Sun Microsystems

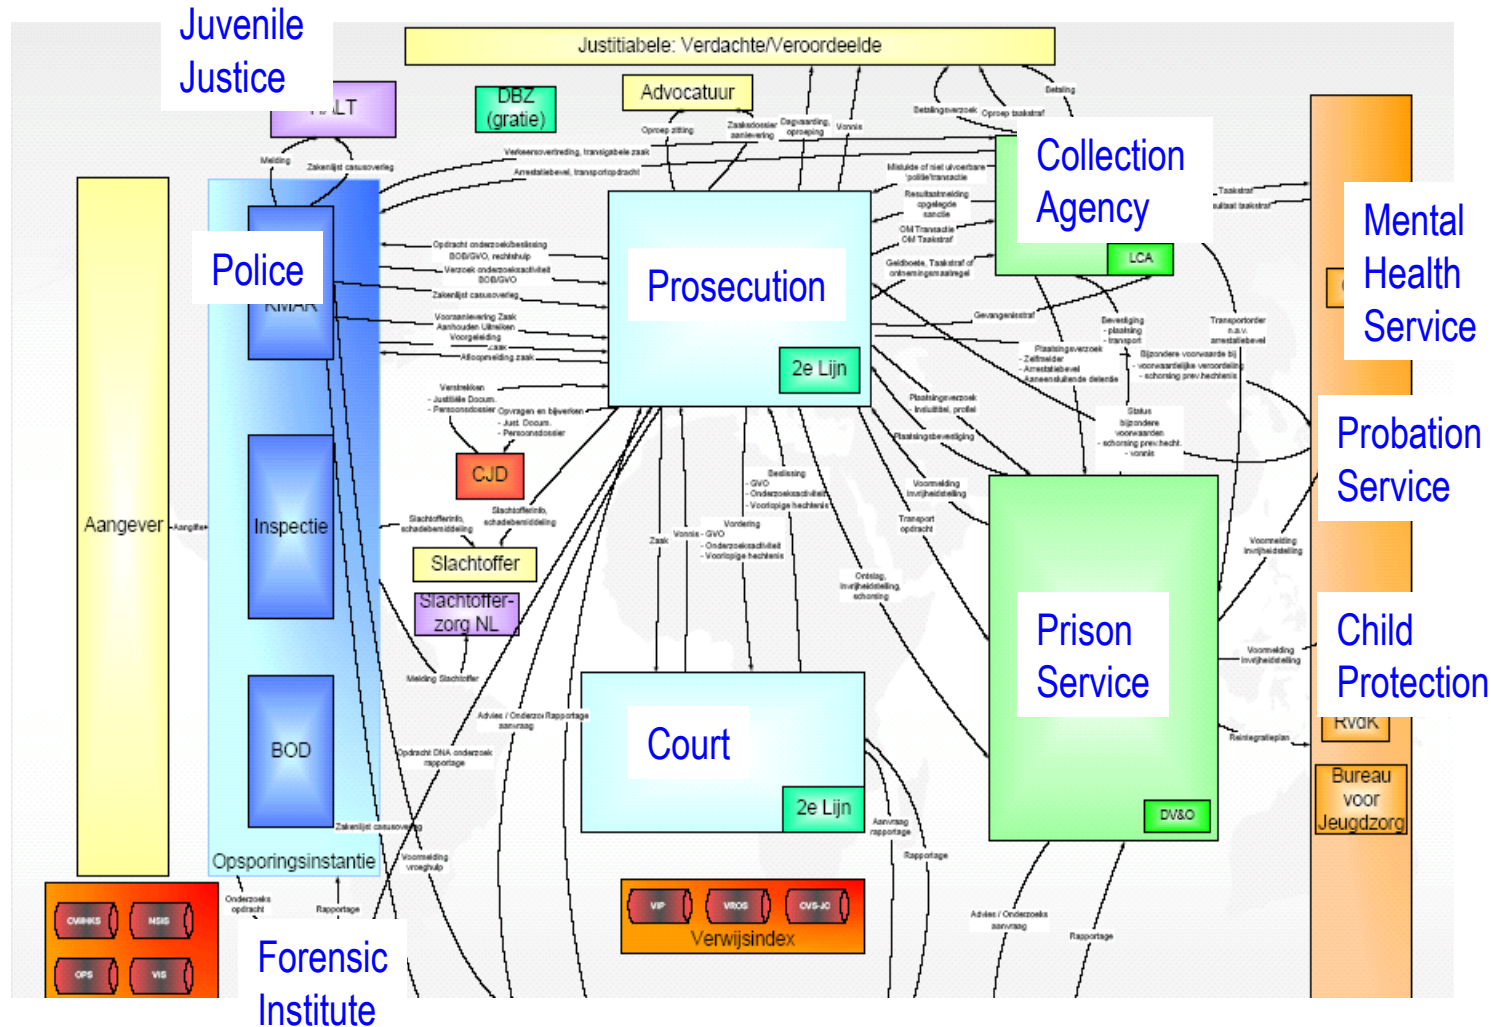

ebBP and eBusiness Interoperability

- The eBusiness Domain: Business collaboration
 - > Business and technical expectations
- ebBP and eBusiness Interoperability
- Exemplary Use Case
- Current State and Future
- Summary/Questions

The eBusiness Domain

- Technical perspective
 - > Peer-to-peer heterogeneous environments
 - > Guided by partner expectations
 - > Differing complexity of business processes
- Business perspective
 - > Pressure to:
 - > Save cost yet add business value
 - > Increase business visibility
 - > Focus on monitoring for business users
 - > Interest in emerging technology innovation but tied to business return

Collaboration Gets Complex Quickly

The key is to create a conduit to your operational systems

Collaboration Gets Complex Quickly (2)

The screenshot shows a desktop environment with two main windows. On the left is 'Untitled1 - StarOffice Writer'. On the right is 'Workspace Window - ArkadinDataNow - 106175945 - Microsoft Internet Explorer'. The IE window contains a complex collaboration diagram with nodes and connections. A sidebar on the right lists various collaboration activities and roles. Below the diagram is a 'Business Transaction Classification' tree with various file paths.

Support Business Collaborations for user communities and experts

Basic eBusiness Terminology

- Business Transaction:
 - > Unit of work in trading relationship
 - > Based on standard or extensible patterns
- Business Collaboration: Peer-to-peer partner activities
 - > Exchange business messages and signals
 - > Nests business transactions or collaborations
- Business Signal: State alignment vehicle
- Business Service Interface: Manages eBusiness assets
- Choreography: Ordering and transitions of Business Transactions

Business Collaboration

With ebBP (ebXML Business Process Specification Schema)

- Two+ business partners or collaborating parties
 - > Roles typically change and are bound from design to process execution
- Simple modular to complex nested business activities
 - > Business transactions, choreography, and business collaboration
- Simple to complex assemblies of business documents
 - > Often, involve semantic details important to business process and processing

Business Collaboration using ebBP

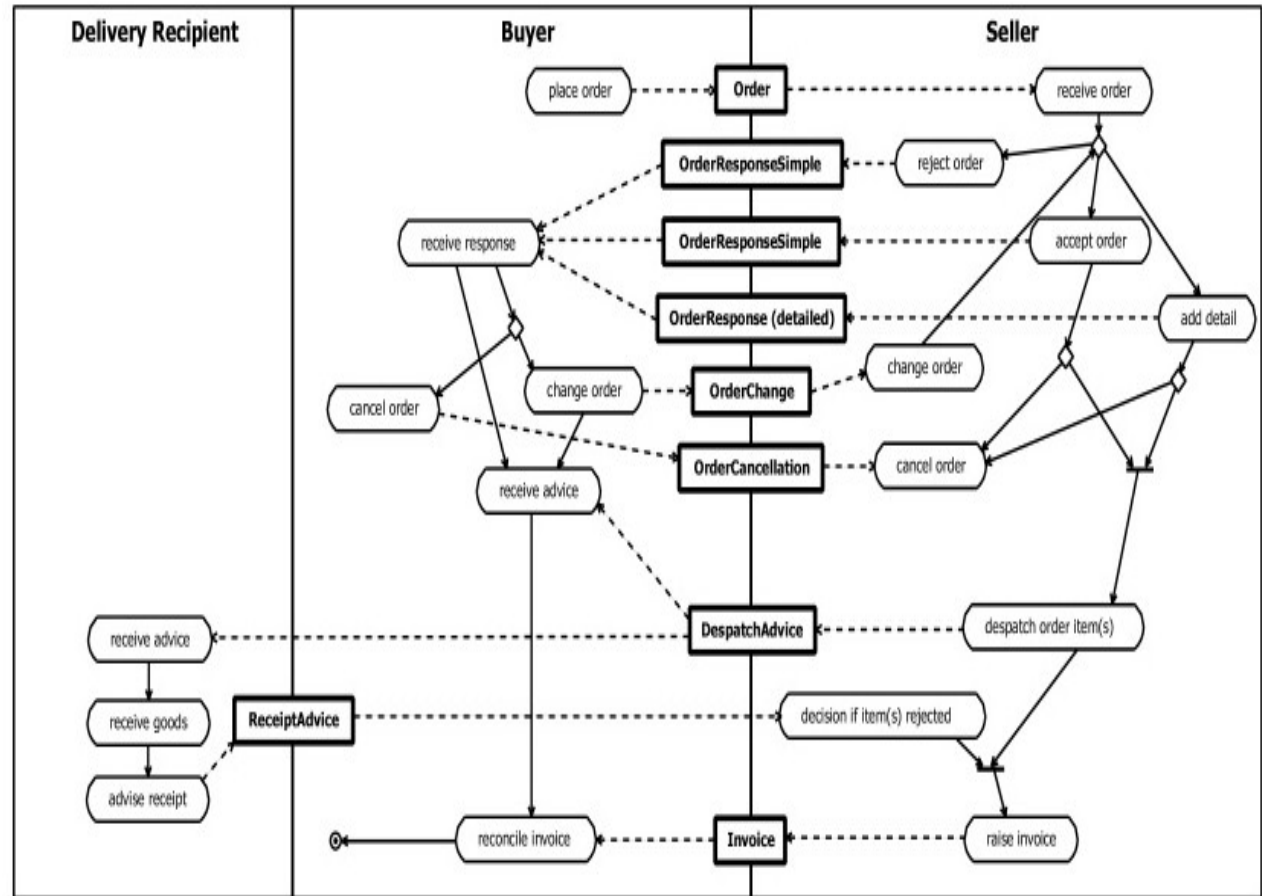

Guide for Technical Configuration and Messaging Services

- Uses standard or extensible business transaction patterns that provide core operational semantics
 - > Maps WSDL MEP to business transaction patterns.
Leverages Collaboration Protocol Agreement (CPA)
- Specifies quality, document security and other business Quality of Service expectations
- Uses semantic variables and external references
 - > Guides business document and activity use
- Provides status visibility for complex business transaction activities
- Provides business basis for technical configuration

ebBP Focus: Community Use Cases

Focus on Domain and Partner Usability

- Business requirements
- Use cases; domain limits
- Encourage interoperability
- Progressive changes for:
 - > Reusability
 - > Compose where needed

Example

Universal Business Language v1.0: Order to Invoice

ebBP: Modular Process Definition

```

<?xml version="1.0" encoding="UTF-8"?>
<ProcessSpecification xmlns="http://docs.oasis-open.org/ebxmlbp/ebbp-2.0" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" name="UBL 1.0 Small Business Subset Invoice Notification" nameID="UBL1SBSInvoiceNotification_PS"
specificationVersion="2" instanceVersion="1.0.2" xsi:schemaLocation="http://docs.oasis-open.org/ebxmlbp/ebbp-2.0 ebbp-2.0.2.xsd" uuid="bpid:urn:oasis:names:tc:bpss:ubl-1-sbs-invoice-notification">
  <Documentation/>
  <!--Business signal definitions-->
  <BusinessDocument name="UBL 1.0 SBS Invoice" nameID="Invoice_UBL1SBSInvoiceNotification_BD">
    <!--Specification of UBL SBS Invoice-->
    <!--Specification externalDocumentDefRef-->
  </BusinessDocument>
  <Package name="UBL1SBSInvoiceNotification" nameID="UBL1SBSInvoiceNotification">
    <Documentation/>
    <!--Notification Business Transaction-->
    <!--RequestingRole and RespondingRole-->
    <!--Receipt Acknowledgements and AcceptanceAcknowledgements / Business signals-->
    <!--RequestingBusinessActivity-->
    <!--RespondingBusinessActivity-->
  </Notification>
  <!--BusinessCollaboration-->
  <!--Role name and nameID--><TimeToPerform/>
  <!--Start-->
  <!--BusinessTransactionActivity-->
  <TimeToPerform/>
  <!--Performs for roles assumed by business partner in this BTA: currentRoleRef and performsRoleRef-->
  </BusinessTransactionActivity>
  <!--Success conditions-->
  <!--Failure conditions-->
  </BusinessCollaboration>
</Package>
</ProcessSpecification>

```

ebBP: Composed Collaboration

```

...<!-- remember to add XInclude namespace if XInclude is to be used -->
<ProcessSpecification name="Custom Process UBL 1.0 Small Business Subset ReceiptAdvice Invoice" nameID="CustomProcessUBL1SBSReceiptAdviceInvoice_PS" specificationVersion="2"

        </FromLink>
      </Failure>
    </BusinessCollaboration>
  </Package>
</ProcessSpecification>

```

Solutions for Real-World Use Cases

- Maximize capabilities to enable simple=>complex activities and processes
 - > Conditions, choreography and patterns
- Concentrate on logical Business Document for optimal compositional capabilities
 - > Support tailoring (such as context) to Business Documents, processing or the ebBP process definition
- Allow for modular to complex, nested activities and Business Collaborations
 - > Broad swath of composition desired and technology used
 - > Technical state alignment using Business Signals
 - > Visibility to other definitions and status

ebBP and eBusiness Interoperability

The ebBP Basic Tenets

- The eBusiness Domain: Heterogeneous and focused on partner expectations
- The Community: Global + domain perspectives
- Solutions: Turn domain capabilities into assets
 - > Build from modular process definitions
 - > Compose into complex Business Collaborations
 - > Leverage emerging technologies
- The Future: Adoption and deployment
 - > Move OASIS Standard to ISO 15000
 - > Possible futures - more visibility, multi-party, late binding
