 2.4.1), and a responder R which responds with an assertion  
2180 containing an AttributeStatement (core-20, section 1.6.1). When preparing its response, R can  
2181 take into account these aspects of the request:

2182 Subject: Obviously the main thing.

2183 Identity of requester: Though not a distinguished schema element, presumably in most  
2184 situations the request would be authenticated via a security mechanism in some  
2185 binding. This permits the responder to apply access control to returned attributes based  
2186 on the identity of the requester.

2187 Requested attributes: Via the Attribute element in the query the requester can indicate its  
2188 interest in having particular attributes be returned.

2189 (Obviously R can apply whatever other policy it wants as well.)

2190 The use of the items above can support reasonable optimization and least-privilege: the requester  
 2191 can ask for just what it wants, and the responder can restrict the attributes it provides to only  
 2192 those the requester is allowed to see. However, there is a system design that we think is likely to  
 2193 occur often that it doesn't support well, and that is where a number of "application domains" (ie,  
 2194 entities about which distinct policy might be set about which attributes should be used) make use  
 2195 of a single requester (ie, a single requesting identity). This kind of system could exist for many  
 2196 reasons: the typical "portal" scenario; a single web server supporting applications for different  
 2197 departments in an organization; a single web front end for several distinct non-web backend  
 2198 systems. In this situation we would like the responder to base its response not only on the  
 2199 requester identity but in which application domain the attributes will be used.

2200 Clearly it would be possible to always deploy systems such that each distinct "application  
 2201 domain" is represented by a distinct requesting identity. However, this imposes what seems to us  
 2202 a needless burden on application deployment, e.g. having to generate and manage a separate  
 2203 requester client certificate for each application behind a portal. It is very useful, instead, for an  
 2204 attribute query to contain an additional element, other than subject and requester, specifying  
 2205 further context that the responder can use to decide which attributes to respond with.

2206 We propose that support for this element is optional (i.e., a conforming implementation doesn't  
 2207 have to support it), so this feature should not unduly affect attribute responder implementations  
 2208 that do not wish to support it. A responder that wishes to ignore the element can do so, and  
 2209 return attributes just as if the element weren't present. A responder that wishes to reject use of the  
 2210 element can do so by responding with the proposed error code.

2211 Proposed schema and text is below (lines based on core-19). The reference to a SAML status is  
 2212 of course preliminary, pending final design of SAML status codes.

2213 In the AttributeQueryType type definition, add the following attribute before line 918:

2214 `<attribute name="Resource" type="anyURI" minOccurs="0"/>`

2215 Before line 907, add the following text:

2216 `<Resource> [Optional]`

2217 The `<Resource>` attribute specifies the URI of a resource which is relevant to the request for  
 2218 attributes. If present, the responding entity MAY use the information in determining the set of  
 2219 attributes to return to the requesting entity.

2220 If the responding entity does not wish to support resource-specific attribute queries, or if the  
 2221 resource value provided is invalid or unrecognized, then it SHOULD respond with a SAML  
 2222 status of "Error.Server.ResourceNotRecognized".

2223 <http://lists.oasis-open.org/archives/security-services/200112/msg00004.html>

2224 Champion: RL 'Bob' Morgan

2225 Status: Closed by vote of the TC on March 12, 2002. This has been added.

2226 CLOSED ISSUE:[DS-9-12: Respondwith underspecified]

2227 At f2f#5 we agreed to include the "RespondWith" element. However, no agreement was reached  
2228 on the semantics of this element as well as its interaction with error conditions.

2229 Is this an advisory element (i.e., essentially useless)? If so, why are we including it in the draft?

2230 As an alternative it could be considered a hard requirement; in other words, if a requestor  
2231 submits a <RespondWith> value of "AuthenticationStatement", then the responder MUST  
2232 respond with an assertion containing an AuthenticationStatement OR return an error response.  
2233 Of course, this does not cover the case when multiple assertions are returned (e.g., lookup by  
2234 assertion id, for example). Does it mean every returned assertion MUST contain a  
2235 "Authentication Statement"?

2236 Additional example of complexity abound. Another example is given in message:

2237 <http://lists.oasis-open.org/archives/security-services/200201/msg00123.html>

2238 We have not discussed these processing rules at all. In their absence, the <RespondWith>  
2239 element adds additional complexity and confusion to the draft.

2240 Potential Resolutions:

- 2241 1. remove section 3.2.1.1 and the <RespondWith> element
- 2242 2. drastically simplify its contents (for example, we can probably give simple processing  
2243 rules for the schema URI case).
- 2244 3. provide detailed processing rules for all of the cases.

2245 <http://lists.oasis-open.org/archives/security-services/200201/msg00136.html>

2246 Champion: Prateek Mishra

2247 Status Closed by vote of the TC on April 9, 2002. The processing rules have been specified.

2248 CLOSED ISSUE:[DS-9-13: AuthNQuery underspecified]

2249 Scenario: A requester sends a SAML request containing an AuthenticationQuery specifying  
2250 some Subject. If the responder cannot find or construct a matching assertion (for whatever  
2251 reason), what StatusCode value should be returned in the Response?

2252 <http://lists.oasis-open.org/archives/security-services/200202/msg00174.html>

- 2253 Champion: Jeff Hodges
- 2254 Status: Closed by vote of the TC on April 9, 2002. This was resolved as a side effect of  
2255 addressing DS-4-14.
- 2256 CLOSED ISSUE:[DS-9-14: Malformed Request]
- 2257 I am assuming that the correct SAML status code to use when a request is badly malformed (or is  
2258 simply missing from the SOAP payload) is "Sender"; that is, there has been an error "in the  
2259 sender or in the request".
- 2260 But what should the InResponseTo attribute on the response be, if the request didn't, say, even  
2261 have an ID or any innards at all?
- 2262 <http://lists.oasis-open.org/archives/security-services/200203/msg00000.html>
- 2263 Champion: Eve Maler
- 2264 Status: Closed by vote of the TC on April 9, 2002. InResponseTo has been made optional and  
2265 this case has been clarified.
- 2266 CLOSED ISSUE:[DS-9-15: Confirm in Query]
- 2267 Should a Query (SubjectQuery) contain a full subject or just the NameIdentifier part? The use of  
2268 the ConfirmationMethod in Queries can lead to incorrect usage of the protocol and/or security  
2269 risks.
- 2270 <http://lists.oasis-open.org/archives/security-services/200203/msg00129.html>
- 2271 Champion: Hal Lockhart
- 2272 Status: Closed by vote of the TC on April 9, 2002. Text clarify the security risk and how to avoid  
2273 it has been added.
- 2274 CLOSED ISSUE:[DS-9-16: AuthNMethod in AuthnQuery]
- 2275 In the AuthenticationQuery, it is possible to provide an optional ConfirmationMethod. This  
2276 should be an AuthenticationMethod.
- 2277 <http://lists.oasis-open.org/archives/security-services/200203/msg00130.html>
- 2278 Champion: Hal Lockhart
- 2279 Status: Closed by vote of the TC on April 9, 2002. The indicated change has been made.
- 2280

2280 **Group 10: Assertion Binding**

2281 CLOSED ISSUE:[DS-10-01: AttachPayload]

2282 There is a requirement for assertions to support some structure to support their "secure  
2283 attachment" to payloads. This is a blocking factor to creating a SOAP profile or a MIME profile.  
2284 If needed, the bindings group can make a design proposal in this space but we would like input  
2285 from the broader group.

2286 Status: Closed by vote on Jan 29, 2002. The SOAP Profile specifies two different ways to do  
2287 this.

2288

2288 **Group 11: Authorization Decision Assertions**

2289 DEFERRED ISSUE:[DS-11-01: MultipleSubjectAssertions]

2290 It has been proposed (WhiteboardTranscription-01.pdf section 4.0) that an Authorization  
2291 Decision Assertion Request (and presumably the Assertion sent in response) may contain  
2292 multiple subject Assertions (or their Ids). Must these assertions all refer to the same subject or  
2293 may they refer to multiple subjects.

2294 One view is that the assertions all provide evidence about a single subject who has requested  
2295 access to a resource. For example, the request might include a Authentication Assertion and one  
2296 or more Attribute Assertions about the same person.

2297 Another view is that for efficiency or other reasons it is desirable to ask about access to a  
2298 resource by multiple individuals in a single request. This raises the question of how the PDP  
2299 should respond if some subjects are allowed and others are not.

2300 The PDP might have the freedom to return a single, all encompassing Assertion in response or  
2301 reduce the request in order to give a positive response or return multiple Assertions with positive  
2302 and negative indications.

2303 Identified as F2F#3-30 and F2F#3-31.

2304 Possible Resolutions:

- 2305 1. Require that all the assertions and assertion ids in a request refer to the same subject.
- 2306 2. Treat assertions with different subjects as requesting a decision for each of the subjects  
2307 mentioned.
- 2308 3. Treat assertions with different subjects and a question about the collective group, i.e. true  
2309 only if access is allowed for all.
- 2310 4. Allow multiple subjects, but assign some other semantic to such a request.

2311 Status: Deferred by vote on Jan 29, 2002.

2312 CLOSED ISSUE:[DS-11-02: ActionNamespacesRegistry]

2313 Authorization Decision Assertions contain an object and an action to be performed on the object.  
2314 Different types of actions will be appropriate in different situations, so an action will be qualified  
2315 by an XML namespace. Should a public registry of namespaces be established somewhere? This  
2316 would allow groups applying SAML to different fields of interest to define appropriate syntaxes.

2317 This was identified as F2F#3-32. It relates to MS-2-01 and DS-7-02.

2318 Identified as CONS-14.

2319 Possible Resolutions:

2320 1. Establish an action namespace registry.

2321 2. Do not establish an action namespace registry.

2322 Status: Closed by vote on Jan 29, 2002. Resolution 1. The TC voted to maintain its own registry  
2323 at OASIS.

2324 CLOSED ISSUE:[DS-11-03: AuthzNDecAssnAdvice]

2325 Should Authorization Decision Assertions contain an Advice field? If so, what are the semantics  
2326 of Advice? It has been proposed that Conditions and Advice be fields that allow additional  
2327 information relative to the Assertion to be included. The distinction being that a relying party  
2328 could safely ignore items in Advice that it does not understand, but should discard an Assertion  
2329 if it does not understand all the Conditions.

2330 Such as scheme would allow for backward compatibility between SAML versions and/or the  
2331 possibility of proprietary usages.

2332 This was identified as F2F#3-33 and F2F#3-34.

2333 Note this is closely related to DS-14-01.

2334 Possible Resolutions:

2335 1. Include Advice in AuthZDecAssns.

2336 2. Do not include Advice in AuthZDecAssns.

2337 Status: Closed by vote on Sept 4. Current core specifies an Advice element in all Assertion types.

2338 CLOSED ISSUE:[DS-11-04: DecisionTypeValues]

2339 CONS-13 asks: does {Permit, Deny, Indeterminate} (as proposed in core12) cover the range of  
2340 decision answers we need? See also discussion in [ISSUE:F2F#3-33]. (This is DS-11-03, not  
2341 clear how this relates. ed.)

2342 Status: Closed by vote on Jan 29, 2002. These three values have been accepted.

2343 CLOSED ISSUE:[DS-11-05: MultipleActions]

2344 The F2F #3 left it somewhat unclear if multiple actions are supported within an <Object>. There  
2345 is clear advantage to this type of extension (as defined in core-12) as it provides a simple way to  
2346 aggregate actions. Given that actions are strings (as opposed to pieces of XML) this does seem to

2347 provide additional flexibility within the SAML framework.

2348 Does the TC support this type of flexibility?

2349 This was identified as CONS-15.

2350 Status: Closed by vote on Sept 4. Current schema allows multiple Actions to be specified.

2351 CLOSED ISSUE:[DS-11-06: Authz Decision]

2352 Change the names of AuthorizationStatement and AuthorizationQuery to  
2353 AuthorizationDecisionStatement and AuthorizationDecisionQuery to eliminate ambiguity.

2354 Early in the process of this committee we decided, after much contention and explanation and  
2355 careful thought about concepts and terminology, that one of our three assertions (now statements,  
2356 of course) is an "Authorization Decision Assertion", where that name precisely captures the  
2357 intent of the structure. In particular we observed as part of that discussion that the single word  
2358 "authorization" by itself can mean so many different things that it has to be qualified to be  
2359 useful. The text of core-20, in section 1, uses the term "Authorization Decision Assertion", and  
2360 section 1.5 has this phrase as its title.

2361 However, the actual name of the element, as specified in section 1.5 and elsewhere, is  
2362 "AuthorizationStatement". And, the name of the corresponding query element, as specified in  
2363 section 2.5, is "AuthorizationQuery". It seems to me that these names are misleading and should  
2364 be changed. This is especially true since a likely user of our statement structures is the XACML  
2365 work, which (though I haven't followed it) is supposedly about managing and expressing  
2366 authorization information.

2367 So, I strongly suggest that these elements be renamed "AuthorizationDecisionStatement" and  
2368 "AuthorizationDecisionQuery" and that the corresponding types be similarly renamed.

2369 Champion: Bob Morgan

2370 Status: Closed by vote on Jan 29, 2002. The elements in question have been renamed.

2371 CLOSED ISSUE:[DS-11-07: Indeterminate Result]

2372 Should the Indeterminate Decision type be dropped? If not it should be clarified. This was  
2373 proposed by SAP on the public comment list as item #1.

2374 <http://lists.oasis-open.org/archives/security-services-comment/200202/msg00008.html>

2375 Champion: Phillip Hallam-Baker

2376 Status: Closed. Deemed to have been satisfied by text proposed in:

2377 <http://lists.oasis-open.org/archives/security-services/200203/msg00081.html>.

2378 CLOSED ISSUE:[DS-11-08: Actions and Action]

2379 It is proposed we remove Actions and change Action to mirror the structure of NameIdentifier.  
2380 Note that when this schema was discussed at one of the F2F meetings, it was argued that it  
2381 would be relatively common for AuthorizationDecisionQueryys to ask about more than one action  
2382 from the same namespace at the same time, and thus the existing schema would be more concise.  
2383 My feeling is that this isn't enough to justify a different style of namespace/name structure.

2384 <http://lists.oasis-open.org/archives/security-services/200202/msg00186.html>

2385 Champion: Irving Reid

2386 Status: Closed by vote of the TC on April 9, 2002. The recommended change has been made.

2387

2387 **Group 12: Attribute Assertions**

2388 **CLOSED ISSUE:[DS-12-01: AnyAllAttrReq]**

2389 Should an Attribute Assertion Request be allowed to specify “ANY” and/or “ALL”? If so, what  
2390 attributes should be returned and should an error be returned in for ANY and for ALL in each of  
2391 the following case:

2392 **[Text Removed to Archive]**

2393 Status: Closed by vote on Sept 4. At that time the core schema proposed a choice of “Partial” of  
2394 “AllOrNone” in the CompletenessSpecifier. (The CompletenessSpecifier was subsequently  
2395 dropped entirely.)

2396 **CLOSED ISSUE:[DS-12-02: CombineAttrAssnReqs]**

2397 It has been proposed (WhiteboardTranscription-01.pdf section 4.0) that it be possible 1) to  
2398 request all of the attributes of a subject and also 2) to request ANY and/or ALL attributes (with  
2399 specific error semantics. Can requests of type 1 and 2 be accommodated in a single request  
2400 structure? If not, the reasons for having distinct types should be documented.

2401 This was identified as F2F#3-21.

2402 PRO-03 asks if core-12 satisfies this issue.

2403 Possible Resolutions:

2404 1. Combine the requests.

2405 2. Leave them as distinct types and document the reason.

2406 Status: Closed by vote on Sept 4. Both all and specified attributes can be requested.

2407 **DEFERRED ISSUE:[DS-12-03: AttrSchemaReqs]**

2408 Should it be possible to request only the Attribute schema?

2409 This was identified as F2F#3-22.

2410 Possible Resolutions:

2411 1. Allow Attribute Schema Requests.

2412 2. Do not allow Attribute Schema Requests.

2413 Status: Deferred by vote on Jan 29, 2002.

2414 DEFERRED ISSUE:[DS-12-04: AttrNameReqs]

2415 Should it be possible to request only attribute names and not values? It is not clear whether these  
2416 would be all the attributes the Attribute Authority knows about or just the ones pertaining to a  
2417 particular subject. It is not clear what this would be used for. No usecase seems to require it.

2418 This was identified as F2F#3-23.

2419 This was identified as PRO-04.

2420 Possible Resolutions:

2421 3. Allow Attribute Name Requests.

2422 4. Do not allow Attribute Name Requests.

2423 Status: Deferred by vote on Jan 29, 2002.

2424 CLOSED ISSUE:[DS-12-05: AttrNameValueSyntax]

2425 What is the syntax of attribute names and values? Should attribute names be qualified by an xml  
2426 namespace? Should an attribute value be a monolithic opaque thing, with any internal syntax  
2427 agreed to out-of-band, or something with perceivable-in-protocol-context internal structure?  
2428 Does the use of XPath [<http://www.w3.org/TR/xpath>] in AttrAssnReqs mitigate the  
2429 restrictiveness of having attr values being monolithic opaque things, presumably where the value  
2430 is actually XML encoded and having arbitrarily complexity?

2431 • One possible approach is to use XPath in AttrAssnReqs.

2432 • Another approach is to define a very simple name/value pairs. A problem with this is  
2433 that, if the users/developers want to formulate any kind of structured values, they have to  
2434 flatten them into the SAML-defined thing. Thus the concern is how do we allow for  
2435 flexible (i.e. complex) value structures without unduly complicating AttrAssnReqs &  
2436 AttrAssnResps?

2437 This was identified as F2F#3-28, F2F#3-29 and F2F#3-37.

2438 PRO-06 asks if the simple queries proposed in core-12 are sufficient.

2439 Status: Closed by vote on Sept 4. Schema allows both names and values to have namespaces.

2440 CLOSED ISSUE:[DS-12-06: RequestALLAttrbs]

2441 How should a request for all available attributes be made? Some have objected to the idea that if  
2442 no attributes are specified it means “all”.

2443 This should not be confused with the Completeness Specifier AllOrNothing (formerly ALL)

2444 which controls what should be returned when a request cannot be fully satisfied.

2445 Potential Resolutions:

2446 1. Declare an empty list of attributes to mean “all attributes.”

2447 2. Define a reserved keyword, such as “AllAttributes” for this purpose.

2448 Status: Closed by vote of the TC on April 9, 2002. Resolution 1 has been adopted.

2449 CLOSED ISSUE:[DS-12-07: Remove AttributeValueType]

2450 It is proposed to remove the AttributeValue type and set the type of AttributeValue directly to  
2451 the anyType. This would remove nothing functionally from the AttributeValue and allows us to  
2452 do the sort of direct xsi:type-ing that Chris mentioned in his earlier posts.

2453 <http://lists.oasis-open.org/archives/security-services/200201/msg00019.html>

2454 <http://lists.oasis-open.org/archives/security-services/200112/msg00006.html>

2455 <http://lists.oasis-open.org/archives/security-services/200112/msg00025.html>

2456 Champion: RL 'Bob' Morgan

2457 Status: Closed by vote of the TC on March 12, 2002. This has been removed.

2458 DEFERRED ISSUE:[DS-12-08: Delegation]

2459 Should SAML provide assertion statements concerning delegation? Proposed by Nell Rehn on  
2460 the public comment list.

2461 <http://lists.oasis-open.org/archives/security-services-comment/200202/msg00009.html>

2462 Champion: Hal Lockhart

2463 Status: Deferred.

2464

2464 **Group 13: Dynamic Sessions**

2465 DEFERRED ISSUE:[DS-13-01: SessionsinEffect]

2466 How can a relying party determine if dynamic sessions are in effect? If dynamic sessions are in  
2467 effect it will be necessary to determine if the session has ended, even if the relevant Assertions  
2468 have not yet expired. However, if dynamic sessions are not in use, attempting to check session  
2469 state is likely to increase response times unnecessarily.

2470 This was identified as F2F#3-3.

2471 Proposed Resolutions:

- 2472 1. Define a field in Assertion Headers to indicate dynamic sessions.
- 2473 2. Configure the implementation based on some out of band information.

2474 Status: Deferred by vote on Jan 29, 2002.

2475

2475 **Group 14:General – Multiple Message Types**

2476 CLOSED ISSUE:[DS-14-01: Conditions]

2477 Should Assertions contain Conditions and if so, what items should be included under conditions  
2478 and what should the semantics of conditions be?

2479 It has been proposed that Conditions and Advice be fields that allow additional information  
2480 relative to the Assertion to be included. The distinction being that a relying party could safely  
2481 ignore items in Advice that it does not understand, but should discard an Assertion if it does not  
2482 understand all the Conditions.

2483 In addition to general design and rationale, the following questions have been posed. Should  
2484 Audience be under Conditions? Should Validity Interval be under Conditions? What sort of  
2485 extensibility should be allowed: upward compatibility between SAML versions? Proprietary  
2486 extensions? Other types?

2487 At F2F #3, the following straw poll results were obtained:

- 2488 • Yes, we want something with the semantic of "conditions" to appear in Assertions.
- 2489 • Yes, we need to re-work the design of conditions.
- 2490 • Yes, we want to place the validity interval into the conditions (However, it was noted that  
2491 doesn't this make validity interval optional? Do we want that?)
- 2492 • "Maybe" to providing a general conditions framework
- 2493 • "Maybe" to putting audiences into conditions

2494 This was identified as F2F#3-17 and F2F#3-18.

2495 Note this is closely related to DS-11-03.

2496 Core-12 addresses this issue with ConditionsType. CONS-07 asks: Does the ConditionsType  
2497 meet the TC's requirements? If not, why not?

2498 Status: Closed by vote on Sept 4. Schema contains a Conditions element.

2499 CLOSED ISSUE:[DS-14-02: AuthenticatorRequired]

2500 It has been proposed that an Assertion may contain an Authenticator element which can be used  
2501 in any of a number of ways to associate the Assertion with a request, either directly or indirectly  
2502 via some cryptographic primitive. Should this element be a part of SAML?

2503 Basically the question is whether the complexity associated with supporting this mechanism is

2504 absolutely required or simply “nice to have.”

2505 This has been identified as F2F#3-14.

2506 Potential Resolutions:

2507 1. Include the Authenticator element.

2508 2. Do not include the Authenticator element.

2509 Status: Closed by vote on Jan 29, 2002. Core specifies a SubjectConfirmation element for this  
2510 purpose

2511 CLOSED ISSUE:[DS-14-03: AuthenticatorName]

2512 Assuming DS-14-02 is resolved affirmatively, should the Authenticator be called something  
2513 else? Suggestions include: HolderofKey and Subject Authenticator.

2514 This has been identified as F2F#3-10.

2515 Also identified as CONS-09.

2516 Status: Closed by vote on Sept 4. Schema now contains SubjectConfirmation element for this  
2517 purpose.

2518 DEFERRED ISSUE:[DS-14-04: Aggregation]

2519 Do we need an explicit element for aggregating multiple assertions into a single object as part of  
2520 the SAML specification? If so, what is the type of this element?

2521 This was identified as CONS-01.

2522 Status: Deferred by vote on Jan 29, 2002.

2523 CLOSED ISSUE:[DS-14-05: Version]

2524 Does the specification (core-12) need to further specify the version element? If so, what are these  
2525 requirements? Should this be a string? Or is an unsignedint enough?

2526 This was identified as CONS-06

2527 Status: Closed by vote on Jan 29, 2002. Core specifies major and minor version numbers, which  
2528 are integers. The protocol section describes matching rules.

2529 CLOSED ISSUE:[DS-14-06: ProtocolIDs]

2530 Core-12 proposes a <Protocol> element with the AuthenticatorType. CONS-10 suggests that the

2531 TC will develop a namespace identifier (e.g., protocol) and set of standard namespace specific  
2532 strings for the <Protocol> element above. If not, what approach should be taken here?

2533 Status: Closed by vote on Jan 29, 2002. SubjectConfirmationMethod serves this purpose.

2534 CLOSED ISSUE:[DS-14-07: BearerIndication]

2535 Core-12 proposes the following for identifying a ``bearer'' assertion: A distinguished URI  
2536 urn:protocol:bearer be used as the value of the <Protocol> element in <Authenticator> with no  
2537 other sub-elements. CONS-11 asks: Is this an acceptable design?

2538 Status: Closed by vote of the TC on April 9, 2002. A bearer URN has been defined. Not that  
2539 subject confirmation methods are now defined in profiles.

2540 CLOSED ISSUE:[DS-14-08: ReturnExpired]

2541 Should the specification make any normative statements about the expiry state of assertions  
2542 returned in response to SAMLRequests? Is it a requirement that only unexpired assertions are  
2543 returned, or is the client responsible for checking? (*Seems pretty clear that the client will have to*  
2544 *check anyway at time-of-use, so forcing the responder to check before replying seems like extra*  
2545 *processing.*)

2546 Note that regardless of how this issue is settled, Asserting Parties will be free to discard expired  
2547 Assertions at any time.

2548 Identified as PRO-01.

2549 Possible Resolutions:

2550 1. The specification will state that Asserting Parties MUST return only Assertions that have  
2551 not expired.

2552 2. The specification will state that Asserting Parties MAY return expired Assertions.

2553 3. The specification will make no statement about returning expired Assertions.

2554 Status: Closed by vote on Jan 29, 2002. Resolution 3 selected implicitly.

2555 CLOSED ISSUE:[DS-14-09: OtherID]

2556 PRO-01 states: in some instances (such as the web browser profile) it is necessary to lookup an  
2557 assertion using an identifier other than the <AssertionID>. Typically, such an identifier is opaque  
2558 and may have been created in some proprietary way by an asserting party. Do we need an  
2559 additional element in SAMLRequestType to model this type of lookup?

2560 Status: Closed by vote on Jan 29, 2002. Query by Artifact covers this functionality.

2561 CLOSED ISSUE:[DS-14-10: StatusCodes]

2562 PRO-07 asks: are the status codes listed for StatusCodeType (in core-12) sufficient? If not how  
2563 do we want to define a bigger list: keep it open with well-known values, use someone else's list,  
2564 define an extension system, etc.

2565 See also ISSUE:[F2F#3-33, 34].(Not clear the relationship. These issues are about Advice. ed.)

2566 Status: Closed by vote on Jan 29, 2002. Core specifies a Status element, which can contain  
2567 codes, subcodes, messages and details. Four basic status codes are defined.

2568 CLOSED ISSUE:[DS-14-11: CompareElements]

2569 Should SAML specify the rules for comparing various identifiers, such as Assertion IDs, Issuer,  
2570 Security Domain, Subject Name? Currently these are all specified as strings. Issues include:

- 2571 • Upper and lower case equivalence
- 2572 • Leading and trailing whitespace
- 2573 • Imbedded whitespace

2574 Possible Resolutions:

- 2575 1. Declare only exact binary matching.
- 2576 2. Define a set of matching rules.

2577 Status: Closed by vote of the TC on March 12, 2002. Matching rules have been agreed upon and  
2578 put in the spec.

2579 CLOSED ISSUE:[DS-14-12: TargetRestriction]

2580 Add a new condition type to the schema called TargetRestriction.

2581 The "Form POST" web browser profile of SAML (bindings-06, section 4.1.6) identifies a  
2582 particular security threat (4.1.6.1.1, bullet 3), which is that a malicious site, receiving an asserted  
2583 authentication statement via POST, might replay the assertion to some other site, in an attempt to  
2584 pose as the subject of the statement (ie, the authenticated user). The identified countermeasure  
2585 for this threat is to include information in the assertion that restricts its use to the site to which  
2586 the POST is done. In that case, if the malicious site attempts to replay the assertion somewhere  
2587 else, the receiver will see the mismatch and reject the assertion.

2588 Up to now the profile has called for the use of the AudienceRestrictionCondition element to  
2589 carry this information. However, we have argued that this condition, though similar, is actually  
2590 different in use, so a new condition is needed. There was discussion of this point at the recent  
2591 F2F in San Francisco, and the group agreed to add a new condition for this purpose.

2592 The justifications are as follows. First, the existing text on AudienceRestrictionCondition (core-  
2593 20, section 1.7.2) describes a more policy-based use, to limit the use of the assertion to receivers  
2594 conforming to some policy statement. Shibboleth, for example, would use this condition to  
2595 indicate that an assertion conforms to conditions including non-traceability of subject name, user  
2596 agreement with attribute release, etc. This description would have to be rewritten to also support  
2597 the more specific restriction required by the POST profile (which could be done).

2598 A more telling issue is matching. While the current description of Audience doesn't say how  
2599 matching is done (should it?), it seems likely that in practice these policy URIs would be  
2600 complete and opaque; that is, the receiver would simply do a string match on its available set of  
2601 policy URIs. A URI "http://example.com/policy1" has no necessary relation to  
2602 "http://example.com/policy2". On the other hand, for the POST profile, the most likely approach  
2603 would be for the assertion issuer to include the entire target URL in the assertion. The assertion  
2604 receiver would then have to match on some substring of the URL to determine whether to accept  
2605 the assertion. If the same condition were to be used for both purposes the receiver would have to  
2606 do matching based on the value of the URI, which seems suboptimal.

2607 Cardinality is another issue. It's reasonable for multiple AudienceRestriction elements to be  
2608 included to indicate that the recipient should be bound by all the indicated policies. But it  
2609 doesn't really make sense to say the recipient has to be named by multiple names.

2610 Champion: Bob Morgan

2611 Status: Closed by vote on Jan 29, 2002. Target has been added.

2612 CLOSED ISSUE:[DS-14-13: StatusCodes]

2613 How should SAML Requests report errors? Many suggestions have been made, ranging from a  
2614 simple list of error codes to adopting SOAP error codes. Scott proposes:

2615 SAML needs an extensible, more flexible status code mechanism. This proposal is a hierarchical  
2616 Status structure to be placed inside Response as a required element. The Status element contains  
2617 a nested Code tree in which the top level Value attribute is from a small defined set that SAML  
2618 implementations must be able to create/interpret, while allowing arbitrary detail to be nested  
2619 inside, for applications prepared to interpret further.

2620 I mirrored some of SOAP's top level fault codes, while keeping SAML's Success code, which  
2621 doesn't exist in SOAP, since faults mean errors, not status. I also eliminated the Error vs Failure  
2622 distinction, which seems to be intended to "kind of" mean Receiver/Sender, which is better made  
2623 explicit. Unknown didn't make sense to me either. Please provide clarifications if these original  
2624 codes should be kept.

2625 The proposed schema is as follows, replacing the current string enumeration of StatusCodeType  
2626 with the new complex StatusType:

2627 <simpleType name="StatusCodeEnumType">

```

2628 <restriction base="QName">
2629   <enumeration value="samlp:Success"/>
2630   <enumeration value="samlp:VersionMismatch"/>
2631   <enumeration value="samlp:Receiver"/>
2632   <enumeration value="samlp:Sender"/>
2633 </restriction>
2634 </simpleType>
2635 <complexType name="StatusCodeType">
2636   <sequence>
2637     <element name="Value" type="samlp:StatusCodeEnumType"/>
2638     <element name="Code" type="samlp:SubStatusCodeType"
2639 minOccurs="0"/>
2640   </sequence>
2641 </complexType>
2642 <complexType name="SubStatusCodeType">
2643   <sequence>
2644     <element name="Value" type="QName"/>
2645     <element name="Code" type="samlp:SubStatusCodeType"
2646 minOccurs="0"/>
2647   </sequence>
2648 </complexType>
2649 <complexType name="StatusType">
2650   <sequence>
2651     <element name="Code" type="samlp:StatusCodeType"/>
2652     <element name="Message" type="string" minOccurs="0"
2653 maxOccurs="unbounded"/>
2654     <element name="Detail" type="anyType" minOccurs="0"/>
2655   </sequence>
2656 </complexType>
2657 In Response, delete the StatusCode attribute, and add:
2658 <element name="Status" type="samlp:StatusType"/>
2659
2660 Champion: Scott Cantor
2661
2662 Status: Closed by vote on Jan 29, 2002. Core specifies a Status element, which can contain
2663 codes, subcodes, messages and details. Four basic status codes are defined.

```

2662 DEFERRED ISSUE:[DS-14-14: ErrMsg in Multiple Languages]

2663 Should SAML allow status messages to be in multiple natural languages?

2664 In core-25, StatusMessage is defined (Section 3.4.3.3, lines 1183-1187) as being of type string.

2665 Its inclusion in the Status element (lines 1114-1115) allows multiple occurrences, that is, zero or

2666 more messages per status returned. In the call on Tuesday we discussed the potential need to  
2667 allow for multiple natural-language versions of status messages.

2668 If the StatusMessage element can't contain markup, then it makes it hard for someone to provide,  
2669 say, both English and Japanese versions of an error message. Here are two obvious different  
2670 ways to do this, both using the native xml:lang attribute to indicate the language in which the  
2671 message is written.

2672 (See also a possible SEPARATE issue at the bottom of this message.)

2673 =====

2674 Option 1: Multiple StatusMessage elements, each with language indicated

2675 Currently, multiple StatusMessages are already allowed, but we say nothing in the spec to  
2676 explain how they're supposed to be used or interpreted. The description just says (lines 1105-  
2677 1106):

2678 <StatusMessage> [Any Number]

2679 A message which MAY be returned to an operator.

2680 (Hmm, not sure what "operator" means here..) This option would place a specific interpretation  
2681 on the appearance of multiple StatusMessage elements related to language differentiation, and  
2682 would allow for an optional xml:lang attribute on the element:

2683 <StatusMessage> [Zero or more]

2684 A natural-language message explaining the status in a human-readable way. If more than  
2685 one <StatusMessage> element is provided, the messages are natural-language equivalents  
2686 of each other; in this case, the xml:lang attribute SHOULD be provided on each element.

```
2687 <element name="StatusMessage">  
2688   <complexType>  
2689     <simpleContent>  
2690       <extension base="string">  
2691         <attribute name="xml:lang" type="language"/>  
2692       </extension>  
2693     </simpleContent>  
2694   </complexType>  
2695 </element>
```

2696 I prefer this option because it has less markup overhead, as long as the multiple  
2697 <StatusMessage> elements already allowed in the schema weren't intended to have some other  
2698 meaning instead (in which case, that meaning needs to be documented). If they weren't, then if  
2699 this option \*isn't\* picked, I think we need to shut down multiple occurrences of  
2700 <StatusMessage>, changing it to minOccurs="0" and maxOccurs="1".

2701

2702 Option 2: One StatusMessage element, with partitioned content indicating language

2703 This option isn't all that different from option 1. It would invent a new subelement to go into the  
2704 content of <StatusMessage> like so:

2705 &lt;StatusMessage&gt;

2706 A natural-language message explaining the status in a human-readable way. It contains  
2707 one or more <MessageText> elements, each providing different natural-language  
2708 equivalents of the same message.

2709 &lt;element name="StatusMessage" type="StatusMessageType" /&gt;

2710 &lt;complexType name="StatusMessageType"&gt;

2711 &lt;sequence&gt;

2712 &lt;element ref="MessageText" maxOccurs="unbounded" /&gt;

2713 &lt;/sequence&gt;

2714 &lt;/complexType&gt;

2715 &lt;MessageText&gt;

2716 The text of the status message. If more than one <MessageText> element is provided, the  
2717 messages are natural-language equivalents of each other; in this case, the xml:lang  
2718 attribute SHOULD be provided on each element.

2719 &lt;element name="MessageText"&gt;

2720 &lt;complexType&gt;

2721 &lt;simpleContent&gt;

2722 &lt;extension base="string"&gt;

2723 &lt;attribute name="xml:lang" type="language"/&gt;

2724 &lt;/extension&gt;

2725 &lt;/simpleContent&gt;

2726 &lt;/complexType&gt;

2727 &lt;/element&gt;

2728 I think this option is necessary \*if\* multiple occurrences of <StatusMessage> were already  
2729 intended to have some other meaning. If they weren't, then I prefer option 1.

2730

2731 Digression on xml:lang

2732 You can read about this attribute here:

2733 Brief description of the xml: namespace:

2734 <http://www.w3.org/XML/1998/namespace.html>

2735 Section of the XML spec itself that defines xml:lang:

2736 <http://www.w3.org/TR/REC-xml#sec-lang-tag>

2737 There is also a non-normative but helpful schema module that defines the items in the xml:  
2738 namespace. You can find it here:

2739 <http://www.w3.org/XML/1998/namespace.xsd>

2740 This schema module can be useful if you want to slurp those definitions into the SAML schemas  
2741 to make sure that SAML instances can be fully validated. Alternatively, we can legally cook up  
2742 our own schema code for this as shown in the two options above, which would avoid importing  
2743 another schema module into both of ours, with attendant code and documentation. If we do that,  
2744 note that we'll still need to declare the xml: namespace at the tops of our schema modules.

2745 =====

2746 Final thoughts

2747 Even if the issue of multiple-language support is deferred until a future release, I believe that  
2748 <StatusMessage> and the fact that it's repeatable is underspecified at the moment. I would like  
2749 to see it restricted to an optional single occurrence, or alternatively, I would like to have its  
2750 semantics explained when multiple occurrences are used. This can be listed as a separate issue if  
2751 you like.

2752 <http://lists.oasis-open.org/archives/security-services/200201/msg00265.html>

2753 Champion: Eve Maler

2754 Status: Deferred by vote of the TC on April 9, 2002.

2755 DEFERRED ISSUE:[DS-14-15: Version Synchronization]

2756 What is the relationship between the version of the Assertions, Requests and Responses? Should  
2757 the values always be the same or can they change independently of each other?

2758 Potential Resolutions:

- 2759 1. Requests and Responses each have Major/Minor version info attributes, which implies that,  
2760 in theory, they could be upgraded independently (I didn't see where this is explicitly  
2761 prohibited). If so, Line 1228-1229 should be explicit: "This document defines SAML  
2762 Assertions 1.0, SAML Request Protocol 1.0, and SAML Response Protocol 1.0".
- 2763 2. If the intent is to keep the request and response protocols synchronized with a single SAML  
2764 protocol version (separate from the assertion version), then the RequestAbstractType type  
2765 (3.2.1) and the ResponseAbstractType type (3.4.1) should replace the MajorVersion and  
2766 MinorVersion attributes with a new <ProtocolVersionInfo> element defined something like:

```
2767 <element name="ProtocolVersionInfo" type="samlp:ProtocolVersionInfoType"/>
2768 <complexType name="ProtocolVersionInfoType">
2769   <attribute name="MajorVersion" type="integer" use="required"/>
2770   <attribute name="MinorVersion" type="integer" use="required"/>
2771 </complexType>
```

2772 3. If the intent is to keep the version info synchronized for assertions, request protocol, and  
2773 response protocol, then we could use the following in the <assertion> element (2.3.3) and the  
2774 request/response abstract types could include the <VersionInfo> element:

```
2775 <element name="VersionInfo" type="saml:VersionInfoType"/>
2776 <complexType name="VersionInfoType">
2777   <attribute name="MajorVersion" type="integer" use="required"/>
2778   <attribute name="MinorVersion" type="integer" use="required"/>
2779 </complexType>
```

2791 CLOSED ISSUE:[DS-14-17: Remove AssertionSpecifier]

2792 The <AssertionSpecifier> element appears in instances but we don't get anything good out of its  
2793 presence; it's a nonterminal masquerading as a terminal. This is ELM-2 in:

2794 <http://lists.oasis-open.org/archives/security-services/200203/msg00042.html>

2795 Champion: Eve Maler

2796 Status: Closed by vote of the TC on April 9, 2002. The proposed change has been made.

2797 CLOSED ISSUE:[DS-14-18: Change Evidence]

2798 The <Evidence> element is currently repeatable, and contains only a single assertion or assertion  
2799 ID reference. It would make more sense to allow a series of assertion information inside a single  
2800 <Evidence> element. This is ELM-3 in:

2801 <http://lists.oasis-open.org/archives/security-services/200203/msg00042.html>

2802 Champion: Eve Maler

2803 Status: Closed by vote of the TC on April 9, 2002. The proposed change has been made.

2804 CLOSED ISSUE:[DS-14-19: Remove Advice]

2805 We offer two ways to provide arbitrary advice: <AdviceElement> and the ##any wildcard. I'm  
2806 not sure why anyone would go to the bother of defining a custom type on top of  
2807 AdviceElementType when they can just use whatever elements they want. I think we should  
2808 remove <AdviceElement> and just stick with the wildcard.. This is ELM-4 in:

2809 <http://lists.oasis-open.org/archives/security-services/200203/msg00042.html>

2810 Champion: Eve Maler

2811 Status: Closed by vote of the TC on April 9, 2002. The proposed change has been made.

2812 CLOSED ISSUE:[DS-14-20: Reorder Conditions Contents]

2813 The content model for <Conditions> should be rationalized to put the SAML-native stuff first  
2814 and pick an order. This is ELM-5 in:

2815 <http://lists.oasis-open.org/archives/security-services/200203/msg00042.html>

2816 Champion: Eve Maler

2817 Status: Closed by vote of the TC on April 9, 2002. The proposed change has been made.

2818

2818 **Group 15:Elements Expressing Time Instants**

2819 CLOSED ISSUE:[DS-15-01: NotOnOrAfter]

2820 What should be the semantics of the specifier of the end of a time interval?

2821 Stephen Farrell commented:

2822 NotOnOrAfter. This is different from most end-date types specified elsewhere, in particular the  
2823 notAfter field in many ASN.1 structures. There is no justification given for this semantic change  
2824 which will cause new boundary conditions and hence new (probably broken) code. For example,  
2825 if an issuer has an X.509 certificate with a notAfter of 20021231235959Z then what is the latest  
2826 NotOnOrAfter value that should result in a valid assertion? What is the first NotOnOrAfter value  
2827 that should result in an assertion being invalidated for this reason? I don't know the answers.  
2828 Gratuitous changes are bad things. This is one such.

2829 RL "Bob" Morgan added:

2830 I agree that in this case consistency with X.509 Validity field:

```
2831 Validity ::= SEQUENCE {  
2832     notBefore    Time,  
2833     notAfter     Time }
```

2834 makes good sense, and support changing the NotOnOrAfter Condition attribute to "NotAfter". Is  
2835 there some good argument as to why it should be NotOnOrAfter?

2836 <http://lists.oasis-open.org/archives/security-services/200201/msg00192.html>

2837 Phill Hallam-Baker replied:

2838 The problem with the X.509 approach is that it leads to a complex ambiguity in interpretation.

2839 To put it another way, Steve has a problem because X.509 is confused and broken.

2840 The problem with the X.509 approach is that it requires a very peculiar interpretation of the  
2841 NotAfter time. Say we have 23:59:59, we have to consider the cert valid on 23:59:59.00 which is  
2842 expected but also 23:59:59.01 which is not.

2843 The mapping from X.509 to notOnOrAfter is actually straightforward, you just have to add on  
2844 the resolution of the time value which is almost always a second.

2845 The alternative is that every SAML implementation has to do the same thing every time a time is  
2846 measured.

2847 What is easier to code

2848 SAML

2849       if ( NotBefore <= time AND time < NotOnOrAfter)

2850 X.509

2851       if ( NotBefore <= time AND trunc (time, NotAfter.resolution) <NotAfter )

2852 Where NotAfter.resolution gives the resolution to which NotAfter is specified.

2853 The reason I want to make the change is that practically every X.509 implementation handles  
2854 time in a subtly different way. I believe that having a clearer set of semantics will make it easier  
2855 to get interoperability.

2856 <http://lists.oasis-open.org/archives/security-services/200201/msg00209.html>

2857 Champion: RL "Bob" Morgan

2858 Status: Closed by vote of the TC on March 12, 2002. NotOnOrAfter semantics is retained.

2859 **CLOSED ISSUE:[DS-15-02: Timezones]**

2860 Should SAML allow times to specify a timezone? Implicitly or explicitly? Daylight savings  
2861 time?

2862 Phill Hallam-Baker wrote:

2863 I have no problems with stating that all times must be in UTC. I am somewhat less sure as to the  
2864 best way to manage the timezone issue. One way is to state that all times MUST be expressed in  
2865 GMT, i.e. the timezone offset is zero. Another is to allow the use of local timezone offsets so that  
2866 the local and GMT time are both known.

2867 The concern is what to do if an application inserts a local timezone. Should it be permissively  
2868 accepted or definitively rejected. I think that we should either insist on GMT and require  
2869 processors to reject timezone offsets or allow explicit to allow numeric timezone offsets. Named  
2870 timezones are obviously right out.

2871 <http://lists.oasis-open.org/archives/security-services/200201/msg00258.html>

2872 Champion: Phill Hallam-Baker

2873 Status: Closed by vote of the TC on March 12, 2002. Core now specifies UTC must be used.

2874 **CLOSED ISSUE:[DS-15-03: Time Granularity]**

2875 Should SAML restrict time instants to a granularity of one second as X.509 does? Or permit  
2876 arbitrary fractions of a second to be specified or something else?

2877 Rich Salz commented:

2878 Subsecond resolution bothers me because XML Schema is silent on the matter of roundoff  
2879 errors, etc., between lexical form and native form, and back. See archives for discussion of  
2880 "round-tripping," e.g. If we need subsecond, then let's say msec and allow .000 only.

2881 <http://lists.oasis-open.org/archives/security-services/200201/msg00261.html>

2882 Phill Hallam-Baker responded:

2883 I don't believe that there is a requirement to support round tripping which is robust enough to  
2884 preserve a digital signature. And if there was I certainly don't think that it is likely to be meetable  
2885 in practice. I am not aware that the feature has been used to any advantage in X.509. The DER  
2886 encoding that it required was probbaly the single biggest impediment to getting interoperability  
2887 and deployment of X.509.

2888 If you want to regenerate the original document or node then store that instead of the signature.  
2889 Disks are cheap, even RAM is cheap.

2890 <http://lists.oasis-open.org/archives/security-services/200201/msg00278.html>

2891 Champion: Phill Hallam-Baker

2892 Status: Closed by vote of the TC on March 12, 2002. Core states that applications SHOULD  
2893 NOT rely on other applications supporting time resolution finer than milliseconds.

2894

2894 **Miscellaneous Issues**

2895 **Group 1: Terminology**

2896 **CLOSED ISSUE:[MS-1-01: MeaningofProfile]**

2897 The bindings group has selected the terminology:

- 2898 • SAML Protocol Binding, to describe the layering of SAML request-response messages  
2899 on "top" of a substrate protocol, Example: SAML HTTP Binding (SAML request-  
2900 response messages layered on HTTP).
- 2901 • a profile for SAML, to describe the attachment of SAML assertions to a packaging  
2902 framework or protocol, Example: SOAP profile for SAML, web browser profile for  
2903 SAML

2904 This terminology needs to be reflected in the requirements document, where the generic term  
2905 "bindings" is used. It needs also to be added to the glossary document.

2906 The conformance group has used the term Profile to define a set of SAML capabilities, with a  
2907 corresponding set of test cases, for which an implementation or application can declare  
2908 conformance. This use of profile is consistent with other conformance programs, as well as in  
2909 ISO/IEC 8632. In order to resolve this conflict, the conformance group has proposed, in sstc-  
2910 draft-conformance-spec-004, to substitute the word partition instead.

2911 Status: Closed by vote on Sept 4. The terminology of the bindings group, as specified in the  
2912 second bullet point above, has been accepted by the TC.

2913 **CLOSED ISSUE:[MS-1-02: URI References]**

2914 We keep talking about "URIs" in most places throughout, but we actually mean URI references  
2915 (with the option of putting # fragment identifiers on the end). We should say "URI reference"  
2916 throughout. This is ELM-6 in:

2917 <http://lists.oasis-open.org/archives/security-services/200203/msg00042.html>

2918 Champion: Eve Maler

2919 Status: Closed by vote of the TC on April 9, 2002. The proposed changes have been made.

2920 **CLOSED ISSUE:[MS-1-03: Domain Component Terms]**

2921 There are several terms bandied about in this spec that I'm concerned are underdefined or  
2922 inappropriately used: [SAML] application, [SAML] client, [SAML] service. And there are terms

2923 that I'm surprised are \*not\* used: authority, requester, responder. We should use "requester"  
2924 instead of "client", because a requester could be a service itself; and that we use "[SAML]  
2925 authority" instead of "[SAML] service" because we've carefully defined the former term. This is  
2926 ELM-6 in:

2927 <http://lists.oasis-open.org/archives/security-services/200203/msg00042.html>

2928 Champion: Eve Maler

2929 Status: Closed by vote of the TC on April 9, 2002. The proposed changes have been made.

2930

2930 **Group 2: Administrative**

2931 CLOSED ISSUE:[MS-2-01: RegistrationService]

2932 There is a need for a permanent registration service for publishing bindings and profiles. The  
2933 bindings group specification will provide guidelines for creating a protocol binding or profile,  
2934 but we also need to point to some form of registration service.

2935 DS-7-02: AuthN Method also implies a need to register AuthN methods.

2936 How can we take this forward? Is OASIS wiling to host a registry?

2937 Another possibility is IANA.

2938 Status: Closed by vote on Jan 29, 2002. The TC voted to host this at OASIS.

2939 CLOSED ISSUE:[MS-2-02: Acknowledgements]

2940 What is a consistent and fair way to list the editors and contributors to the specifications?

2941 Eve Maler made a proposal here:

2942 <http://lists.oasis-open.org/archives/security-services/200202/msg00090.html>

2943 Champion: Eve Maler

2944 Status: Closed by vote of the TC on April 9, 2002. A method of indicating TC members as well  
2945 as individuals who contributed specific text has been agreed on.

2946

2946 **Group 3: Conformance**

2947 CLOSED ISSUE:[MS-3-01: BindingConformance]

2948 Should protocol bindings be the subject of conformance? The bindings sub group is defining  
2949 both SAML Bindings and SAML Profiles. It has been proposed that both of these would be the  
2950 subject of independent conformance tests.

2951 The following definitions have been proposed:

2952 **SAML Binding:** SAML Request/Response Protocol messages are mapped onto underlying  
2953 communication protocols. (SOAP, BEEP)

2954 **SAML Profile:** formats for combining assertions with other data objects. These objects may be  
2955 communicated between various system entities. This might involve intermediate parties.

2956 This suggests that a Profile is a complete specification of the SAML aspects of some use case. It  
2957 provides all the elements needed to implement a real world scenario, including the semantics of  
2958 the various SAML Assertions, Requests and Responses.

2959 A Binding would simply specify how SAML Assertions, Requests and Responses would be  
2960 carried by some protocol. A Binding might be used as a building block in one or more Profiles,  
2961 or be used by itself to implement some use case not covered by SAML. In the later case, it would  
2962 be necessary for the parties involved to agree on all aspects of the use case not covered by the  
2963 Binding.

2964 Thus conformance testing of Bindings might be undesirable for two related reasons:

- 2965
- The number of independent test scenarios is already large. It seems undesirable to test something that does not solve a complete, real-world problem.
  - Parties would be able to claim “SAML Conformance” by conforming to a Binding, although they would not be able to actually interoperate with others in a practical situation, except by reference to a private agreement. This would likely draw a negative response from end users and other observers.
- 2966
- 2967
- 2968
- 2969
- 2970

2971 The advantages of testing the conformance of Bindings include:

- 2972
- Simplifying testing procedures when a Binding is used in several Profiles that a given party wishes to conform to.
  - Allow SAML to be used in scenarios not envisioned by the Profiles.
- 2973
- 2974

2975 This was identified as F2F#3-2.

2976 Possible Resolutions:

2977 1. Make Bindings the subject of conformance.

2978 2. Do not make Bindings the subject of conformance.

2979 Status: Closed by vote on Sept 4. The conformance group has made a proposal which has been  
2980 accepted by the TC.

2981 CLOSED ISSUE:[MS-3-02: Browser Partition]

2982 Should the Web Browser be a SAML Conformance Partition, different from the Authentication  
2983 Authority partition?

2984 This was identified as F2F#3-7.

2985 Status: Closed by vote on Sept 4. The Browser is not a partition.

2986 CLOSED ISSUE:[MS-3-03: Unbounded Elements]

2987 Should elements be defined with maxOccurs="unbounded"? If yes then should the number of  
2988 occurrences be limited in the conformance tests or elsewhere?

2989 Stephen Farrell wrote:

2990 Why allow "unbounded" anywhere? I see no reason why 10000000000 statements MUST be  
2991 supported, which is what seems to be implied. Suggest including a max value that  
2992 implementations MUST support, to be the same for all cases of "unbounded". Either incorporate  
2993 this into the schema (e.g. "maxOccurs=1000") or into text (considering how versioning is  
2994 currently done).

2995 RL "Bob" Morgan replied:

2996 I'm no schema expert, but it seems to me that putting something like "maxOccurs=1000" into the  
2997 schema isn't the right thing, since it makes sending 1001 of something invalid, where what we  
2998 want to say is just that it's not guaranteed to be interoperable.

2999 I agree with the sentiment, but the stating of "must handle at least N" seems to me to be much  
3000 more appropriate for the conformance document, though I have to say I can't quite see where it  
3001 would go in the current doc. But it would be necessary, I think, for conformance tests to include  
3002 handling multiple instances of all the possibly-multiple items up to the stated limits.

3003 <http://lists.oasis-open.org/archives/security-services/200201/msg00191.html>

3004 Champion: RL "Bob" Morgan

3005 Status: Closed by vote of the TC on March 12, 2002. This have been addressed in the  
3006 conformance specification.

3007

3007 **Group 4: XMLDSIG**

3008 CLOSED ISSUE:[MS-4-01: XMLDsigProfile]

3009 SAML should define an XMLDsig profile specifying which options may be used in SAML, in  
3010 order to achieve interoperability.

3011 One aspect of this is: which of the signature types: enveloped, enveloping and detached should  
3012 be supported? See also Issues UC-7-01 and UC-7-02.

3013 Status: Closed by vote on Jan 29, 2002. Core contains an XMLDsig profile.

3014 CLOSED ISSUE:[MS-4-02: SOAP Dsig]

3015 Exactly how should the use of digital signatures be specified in the SOAP profile?

3016 The SOAP profile in the bindings-06 draft specifies that all SOAP messages which include  
3017 SAML assertions must be signed. The current signature requirements are too restrictive; in  
3018 particular, they are not compatible with SOAP header elements that have "actor" attributes.

3019 I propose that we change lines 828-829 and 978-979 (.pdf version) to read:

3020 The <dsig:Signature> element MUST apply to all the SAML assertion elements in the SOAP  
3021 <Header>, and all the relevant portions of the SOAP <Body>, as required by the application.  
3022 Specific applications may require that the signature also apply to additional elements.

3023 (Do we need to say anything about whether the receiver should rely on unsigned portions of the  
3024 SOAP message? My first inclination is that it's up to the application, so we shouldn't say  
3025 anything. Perhaps we need something in security considerations?)

3026 Champion: Irving Reid

3027 Status: Closed by vote on Jan 29, 2002. The proposed changes have been made.

3028

3028 **Group 5: Bindings**

3029 CLOSED ISSUE:[MS-5-01: SSL Mandatory for Web]

3030 Should use of SSL be mandatory for the Web Browser Profile?

3031 The issue originates from the mandatory use of HTTP(S) in 4.1.4.1 (SAML Artifact) and 4.1.4.3  
3032 (Form POST) between the browser equipped user and source and destination sites respectively.  
3033 The essential issue therein is confidentiality of the SAML artifact (4.1.4.1) or SAML assertions  
3034 (4.1.4.3). If we do not use HTTPS, the HTTP traffic between the user and source or destination  
3035 can be copied and used for impersonation.

3036 There was concern at this requirement at the F2F#4 and as Gil is away the action item has fallen  
3037 to me. But I am genuinely puzzled as to how we can move away from this requirement.

3038 (1) Should the text merely state that confidentiality is a requirement (MUST) (could be met in  
3039 some unspecified way?) and that HTTPS MAY be used? I am opposed to this formulation as it is  
3040 not specific enough to support inter-operability. How can a pair of sites collaborate to support the  
3041 web browser profile if each uses some arbitrary method for confidentiality?

3042 (2) Another approach would be to require confidentiality (MUST) and specify HTTPS as a  
3043 mandatory-to-implement feature. Those sites that prefer to use some other method for  
3044 confidentiality can do so, but all sites must also support HTTPS. This ensures inter-operability as  
3045 we can always fall back on HTTPS.

3046 Champion: Prateek Mishra

3047 Status: Closed by vote on Jan 29, 2002. The Profiles in question state that confidentiality and  
3048 integrity MUST be maintained, but that use of SSL/TLS is only RECOMMENDED

3049 CLOSED ISSUE:[MS-5-02: MultipleAssns per Artifact]

3050 In the browser artifact profile as described in the bindings-06 document, section 4.1.5, lines 565-  
3051 567 imply that more than one authentication assertion could be transferred. This raises all sorts  
3052 of questions about how the receiver should behave, particularly if the authn assertions refer to  
3053 different subjects.

3054 Do we want to say anything more about this? Alternatives include:

3055 (a) Make no changes to the spec. Implementers are free to choose whatever behavior they think  
3056 is appropriate for their solution.

3057 (b) Specify that all authn assertions must contain the same Subject (or at least, the same  
3058 NameIdentifier within the Subject)

3059 (c) Specify exactly how the receiver should behave. Two possibilities are to say that access  
3060 should be allowed if any one of the Subjects would be allowed, or that access should only be  
3061 allowed if all of the Subjects are allowed.

3062 My life would be easiest if we choose (b), though I could see how it might be too severe a  
3063 constraint on some applications.

3064 Champion: Irving Reid

3065 Status: Closed by vote on Jan 29, 2002. Browser Artifact Profile specifies the use of multiple  
3066 Artifacts, each one corresponding to one assertion

3067 CLOSED ISSUE:[MS-5-03: Multiple PartnerIDs]

3068 Can a single URL contain handles to more than one PartnerID?

3069 In Prateek's bindings-06 document on lines 518-519, when a user is transferred, more than one  
3070 SAML Artifact could be passed on the URL.

3071 The first question this raises is: can the artifacts contain more than one PartnerID? In the  
3072 paragraph at lines 536-541, the description implies that all the assertions are pulled at once. This  
3073 won't work if the artifacts have different PartnerIDs, and the partners have different access  
3074 URLs.

3075 I'd like to propose an addition to the paragraph at 518-519, adding the sentence:

3076 When more than one artifact is carried on the URL query string, all the artifacts MUST have the  
3077 same PartnerID.

3078 Champion: Irving Reid

3079 Status: Closed by vote on Jan 29, 2002. PartnerID is now called SourceID. The Profile states that  
3080 all the SourceIDs must be the same.

3081 CLOSED ISSUE:[MS-5-04: Use Response in POST]

3082 Should the Web Browser POST Profile return an Assertion or a Response containing an  
3083 Assertion in the hidden field of the form?

3084 RL "Bob" Morgan wrote:

3085 As we were developing the POST profile there was discussion about whether features in the  
3086 SAML assertion are sufficient to provide countermeasures for the various threats that we  
3087 recognize, or whether additional "packaging" (to use Marlina's term) is needed. There were  
3088 good reasons why "packaging" would be useful but I think there was resistance to developing  
3089 some new structure just for this purpose. Hence we decided to add the TargetRestriction

3090 condition to the Assertion, and to use a short validity period in the Assertion, as major  
3091 mechanisms to deal with threats.

3092 This had been simmering with me before, but Stephen Farrell's comment:

3093       Inclusion of both Audience and Target conditions is pointless and broken. Delete one, or  
3094       show they're different.

3095 pushed me over the edge; also recent changes to the Response object. In this note I propose that  
3096 we change the POST profile so that a SAML Response object is sent rather than just an  
3097 Assertion. This is in the spirit of the former "packaging" idea but uses a standard already-  
3098 defined object (with one proposed change). I think those of us who care about the POST profile  
3099 would like to see this change be made.

3100 The details of the proposal are that (sorry no actual text yet):

3101 (a) the POST profile be modified so that the object sent in the POST is a SAML Response  
3102 (b) that this Response always be XML-DSIG-signed, and the contained Assertion(s) need not be  
3103 signed (but could be);

3104 (c) the TargetRestrictionCondition be removed from the Conditions element in the Assertion and  
3105 instead be made an optional element of the Response object;

3106 (d) the new IssueInstant element of the Response be checked by the POST receiver to ensure that  
3107 the Response is recently-generated;

3108 (e) the InResponseTo attribute of the Response object be set to some distinguished value  
3109 indicating "not in response to a request", eg the empty string.

3110 This would have the benefits of (at least):

3111 (1) This clarifies the distinction between Target and Audience, since they're now attached to  
3112 different objects. IMHO Target is more appropriately applied to a Response object rather than  
3113 the Assertion anyway, since it's really a restriction on how-the-thing-was-sent rather than the  
3114 thing itself.

3115 (2) For both target-checking and timestamp-checking, having values in a well-known single  
3116 place in the single Response object is much more clear than having to rely on Target/Validity  
3117 values in the potentially many Assertions that might be sent, which might have ambiguous  
3118 values.

3119 (3) The validity period in a POSTed Assertion (or set of Assertions) can be (somewhat) longer,  
3120 hence it could be pre-generated; though we may still want to suggest some short limit for the end  
3121 of the Assertion validity period.

3122 (4) A Response can be generated by the inter-site transfer site even when an Assertion can not be

3123 (eg "user cancelled login operation") and can communicate error conditions via Status, which  
3124 otherwise can't be done.

3125 (5) POST and Artifact will both result in Responses being received by the target, which permits  
3126 much more consistency in their handling, greatly easing implementations that want to support  
3127 both.

3128 Possible objections (and responses to them) might be:

3129 (i) The proposed Response is not issued in response to a Request. This doesn't seem like much  
3130 of an argument to me. If the structure is useful, let's use it; I think there are lots of existing  
3131 protocols where "unsolicited responses" exist for this same sort of reason.

3132 (ii) The IssueInstant which is to be added to the Response schema only specifies what could be  
3133 thought of as a start time for a validity period for the Response, rather than both start and end as  
3134 Assertion Validity does. I do not think that this is a concern, because ultimately the decision on  
3135 length of time that the receiver is prepared to accept this Response is up to the receiver; that is, if  
3136 (under the current format) an asserter puts in a Validity of, say, a 24-hour duration, a reasonable  
3137 receiver will still reject this after just a few minutes. So having only an IssueInstant and letting  
3138 the receiver base its decision on this seems fine to me. Alternatively, if folks felt strongly,  
3139 another value could be added to the schema to express the end-of-validity time (but I think this is  
3140 unnecessary).

3141 <http://lists.oasis-open.org/archives/security-services/200201/msg00238.html>

3142 Champion: RL "Bob" Morgan

3143 Status: Closed by vote of the TC on April 9, 2002. The proposed change has been made.

3144 CLOSED ISSUE:[MS-5-05: Artifact Request Errors]

3145 When relying party gets multiple artifacts, it needs to get the corresponding assertions. It sends a  
3146 single SAML request with all the artifacts, lets say there are errors in some assertions retrieval  
3147 and some are retrieved correctly at source site. What kind of response is returned by source site?

3148 This was posed by SAP as item #13 in:

3149 <http://lists.oasis-open.org/archives/security-services-comment/200202/msg00008.html>

3150 Champion: Prateek Mishra

3151 Status: Closed. Deemed to have been satisfied by the changes proposed in:

3152 <http://lists.oasis-open.org/archives/security-services/200203/msg00044.html>

3153 CLOSED ISSUE:[MS-5-06: Artifact Test Case]

3154 According to Test Case 1-2, 1-3, 1-6, 1-10 in the conformance spec 11, a SAML Request is sent  
3155 over SOAP protocol binding to a responder. The responder should be able to return an assertion  
3156 artifact in the Response. The requester then request the assertion using the artifact.

3157 The key here is an artifact is requested for ANY type of assertion AND over SOAP protocol  
3158 binding. I don't see these requirement anywhere else, not even in Table 1: Protocol Bindings and  
3159 Profiles for SAML Assertions. Are they intended or should be removed?

3160 <http://lists.oasis-open.org/archives/security-services/200202/msg00182.html>

3161 Champion: Eve Maler

3162 Status: Closed by vote of the TC on April 9, 2002. These requirements were removed.

3163 CLOSED ISSUE:[MS-5-07: SSO Confirmation]

3164 Should the SSO Assertion's ConfirmationMethod be set to SAMLArtifact?

3165 <http://lists.oasis-open.org/archives/security-services/200203/msg00007.html>

3166 Champion: Jeff Hodges

3167 Status: Closed by vote of the TC on April 9, 2002. The method is artifact, but the artifact value is  
3168 not provided.

3169 DEFERRD ISSUE:[MS-5-08: Publish WSDL]

3170 Publish Irving's WSDL for SAML 1.0, even if it is non-normative. Where? Perhaps in Bindings  
3171 doc? This is ELM-8 in:

3172 <http://lists.oasis-open.org/archives/security-services/200203/msg00042.html>

3173 Champion: Eve Maler

3174 Status: Deferred by vote of the TC on March 19, 2002. Needs more review and a decision where  
3175 to publish it.

3176

## 3176 Document History

- 3177
  - 5 Feb 2001 First version for Strawman 2.
- 3178
  - 26 Feb 2001 Made the following changes:
    - 3179
      - Changed references to [SAML] to SAML.
    - 3180
      - Added rewrites of Group 1 per Darren Platt.
    - 3181
      - Added rewrites of Group 3 per David Orchard.
    - 3182
      - Added rewrites of Group 5 per Prateek Mishra.
    - 3183
      - Added rewrites of Group 11 per Irving Reid.
    - 3184
      - Converted the abbreviation "AuthC" (for "authentication") to "AuthN."
    - 3185
      - Added Group 13.
    - 3186
      - Added UC-1-12:SignOnService.
    - 3187
      - Converted candidate requirement naming scheme from [R-Name] (as used in the
    - 3188
      - main document) to [CR-issuenum-Name], per David Orchard.
    - 3189
      - Added UC-0-02:Terminology.
    - 3190
      - Added UC-0-03:Arrows.
    - 3191
      - Updated UC-9-02:PrivacyStatement with suggested requirements from Bob
    - 3192
      - Morgan and Bob Blakley.
    - 3193
      - Added UC-1-13:ProxyModel per Irving Reid.
    - 3194
      - Added status indications for each issue.
    - 3195
      - Recorded votes and conclusions for issue groups 1, 3, and 5.
    - 3196
      - Added Zahid Ahmed's use cases for B2B transactions.
    - 3197
      - Added Maryann Hondo's use case scenario for ebXML.
    - 3198
      - Added comments to votes by Jeff Hodges, Bob Blakley.
- 3199
  - 10 Apr 2001 Made the following changes:

draft-sstc-saml-issues-12.doc

- 3200 • Added re-written versions of issue group 2, 3, 6, 7, 8, 9, 10, and 13 by Darren  
3201 Platt and Evan Prodromou.
- 3202 • Added re-written versions of issue groups 11 and 12 by Irving Reid.
- 3203 • Added re-written version of issue group 4 by Prateek Mishra.
- 3204 • Added voting results for groups 2, 3, 4, 6, 7, 8, 9, 10, 11, 12, and 13.
- 3205 • 22 May 2001 Made the following changes:
  - 3206 • Changed introduction to reflect conversion to general issues list
  - 3207 • Added color scheme
