Declared XML Namespaces:
http://docs.oasis-open.org/ws-rx/wsrmp/200702

Abstract:
This specification describes a domain-specific policy assertion for WS-ReliableMessaging [WS-RM] that can be specified within a policy alternative as defined in WS-Policy Framework [WS-Policy].

By using the XML [XML], SOAP [SOAP 1.1], [SOAP 1.2] and WSDL [WSDL 1.1] extensibility models, the WS* specifications are designed to be composed with each other to provide a rich Web services environment. This by itself does not provide a negotiation solution for Web
services. This is a building block that is used in conjunction with other Web service and application-specific protocols to accommodate a wide variety of policy exchange models.

**Status:**

This document was last revised or approved by the WS-RX Technical Committee on the above date. The level of approval is also listed above. Check the "Latest Version" or "Latest Approved Version" location noted above for possible later revisions of this document.

Technical Committee members should send comments on this specification to the Technical Committee's email list. Others should send comments to the Technical Committee by using the "Send A Comment" button on the Technical Committee's web page at [http://www.oasis-open.org/committees/ws-rx/](http://www.oasis-open.org/committees/ws-rx/).

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Technical Committee web page ([http://www.oasis-open.org/committees/ws-rx/ipr.php](http://www.oasis-open.org/committees/ws-rx/ipr.php)).

The non-normative errata page for this specification is located at [http://www.oasis-open.org/committees/ws-rx/](http://www.oasis-open.org/committees/ws-rx/).

1 Introduction

This specification defines a domain-specific policy assertion for reliable messaging for use with WS-Policy and WS-ReliableMessaging.

1.1 Terminology

The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in RFC 2119 [KEYWORDS].

This specification uses the following syntax to define normative outlines for messages:

- The syntax appears as an XML instance, but values in italics indicate data types instead of values.
- Characters are appended to elements and attributes to indicate cardinality:
  - "?" (0 or 1)
  - "***" (0 or more)
  - "+" (1 or more)
- The character "|" is used to indicate a choice between alternatives.
- The characters "[" and "]" are used to indicate that contained items are to be treated as a group with respect to cardinality or choice.
- An ellipsis (i.e. "...") indicates a point of extensibility that allows other child, or attribute, content. Additional children and/or attributes MAY be added at the indicated extension points but MUST NOT contradict the semantics of the parent and/or owner, respectively. If an extension is not recognized it SHOULD be ignored.
- XML namespace prefixes (see section 1.4) are used to indicate the namespace of the element being defined.

Elements and Attributes defined by this specification are referred to in the text of this document using XPath 1.0 [XPATH 1.0] expressions. Extensibility points are referred to using an extended version of this syntax:

- An element extensibility point is referred to using {any} in place of the element name. This indicates that any element name can be used, from any namespace other than the wsrn: namespace.
- An attribute extensibility point is referred to using @{any} in place of the attribute name. This indicates that any attribute name can be used, from any namespace other than the wsrn: namespace.

1.4 Namespace

The XML namespace [XML-ns] URI that MUST be used by implementations of this specification is:

http://docs.oasis-open.org/ws-rx/wsrmp/200702

Dereferencing the above URI will produce the Resource Directory Description Language [RDDL 2.0] document that describes this namespace.

Table 1 lists the XML namespaces that are used in this specification. The choice of any namespace prefix is arbitrary and not semantically significant. The assertions defined within this specification have been designed to work independently of a specific version of WS-Policy. At the time of the publication of this specification the versions of WS-Policy known to correctly compose with this specification are WS-Policy 1.2 and 1.5. Within this specification the use of the namespace prefix wsp refers generically to the WS-Policy namespace, not a specific version.

Table 1

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Namespace</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>wsd1</td>
<td><a href="http://schemas.xmlsoap.org/wsd1/">http://schemas.xmlsoap.org/wsd1/</a></td>
<td>[WSDL 1.1]</td>
</tr>
<tr>
<td>wsrmp</td>
<td><a href="http://docs.oasis-open.org/ws-rx/wsrmp/200702">http://docs.oasis-open.org/ws-rx/wsrmp/200702</a></td>
<td>This specification.</td>
</tr>
</tbody>
</table>

The normative schema for WS-ReliableMessaging can be found linked from the namespace document that is located at the namespace URI specified above.

All sections explicitly noted as examples are informational and are not to be considered normative.

1.5 Conformance

An implementation is not compliant with this specification if it fails to satisfy one or more of the MUST or REQUIRED level requirements defined herein. A SOAP Node MUST NOT use the XML namespace identifier for this specification (listed in section 1.4) within SOAP Envelopes unless it is compliant with this specification.

Normative text within this specification takes precedence over normative outlines, which in turn take precedence over the XML Schema [XML-Schema Part1, XML-Schema Part2] descriptions.
2 RM Policy Assertions

WS-Policy Framework and WS-Policy Attachment [WS-PolicyAttachment] collectively define a framework, model and grammar for expressing the requirements, and general characteristics of entities in an XML Web services-based system. To enable an RM Destination and an RM Source to describe their requirements for a given Sequence, this specification defines a single RM policy assertion that leverages the WS-Policy framework.

2.1 Assertion Model

The RM policy assertion indicates that the RM Source and RM Destination MUST use WS-ReliableMessaging to ensure reliable delivery of messages. Specifically, the WS-ReliableMessaging protocol determines invariants maintained by the reliable messaging endpoints and the directives used to track and manage the delivery of a Sequence of messages.

2.2 Normative Outline

The normative outline for the RM assertion is:

```xml
<wsrmp:RMAssertion [wsp:Optional="true"]? ... >
  <wsp:Policy>
    [ <wsrmp:SequenceSTR/> | <wsrmp:SequenceTransportSecurity/> ]?
    <wsrmp:DeliveryAssurance>
    <wsp:Policy>
      [ <wsrmp:ExactlyOnce/> | <wsrmp:AtLeastOnce/> | <wsrmp:AtMostOnce/>]
      <wsrmp:InOrder/>?
    </wsp:Policy>
    </wsrmp:DeliveryAssurance>?
  </wsp:Policy>
... 
</wsrmp:RMAssertion>
```

The following describes the content model of the RMAssertion element.

/wsrm:RMAssertion

A policy assertion that specifies that WS-ReliableMessaging protocol MUST be used when sending messages.

/wsrm:RMAssertion/@wsp:Optional="true"

Per WS-Policy, this is compact notation for two policy alternatives, one with and one without the assertion. The intuition is that the behavior indicated by the assertion is optional, or in this case, that WS-ReliableMessaging MAY be used.

/wsrm:RMAssertion/wsp:Policy

This required element allows for the inclusion of nested policy assertions.

/wsrm:RMAssertion/wsp:Policy/wsrm:SequenceSTR

When present, this assertion defines the requirement that an RM Sequence MUST be bound to an
explicit token that is referenced from a wsse:SecurityTokenReference in the CreateSequence message. See section 2.5.1.

(wsrm/MAssertion/wsp:Policy/wsrm:SequenceTransportSecurity

When present, this assertion defines the requirement that an RM Sequence MUST be bound to the session(s) of the underlying transport-level protocol used to carry the CreateSequence and CreateSequenceResponse message. When present, this assertion MUST be used in conjunction with the sp:TransportBinding assertion, see section 2.5.2.

(wsrm/MAssertion/wsp:Policy/wsrm:DeliveryAssurance

This expression, which may be omitted, describes the message delivery quality of service between the RM and application layer. When used by an RM Destination it expresses the delivery assurance in effect between the RM Destination and its corresponding application destination, and it also indicates requirements on any RM Source that transmits messages to this RM destination. Conversely when used by an RM Source it expresses the delivery assurance in effect between the RM Source and its corresponding application source, as well as indicating requirements on any RM Destination that receives messages from this RM Source. In either case the delivery assurance does not affect the messages transmitted on the wire. Absence of this expression from a wsrm:RMAssertion policy assertion simply means that the endpoint has chosen not to advertise its delivery assurance characteristics. Note that when there are multiple policy alternatives of the RM Assertion, the Delivery Assurance on each MUST NOT conflict.

This expresses the ExactlyOnce Delivery Assurance defined in [WS-RM].

(wsrm/MAssertion/wsp:Policy/wsrm:DeliveryAssurance/wsp:Policy/wsrm:AtLeastOnce

This expresses the AtLeastOnce Delivery Assurance defined in [WS-RM].

(wsrm/MAssertion/wsp:Policy/wsrm:DeliveryAssurance/wsp:Policy/wsrm:AtMostOnce

This expresses the AtMostOnce Delivery Assurance defined in [WS-RM].

This expresses the InOrder Delivery Assurance defined in [WS-RM].

(wsrm/MAssertion/{any}

This is an extensibility mechanism to allow different (extensible) types of information, based on a schema, to be passed.

(wsrm/MAssertion/@{any}

This is an extensibility mechanism to allow different (extensible) types of information, based on a schema, to be passed.

2.3 Assertion Attachment

The RM policy assertion is allowed to have the following Policy Subjects [WS-PolicyAttachment]:

wsrm-1.1-spec-cd-09
Copyright © OASIS® 1993–2007. All Rights Reserved. OASIS trademark, IPR and other policies apply. 5 April 2007 Page 9 of 18
311  •  Endpoint Policy Subject
312  •  Message Policy Subject

313  WS-PolicyAttachment defines a set of WSDL/1.1 policy attachment points for each of the above Policy Subjects. Since an RM policy assertion specifies a concrete behavior, it MUST NOT be attached to the abstract WSDL policy attachment points.

316  The following is the list of WSDL/1.1 elements whose scope contains the Policy Subjects allowed for an RM policy assertion but which MUST NOT have RM policy assertions attached:
318  •  wsdl:message
319  •  wsdl:portType/wsdl:operation/wsdl:input
320  •  wsdl:portType/wsdl:operation/wsdl:output
321  •  wsdl:portType/wsdl:operation/wsdl:fault
322  •  wsdl:portType

323  The following is the list of WSDL/1.1 elements whose scope contains the Policy Subjects allowed for an RM policy assertion and which MAY have RM policy assertions attached:
325  •  wsdl:port
326  •  wsdl:binding
327  •  wsdl:binding/wsdl:operation/wsdl:input
328  •  wsdl:binding/wsdl:operation/wsdl:output
329  •  wsdl:binding/wsdl:operation/wsdl:fault

330  If an RM policy assertion is attached to any of:
331  •  wsdl:binding/wsdl:operation/wsdl:input
332  •  wsdl:binding/wsdl:operation/wsdl:output
333  •  wsdl:binding/wsdl:operation/wsdl:fault

334  then an RM policy assertion, specifying wsp:Optional="true" MUST be attached to the corresponding wsdl:binding or wsdl:port, indicating that the endpoint supports WS-RM. Any messages, regardless of whether they have an attached Message Policy Subject RM policy assertion, MAY be sent to that endpoint using WS-RM. Additionally, the receiving endpoint MUST NOT reject any message belonging to a Sequence, simply because there was no Message Policy Subject RM policy assertion attached to that message. There might be certain RM implementations that are incapable of applying RM Quality of Service (QoS) semantics on a per-message basis. In order to ensure the broadest interoperability, when an endpoint decorates its WSDL with RM policy assertions using Message Policy Subject, it MUST also be prepared to accept that all messages sent to that endpoint might be sent within the context of an RM Sequence, regardless of whether the corresponding wsdl:input, wsdl:output or wsdl:fault had an attached RM policy assertion.

345  Rather than turn away messages that were unnecessarily sent with RM semantics, the receiving endpoint described by the WSDL MUST accept these messages.
By attaching an RM policy assertion that specifies \texttt{wsp:Optional="true"} to the corresponding endpoint that has attached RM policy assertions at the Message Policy Subject level, the endpoint is describing the above constraint in policy.

In the case where an optional RM Assertion applies to an output message, there is no requirement on the client to support an RM Destination implementation.

### 2.4 Assertion Example

Table 2 lists an example use of the RM policy assertion.

**Table 2: Example policy with RM policy assertion**

```xml
<wsdl:definitions
    targetNamespace="example.com"
    xmlns:tns="example.com"
    xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/
    xmlns:wsrmp="http://docs.oasis-open.org/ws-rx/wsrmp/200702"
    xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">

    <wsp:UsingPolicy wsdl:required="true" />

    <wsp:Policy wsu:Id="MyPolicy" >
        <wsrmp:RMAssertion>
            <wsp:Policy/>
        </wsrmp:RMAssertion>
        <!-- omitted assertions -->
    </wsp:Policy>

    <!-- omitted elements -->

    <wsdl:binding name="MyBinding" type="tns:MyPortType" >
        <wsp:PolicyReference URI="#MyPolicy" />
        <!-- omitted elements -->
    </wsdl:binding>

</wsdl:definitions>
```

Line (09) in Table 2 indicates that WS-Policy is in use as a required extension.

Lines (11-16) are a policy expression that includes a RM policy assertion (lines 12-14) to indicate that WS-ReliableMessaging must be used.

Lines (20-23) are a WSDL binding. Line (21) indicates that the policy in lines (11-16) applies to this binding, specifically indicating that WS-ReliableMessaging must be used over all the messages in the binding.

### 2.5 Sequence Security Policy

WS-SecurityPolicy [SecurityPolicy] provides a framework and grammar for expressing the security requirements and characteristics of entities in a XML web services based system. The following assertions MAY be used in conjunction with WS-SecurityPolicy to express additional security requirements particular to RM Sequences.
2.5.1 RM Assertion with Sequence STR Assertion

This version of the RM assertion includes the requirement that an RM Sequence MUST be bound to an explicit token that is referenced from a `<wsse:SecurityTokenReference>` in the `CreateSequence` message.

This assertion MUST apply to [Endpoint Policy Subject]. The normative outline for this form of the Sequence STR Assertion is:

```
<wsrmp:RMAssertion [wsp:Optional="true"]? ...>
  <wsp:Policy>
    <wsrmp:SequenceSTR/>
  </wsp:Policy>
</wsrmp:RMAssertion>
```

The following describes the content model of the `SequenceSTR` element.

A policy assertion that specifies security requirements which MUST be used with an RM Sequence that are particular to WS-RM and beyond what can be expressed in WS-SecurityPolicy.

2.5.2 RM Assertion with Sequence Transport Security Assertion

This version of the RM assertion includes the requirement that an RM Sequence MUST be bound to the session(s) of the underlying transport-level security protocol (e.g. SSL/TLS) used to carry the `CreateSequence` and `CreateSequenceResponse` messages.

This assertion MUST apply to [Endpoint Policy Subject]. This assertion MUST be used in conjunction with the `<sp:TransportBinding>` assertion that requires the use of some transport-level security mechanism (e.g. `<sp:HttpsToken>`).

The normative outline for this form of the RM Assertion with the Sequence Transport Security Assertion is:

```
<wsp:Policy>
  <wsp:ExactlyOne>
    <wsp:All>
      <wsrm:RMAssertion [wsp:Optional="true"]> ...>
        <wsp:Policy>
          <wsrm:SequenceTransportSecurity/>
        </wsp:Policy>
      </wsrm:RMAssertion>
      <sp:TransportBinding> ...
    </wsp:All>
  </wsp:ExactlyOne>
</wsp:Policy>
```

The following describes the content model of the `SequenceTransportSecurity` element.

`/wsrmp:SequenceTransportSecurity`
A policy assertion that specifies that any Sequences targeted to the indicated endpoint MUST be bound to the underlying session(s) of the transport-level security used to carry messages related to the Sequence.

This form of the RM Assertion says that an endpoint MAY have RM as an option but always requires HTTPS to be used. All the SequenceTransportSecurity assertion indicates is that RM's rules for protecting the Sequence over TLS are followed.
3 Security Considerations

It is strongly RECOMMENDED that policies and assertions be signed to prevent tampering.

It is RECOMMENDED that policies SHOULD NOT be accepted unless they are signed and have an associated security token to specify the signer has proper claims for the given policy. That is, a relying party shouldn't rely on a policy unless the policy is signed and presented with sufficient claims to pass the relying parties acceptance criteria.

It should be noted that the mechanisms described in this document could be secured as part of a SOAP message using WS-Security [WS-Security] or embedded within other objects using object-specific security mechanisms.
Appendix A. Schema

540 Pat Helland, Microsoft 551 James Snell, IBM
541 Rick Hill, Microsoft 552 Keith Stobie, Microsoft
542 Scott Hinkelman, IBM 553 Satish Thatte, Microsoft
543 Tim Holloway, IBM 554 Stephen Todd, IBM
544 Efim Hudis, Microsoft 555 Sanjiva Weerawarana, IBM
545 Johannes Klein, Microsoft 556 Roger Wolter, Microsoft

557 The following individuals were members of the committee during the development of this specification:

558 Abbie Barbir, Nortel 578 Peter Furniss, Erebor
559 Charlton Barreto, Adobe 579 Marc Goodner, Microsoft
560 Stefan Batres, Microsoft 580 Alastair Green, Choreology
561 Hamid Ben Malek, Fujitsu 581 Mike Grogan, Sun
562 Andreas Bjarlestad, Ericsson 582 Ondrej Hrebeeck, Microsoft
563 Toufic Boubeze, Layer 7 583 Kazunori Iwasa, Fujitsu
564 Doug Bunting, Sun 584 Chamikara Jayalath, WSO2
565 Lloyd Burch, Novell 585 Lei Jin, BEA
566 Steve Carter, Novell 586 Ian Jones, BTplc
567 Martin Chapman, Oracle 587 Anish Karmarkar, Oracle
568 Dave Chappell, Sonic 588 Paul Knight, Nortel
569 Paul Cotton, Microsoft 589 Dan Leshchinka, Tibco
570 Glen Daniels, Sonic 590 Mark Little, JBoss
571 Doug Davis, IBM 591 Lily Liu, webMethods
572 Blake Dournaee, Intel 592 Matt Lovett, IBM
573 Jacques Durand, Fujitsu 593 Ashok Malhotra, Oracle
574 Colleen Evans, Microsoft 594 Jonathan Marsh, Microsoft
575 Christopher Ferris, IBM 595 Daniel Millwood, IBM
576 Paul Fremantle, WSO2 596 Jeff Mischkinsky, Oracle
577 Robert Freund, Hitachi 597 Nilo Mitra, Ericsson
| 598 | Peter Niblett, IBM          | 608 | Tom Rutt, Fujitsu          |
| 599 | Duane Nickull, Adobe        | 609 | Rich Salz, IBM            |
| 600 | Eisaku Nishiyama, Hitachi  | 610 | Shivajee Samdarshi, Tibco  |
| 601 | Dave Orchard, BEA          | 611 | Vladimir Videlov, SAP     |
| 602 | Chouthri Palanisamy, NEC   | 612 | Claus von Riegen, SAP     |
| 603 | Sanjay Patil, SAP          | 613 | Pete Wenzel, Sun          |
| 604 | Gilbert Pilz, BEA          | 614 | Steve Winkler, SAP        |
| 605 | Martin Raeppe, SAP         | 615 | Ümit Yağcinalp, SAP       |
| 606 | Eric Rajkovic, Oracle      | 616 | Nobuyuki Yamamoto, Hitachi|
| 607 | Stefan Rossmanith, SAP     |      |                            |
