Deferred Issues for SAML V2.0

Working Draft 01, 9 May 2006

Document identifier:
ssct-saml-2.0-deferred-issues

Location:

Editors:
Eve Maler (eve.maler@sun.com), Sun Microsystems

Abstract:
This document records issues that the Security Services Technical Committee (SSTC) has decided to defer. (More typically, new requests for enhancement on the SAML V2.0 specifications are dealt with as errata or are proposed as a new profile or extension.)

Status:
This is a working draft that will be a work-in-progress until such time as a revision of SAML V2.0 as a whole is undertaken.
Table of Contents

1 Deferred Issues for SAML V2.0

1.1 Outstanding assertions and NameID changes

1 Deferred Issues for SAML V2.0

1.1 Outstanding assertions and NameID changes

Reported by Conor Cahill on 21 April 2006:

When a SP changes a SPProvidedNameID with the IdP, an interesting piece of information that could be quite useful for the IdP to return to the SP would be an indication of the whether or not there are any outstanding assertions and if so, what the anticipated expiration time of the longest lasting assertion. ....
