

## OASIS Web Services and SOA Committees

OASIS is a not-for-profit, international consortium that drives the development, convergence, and adoption of e-business standards. OASIS produces widely adopted, open standards for Web services and Service Oriented Architectures (SOA), allowing applications to communicate across platforms and programming languages.

### **Asynchronous Service Access Protocol (ASAP)**

Enabling the control of asynchronous or long-running Web services

### **e-Business Service Oriented Architecture (ebSOA)**

Advancing architectural patterns for using Service Oriented Architecture in electronic business

### **ebXML Business Process**

Providing a standards-based business process foundation that promotes the automation and predictable exchange of business collaboration definitions using XML

### **ebXML Collaboration Protocol Profile Agreement (CPPA)**

Describing how trading partners engage in e-business collaborations through the exchange of electronic messages

### **ebXML Implementation, Interoperability, Conformance (IIC)**

Enabling software providers to create infrastructure and applications which adhere to ebXML OASIS Standards

### **ebXML Messaging Services**

Defining the transport, routing and packaging of e-business transactions

### **ebXML Registry**

Defining and managing interoperable registries and repositories

### **Framework for Web Services Implementation (FWSI)**

Defining methods and functional components for multi-platform, cross-industry implementation of Web services

### **Open Building Information Exchange (oBIX)**

Enabling mechanical and electrical control systems in buildings to communicate with enterprise applications

### **SOA Adoption Blueprints**

Developing archetypal sets of requirements to serve as generic, vendor-neutral instances of service-oriented solutions

### **SOA Reference Model (SOA-RM)**

Developing a core reference model to guide and foster the creation of specific, service-oriented architectures

### **Translation Web Services**

Automating the translation and localization process as a Web service

### **UDDI Specification**

Defining a standard method for enterprises to dynamically discover and invoke Web services

### **Web Services Business Process Execution Language (WSBPEL)**

Enabling users to describe business process activities as Web services and define how they can be connected to accomplish specific tasks

### **Web Services Composite Application Framework (WS-CAF)**

Defining an open framework for supporting coordinated and transactional compositions of multiple Web services applications

### **Web Services Distributed Management (WSDM)**

Defining a Web services architecture to manage distributed resources

### **Web Services for Remote Portlets (WSRP)**

Standardizing presentation-oriented Web services for use by aggregating intermediaries, such as portals

### **Web Services Notification (WSN)**

Advancing a pattern-based approach to allow Web services to disseminate information to one another

### **Web Services Quality Model**

Defining common criteria to evaluate quality levels for interoperability, security, and manageability of services

### **Web Services Reliable Exchange (WS-RX)**

Advancing a protocol for reliable message exchange using Web services

### **Web Services Reliable Messaging (WSRM)**

Establishing a standard, interoperable way to guarantee message delivery to applications or Web services

### **Web Services Resource Framework (WSRF)**

Defining an open framework for modeling and accessing stateful resources using Web services

### **Web Services Secure Exchange (WS-SX)**

Defining WS-Security extensions and policies to enable the trusted exchange of multiple SOAP messages

### **Web Services Security (WSS)**

Delivering the WS-Security foundation for functions such as integrity and confidentiality in messages implementing higher-level Web services applications

### **Web Services Transaction (WS-TX)**

Defining protocols for coordinating the outcome of distributed application actions

# OASIS Membership

## One Organization, Many Opportunities

As a member of OASIS, you gain the power to influence the standards that shape our industry, whether you represent a:

- user** seeking to ensure your business requirements are met;
- government agency** wanting to minimize overlap of standards and reduce the risk in recommending new technology;
- software provider** driving industry cooperation through standards; or
- industry group** coordinating domain efforts with foundational work.

Benefits of membership:

- Participate in as many OASIS Committees as you choose
- Initiate new Committees to address identified market needs
- Influence the direction of existing Committees by contributing technical work and articulating preferences
- Gain access to early drafts of new specifications
- Identify partners and develop joint solutions
- Unify fragmented efforts to speed implementation
- Liaise with related efforts at OASIS to address convergence and interoperability issues at the development stage
- Protect development efforts from single-vendor bias
- Expand visibility through participation in interoperability events
- Work alongside the industry's most influential experts
- Learn and adopt best practices
- Foster a greater variety of competitive solutions
- Lower the cost of implementation
- Contribute to work respected as the product of the OASIS open process

### Where Members Drive the Agenda

OASIS believes widespread adoption is best achieved when all those affected by a standard participate in its development and implementation. We offer a range of dues to support an inclusive, balanced member base, where users and vendors, governments and universities all have a seat at the table.

<i>Level</i>	<i>Annual Dues (USD)</i>
Foundational Sponsor .....	45,000
Sponsor .....	13,500
Contributor	
10 or more employees .....	5,750
Less than 10 employees .....	2,750
Non-profit .....	1,000
Individual .....	250

OASIS is a not-for-profit, international consortium dedicated to the development, convergence, and adoption of e-business standards. OASIS Standards are developed through an open process, one that provides for fairness, transparency and full participation from the entire community.
