The XML standards landscape is constantly shifting, and this makes it difficult to accurately represent the standards in existence. It's hard to figure out what they all do and on which to focus. In this poster, ZapThink identifies some of the key XML standards that are in existence, and how they relate to each other.

With over 450 XML standards currently in existence, it's hard to figure out what they all do and on which to focus. In this poster, ZapThink identifies some of the key XML standards that are in existence, and how they relate to each other.

The standards landscape is constantly shifting, and this makes it difficult to accurately represent the standards in existence. It's hard to figure out what they all do and on which to focus. In this poster, ZapThink identifies some of the key XML standards that are in existence, and how they relate to each other.

In this poster, ZapThink has represented over 135 of the key specifications influencing the standards landscape. We have done our best to accurately represent the standards in the poster, but with the landscape changing frequently, the representation is a snapshot in the timeline of XML.
