Technical Committee:

OASIS Security Services TC

Chair(s):

Hal Lockhart, BEA Systems, Inc.

Brian Campbell, Ping Identity Corporation

Editor(s):

Tom Scavo, National Center for Supercomputing Applications (NCSA)

Related Work:

This specification is an alternative to the *SAML V2.0 Attribute Sharing Profile for X.509 Authentication-Based Systems* [SAMLASP].

Declared XML Namespace(s):

[urn:oasis:names:tc:SAML:metadata:X509:query](#)

34 **Abstract:**

35 This related set of SAML V2.0 deployment profiles specifies how a principal who has been issued
36 an X.509 identity certificate is represented as a SAML Subject, how an assertion regarding such a
37 principal is produced and consumed, and finally how two entities exchange attributes about such
38 a principal.

39 **Status:**

40 This document was last revised or approved by the SSTC on the above date. The level of
41 approval is also listed above. Check the current location noted above for possible later revisions
42 of this document. This document is updated periodically on no particular schedule.

43 TC members should send comments on this specification to the TC's email list. Others
44 should send comments to the TC by using the "Send A Comment" button on the TC's
45 web page at <http://www.oasis-open.org/committees/security>.

46 For information on whether any patents have been disclosed that may be essential to
47 implementing this specification, and any offers of patent licensing terms, please refer to the IPR
48 section of the TC web page (<http://www.oasis-open.org/committees/security/ipr.php>).

49 The non-normative errata page for this specification is located at [http://www.oasis-](http://www.oasis-open.org/committees/security)
50 [open.org/committees/security](http://www.oasis-open.org/committees/security).

53 All capitalized terms in the following text have the meanings assigned to them in the OASIS Intellectual
54 Property Rights Policy (the "OASIS IPR Policy"). The full Policy may be found at the OASIS website.

55 This document and translations of it may be copied and furnished to others, and derivative works that
56 comment on or otherwise explain it or assist in its implementation may be prepared, copied, published,
57 and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice
58 and this section are included on all such copies and derivative works. However, this document itself may
59 not be modified in any way, including by removing the copyright notice or references to OASIS, except as
60 needed for the purpose of developing any document or deliverable produced by an OASIS Technical
61 Committee (in which case the rules applicable to copyrights, as set forth in the OASIS IPR Policy, must be
62 followed) or as required to translate it into languages other than English.

63 The limited permissions granted above are perpetual and will not be revoked by OASIS or its successors
64 or assigns.

65 This document and the information contained herein is provided on an "AS IS" basis and OASIS
66 DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY
67 WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY
68 OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A
69 PARTICULAR PURPOSE.

70 OASIS requests that any OASIS Party or any other party that believes it has patent claims that would
71 necessarily be infringed by implementations of this OASIS Committee Specification or OASIS Standard, to
72 notify OASIS TC Administrator and provide an indication of its willingness to grant patent licenses to such
73 patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced
74 this specification.

75 OASIS invites any party to contact the OASIS TC Administrator if it is aware of a claim of ownership of any
76 patent claims that would necessarily be infringed by implementations of this specification by a patent
77 holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR
78 Mode of the OASIS Technical Committee that produced this specification. OASIS may include such
79 claims on its website, but disclaims any obligation to do so.

80 OASIS takes no position regarding the validity or scope of any intellectual property or other rights that
81 might be claimed to pertain to the implementation or use of the technology described in this document or
82 the extent to which any license under such rights might or might not be available; neither does it represent
83 that it has made any effort to identify any such rights. Information on OASIS' procedures with respect to
84 rights in any document or deliverable produced by an OASIS Technical Committee can be found on the
85 OASIS website. Copies of claims of rights made available for publication and any assurances of licenses
86 to be made available, or the result of an attempt made to obtain a general license or permission for the
87 use of such proprietary rights by implementers or users of this OASIS Committee Specification or OASIS
88 Standard, can be obtained from the OASIS TC Administrator. OASIS makes no representation that any
89 information or list of intellectual property rights will at any time be complete, or that any claims in such list
90 are, in fact, Essential Claims.

91 The name "OASIS" is a trademark of [OASIS](http://www.oasis-open.org), the owner and developer of this specification, and should be
92 used only to refer to the organization and its official outputs. OASIS welcomes reference to, and
93 implementation and use of, specifications, while reserving the right to enforce its marks against
94 misleading uses. Please see <http://www.oasis-open.org/who/trademark.php> for above guidance.

152 1 Introduction

153 This related set of *SAML V2.0 Deployment Profiles for X.509 Subjects* describes how a principal who has
154 been issued an X.509 identity certificate is represented as a SAML Subject, how an assertion regarding
155 such a principal is produced and consumed, and finally how two entities exchange attributes about such a
156 principal.

157 1.1 Terminology

158 This specification uses normative text to describe the use of SAML assertions and attribute queries for
159 X.509 subjects.

160 The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD
161 NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this specification are to be interpreted as
162 described in [RFC 2119]:

163 ...they MUST only be used where it is actually required for interoperation or to limit behavior
164 which has potential for causing harm (e.g., limiting retransmissions)...

165 These keywords are thus capitalized when used to unambiguously specify requirements over protocol and
166 application features and behavior that affect the interoperability and security of implementations. When
167 these words are not capitalized, they are meant in their natural-language sense.

168 Listings of XML schemas appear like this.

169 Example code listings appear like this.

171 Conventional XML namespace prefixes are used throughout the listings in this specification to stand for
172 their respective namespaces as follows, whether or not a namespace declaration is present in the
173 example:

Prefix	XML Namespace	Comments
saml:	urn:oasis:names:tc:SAML:2.0:assertion	This is the SAML V2.0 assertion namespace [SAMLCore]. This is the default namespace used throughout this document.
samlp:	urn:oasis:names:tc:SAML:2.0:protocol	This is the SAML V2.0 protocol namespace [SAMLCore].
md:	urn:oasis:names:tc:SAML:2.0:metadata	This is the SAML V2.0 metadata namespace [SAMLMeta].
query:	urn:oasis:names:tc:SAML:metadata:ext:query	This is the SAML metadata query extension namespace [SAMLMeta-Ext].
x509qry:	urn:oasis:names:tc:SAML:metadata:X509:query	This is the SAML X.509 query namespace defined by this document and its accompanying schema [X509Query-XSD].
ds:	http://www.w3.org/2000/09/xmldsig#	This is the W3C XML Signature namespace, defined in the XML-Signature Syntax and Processing specification and schema [XMLSig-XSD].
xenc:	http://www.w3.org/2001/04/xmlenc#	This is the W3C XML Encryption namespace, defined in the XML Encryption Syntax and Processing specification [XMLEnc] and schema [XMLEnc-XSD].
xs:	http://www.w3.org/2001/XMLSchema	This is the XML Schema namespace [Schema1].

Prefix	XML Namespace	Comments
xsi:	http://www.w3.org/2001/XMLSchema-instance	This is the XML Schema namespace for schema-related markup that appears in XML instances [Schema1].

174 This specification uses the following typographical conventions in text: <UnqualifiedElement>,
175 <ns:QualifiedElement>, Attribute, **Datatype**, OtherKeyword.

176 The term *identity provider* as used in this specification refers to a typical SAML attribute authority
177 [SAMLGloss]. The term *service provider* refers to a SAML attribute requester. However, as used in this
178 specification, a service provider is not a typical SAML service provider since it performs X.509
179 authentication in lieu of consuming a SAML authentication assertion.

180 The term *X.509 identity certificate* as used in this specification refers to an X.509 end entity certificate
181 [RFC3280] or a certificate based on an X.509 end entity certificate (such as an X.509 proxy certificate
182 [RFC3820]).

183 1.2 Outline

184 Section 2 describes how a principal who has been issued an X.509 identity certificate is represented as a
185 SAML Subject. Section 3 describes in detail how a service provider and identity provider exchange
186 attributes about a principal who has been issued an X.509 identity certificate. Finally, section 4 describes
187 the special case where the requester is the subject of the query, that is, where the principal self-queries
188 for attributes.

252 **2 X.509 SAML Subject Profile**

253 The X.509 SAML Subject Profile describes how a principal who has been issued an X.509 identity
254 certificate is represented as a SAML V2.0 Subject.

255 **2.1 Required Information**

256 **Identification:**

257 urn:oasis:names:tc:SAML:2.0:profiles:query:attribute:X509-subject

258 **Contact information:** security-services-comment@lists.oasis-open.org

259 **Description:** Given below.

260 **Updates:** N/A

261 **Extends:** N/A

262 **2.2 Profile Description**

263 This deployment profile specifies a SAML V2.0 `<saml:Subject>` element that represents a principal
264 who has been issued an X.509 identity certificate. An entity that produces a `<saml:Subject>` element
265 according to this deployment profile MUST have previously determined that the principal does in fact
266 possess the corresponding private key.

267 **2.3 `<saml:Subject>` Usage**

268 The `<saml:Subject>` element MUST contain exactly one of `<saml:NameID>` or
269 `<saml:EncryptedID>`. The `<saml:Subject>` element MAY contain one or more
270 `<saml:SubjectConfirmation>` elements that are out of scope for this deployment profile.

271 **2.3.1 `<saml:NameID>` Usage**

272 If the `<saml:Subject>` element contains a `<saml:NameID>` element, the following requirements MUST
273 be satisfied:

- 274 • The value of the `<saml:NameID>` element is the Subject Distinguished Name (DN) from the
275 principal's X.509 identity certificate.
- 276 • The `<saml:NameID>` element MUST have a `Format` attribute whose value is
277 `urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName`. Thus the DN value
278 of the `<saml:NameID>` element MUST satisfy the rules of section 8.3.3 of [SAMLCore]. Moreover,
279 for the purposes of this deployment profile, the DN value MUST conform to RFC 2253 [RFC2253].
- 280 • As specified in [SAMLCore], the `NameQualifier` attribute of the `<saml:NameID>` element
281 SHOULD be omitted.

282 **2.3.2 `<saml:EncryptedID>` Usage**

283 If the `<saml:Subject>` element contains a `<saml:EncryptedID>` element, the content of the
284 enclosed `<xenc:EncryptedData>` element MUST be an encrypted `<saml:NameID>` element that
285 satisfies the requirements of the previous section.

286 To encrypt the `<saml:NameID>` element, exactly one of the following procedures MUST be followed:

- 287 • The producer generates a new symmetric key to encrypt the `<saml:NameID>` element. After

288 performing the encryption, the producer places the resulting ciphertext in the
289 <xenc:EncryptedData> element. The symmetric key MUST be encrypted with the consumer's
290 public key and the resulting ciphertext MUST be placed in the <xenc:EncryptedKey> element.

- 291 • The producer uses a symmetric key previously established with the consumer to encrypt the
292 <saml:NameID> element. After performing the encryption, the producer places the resulting
293 ciphertext in the <xenc:EncryptedData> element. In this case, however, the
294 <saml:EncryptedID> element MUST NOT contain an <xenc:EncryptedKey> element.

295 A symmetric key transmitted in an <xenc:EncryptedKey> element MUST NOT be later reused by the
296 producer as a previously established symmetric key.

297 2.4 Example

298 An example of an unencrypted X.509 SAML Subject:

```
299 <!-- unencrypted X.509 SAML Subject -->  
300 <saml:Subject>  
301   <saml:NameID  
302     Format="urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName">  
303     C=US, O=NCSA-TEST, OU=User, CN=trscavo@uiuc.edu  
304   </saml:NameID>  
305 </saml:Subject>
```

306 An example of an encrypted X.509 SAML Subject:

```
307 <!-- encrypted X.509 SAML Subject -->  
308 <saml:Subject>  
309   <saml:EncryptedID  
310     xmlns:xenc="http://www.w3.org/2001/04/xmlenc#">  
311     <xenc:EncryptedData  
312       Type="http://www.w3.org/2001/04/xmlenc#Element">  
313       ...  
314     </xenc:EncryptedData>  
315     <xenc:EncryptedKey  
316       Recipient="https://idp.example.org/saml">  
317       ...  
318     </xenc:EncryptedKey>  
319   </saml:EncryptedID>  
320 </saml:Subject>
```

321 **3 SAML Attribute Query Deployment Profile for X.509** 322 **Subjects**

323 The *SAML Attribute Query Deployment Profile for X.509 Subjects* specifies how a service provider and an
324 identity provider exchange attributes about a principal who has been issued an X.509 identity certificate.
325 As such, the profile relies on the X.509 SAML Subject Profile specified in section 2 of this document. Note
326 that the deployment profile specified in section 4 is an extension of this profile.

327 **3.1 Profile Overview (non-normative)**

328 Consider the use case where a principal attempts to access a secured resource at a service provider.
329 Principal authentication at the service provider is accomplished by presenting a trusted X.509 identity
330 certificate and by demonstrating proof of possession of the associated private key.

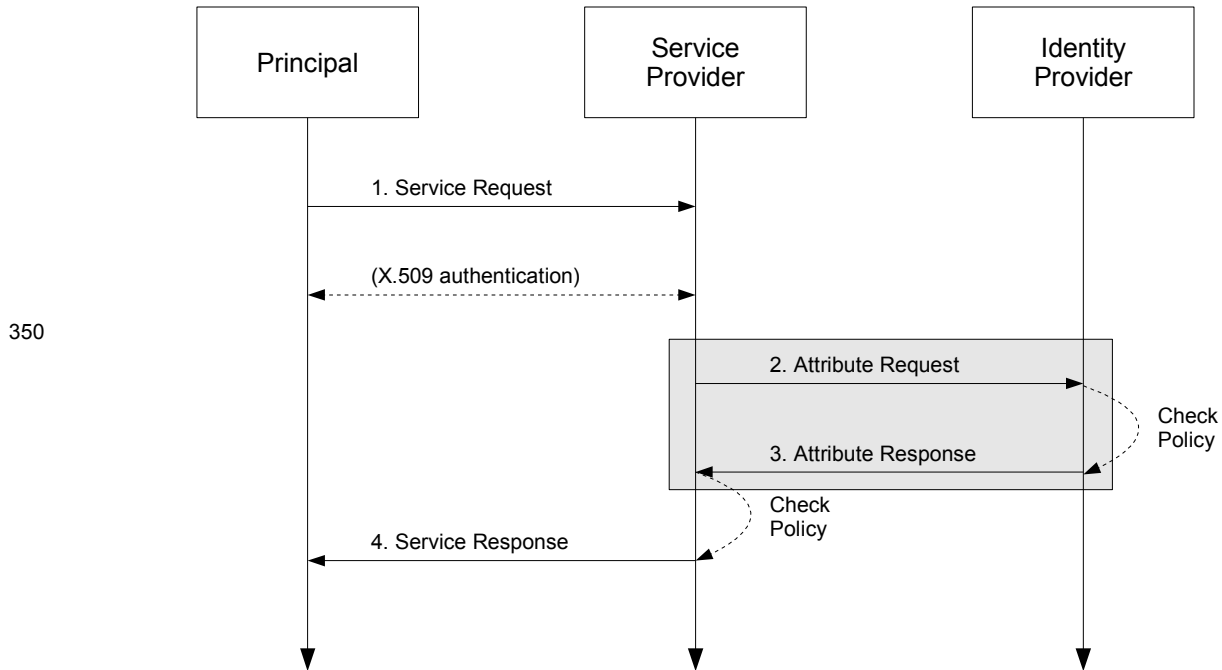

331 After the principal has been authenticated, the service provider requires additional information about the
332 principal in order to determine whether to grant access to the resource. To obtain this information, the
333 service provider uses the Subject Distinguished Name (DN) field (and perhaps other information) from the
334 principal's X.509 identity certificate to query an identity provider for attributes about the principal. Using the
335 attributes received from the identity provider, the service provider is able to make an informed access
336 control decision.

337 This use case is based upon the following assumptions:

- 338 • A principal possesses an X.509 identity credential.
- 339 • The principal wields a client that requests a service from a service provider.
- 340 • The client can access the principal's X.509 identity credential.
- 341 • The principal has an account with a SAML identity provider.
- 342 • The service provider knows the principal's preferred identity provider and is able to query that
343 identity provider for attributes.
- 344 • The identity provider is able to map an X.509 SAML Subject (as defined in section 2 of this
345 document) to one and only one principal in its security domain. In particular, the identity provider is
346 able to map the X.509 SAML Subject that represents this principal.

347 The sequence of steps for the full use case is shown below.

348 **Note:** The steps constrained by this profile are highlighted with a gray box. The other
349 steps are shown only for completeness; the profile does not constrain them.

351 **1. Service Request**

352 In step 1, the principal requests a secured resource from a service provider who requires that the
 353 principal be authenticated. The principal authenticates to the service provider with an X.509 identity
 354 certificate.

355 **2. Attribute Request**

356 In step 2, the service provider sends a SAML V2.0 `<samlp:AttributeQuery>` message to the
 357 identity provider using a SAML SOAP Binding. The Subject DN from the principal's X.509 identity
 358 certificate (presented in step 1) is used to construct the `<saml:Subject>` element.

359 **3. Attribute Response**

360 In step 3, after verifying that the service provider is a valid requester, the identity provider issues a
 361 `<samlp:Response>` message containing appropriate attributes pertaining to the principal. The
 362 attributes returned to the service provider are subject to policy at the identity provider.

363 **4. Service Response**

364 In step 4, based on the attributes received from the identity provider, the service provider returns the
 365 requested resource or an error, subject to policy.

366 Of the sequence of steps described above, it is steps 2 and 3 that are profiled in sections 3.3 and 3.4 of
 367 this deployment profile.

368 **3.2 Required Information**

369 **Identification:**

370 `urn:oasis:names:tc:SAML:2.0:profiles:query:attribute:X509`

371 **Contact information:** security-services-comment@lists.oasis-open.org

372 **Description:** Given below.

373 **Updates:** N/A

374 **Extends:** Assertion Query/Request Profile [SAMLProf]

375 **3.3 Profile Description**

376 This deployment profile describes the use of the SAML V2.0 Assertion Query and Request Protocol
377 [SAMLCore] in conjunction with the SAML V2.0 SOAP Binding [SAMLBind] to retrieve the attributes of a
378 principal who has authenticated using an X.509 identity certificate. The attribute exchange MUST conform
379 to the Assertion Query/Request Profile given in section 6 of [SAMLProf] unless otherwise specified below.

380 As outlined in section 3.1, a service provider sends a SAML V2.0 `<samlp:AttributeQuery>` message
381 directly to an identity provider. This message contains a name identifier that identifies a principal who has
382 authenticated to the service provider using an X.509 identity certificate. If the identity provider receiving the
383 request can:

- 384 • recognize the name identifier; and
- 385 • fulfill the request subject to any applicable policies;

386 the identity provider responds with a successful `<samlp:Response>` containing the relevant attributes for
387 the identified principal.

388 **3.3.1 `<samlp:AttributeQuery>` Issued by Service Provider**

389 To initiate the profile, the service provider uses a synchronous binding such as the SAML SOAP Binding
390 [SAMLBind] to send a SAML V2.0 `<samlp:AttributeQuery>` message to an Attribute Service
391 endpoint at the identity provider. SAML metadata (section 3.8) MAY be used to determine the endpoint
392 locations and bindings supported by the identity provider.

393 The service provider uses information obtained from the principal's X.509 identity certificate to construct
394 the query. As required by the X.509 SAML Subject Profile (section 2), the service provider MUST have
395 previously determined that the principal does in fact possess the corresponding private key. The details of
396 this step are out of scope for this deployment profile.

397 The service provider MUST authenticate itself to the identity provider. SSL 3.0 [SSL3] or TLS 1.0
398 [RFC2246] with client authentication MAY be used for this purpose and to provide integrity protection and
399 confidentiality. Also, the `<samlp:AttributeQuery>` element MAY be signed.

400 **3.3.2 `<samlp:Response>` Issued by Identity Provider**

401 The identity provider MUST process the request as outlined in [SAMLCore]. After processing the message
402 or upon encountering an error, the identity provider MUST return a `<samlp:Response>` message
403 containing an appropriate status code to the service provider to complete the SAML protocol exchange. If
404 the identity provider is successful in locating one or more attributes for this principal, they will be included
405 in the response.

406 The identity provider MUST be able to map the referenced X.509 Subject to one and only one principal in
407 its security domain. If the identity provider is not able to map the `<saml:Subject>` element to a local
408 principal, it MUST return an error.

409 The identity provider processes the `<samlp:AttributeQuery>` element and any enclosed
410 `<saml:Attribute>` elements before returning an assertion containing a
411 `<saml:AttributeStatement>` to the requester. If no `<saml:Attribute>` elements are included in
412 the query, the identity provider returns all attributes for this principal, subject to policy. SAML metadata
413 (section 3.8) MAY be used to determine the attribute requirements of the service provider. If the identity
414 provider is unable to resolve attributes for this principal (for any reason), it MUST return an error.

415 The identity provider MUST authenticate itself to the service provider. Also, either the
416 `<samlp:Response>` element or the `<saml:Assertion>` element (or both) MAY be signed.

417 3.4 Use of SAML Request-Response Protocol

418 As required by the Assertion Query/Request Profile [SAMLProf], the `<samlp:AttributeQuery>`
419 element MUST contain a `<saml:Issuer>` element.

420 3.4.1 `<samlp:AttributeQuery>` Usage

421 The request MUST contain a `<samlp:AttributeQuery>` element that conforms to the following rules:

- 422 • The `<saml:Subject>` element MUST conform to the X.509 SAML Subject Profile defined in
423 section 2 of this document.
- 424 • The `<saml:Subject>` element MUST NOT contain a `<saml:SubjectConfirmation>`
425 element.
- 426 • The `<samlp:AttributeQuery>` element MAY include one or more `<saml:Attribute>`
427 elements.

428 3.4.2 `<samlp:Response>` Usage

429 If the request is successful, the `<samlp:Response>` element MUST conform to the following rules. Any
430 assertion(s) included in the response may be encrypted or unencrypted. See section 2 of the SAML V2.0
431 Assertions and Protocols specification [SAMLCore] for general requirements regarding SAML assertions.

432 For each `<saml:Assertion>` element the following conditions MUST be satisfied:

- 433 • The `<saml:Subject>` element (which strongly matches the subject of the query [SAMLCore])
434 SHOULD NOT contain a `<saml:SubjectConfirmation>` element.
- 435 • The `<saml:Assertion>` element MUST contain a `<saml:Conditions>` element with
436 `NotBefore` and `NotOnOrAfter` attributes.
- 437 • The `<saml:Assertion>` element SHOULD contain a `<saml:Audience>` element whose value
438 is identical to the value of the `<saml:Issuer>` element in the request.
- 439 • Other conditions (including other `<saml:Audience>` elements) MAY be included as required by
440 the service provider or at the discretion of the identity provider.
- 441 • The `<saml:Assertion>` element MUST contain at least one `<saml:AttributeStatement>`
442 element and SHOULD contain *only* `<saml:AttributeStatement>` elements.

443 For each `<saml:EncryptedAssertion>` element, the content of the enclosed
444 `<xenc:EncryptedData>` element MUST be an encrypted `<saml:Assertion>` element that satisfies
445 the above requirements.

446 To encrypt the `<saml:Assertion>` element, exactly one of the following procedures MUST be followed:

- 447 • The identity provider generates a new symmetric key to encrypt the `<saml:Assertion>` element.
448 After performing the encryption, the identity provider places the resulting ciphertext in the
449 `<xenc:EncryptedData>` element. The symmetric key MUST be encrypted with the service
450 provider's public key and the resulting ciphertext placed in the `<xenc:EncryptedKey>` element.
- 451 • The identity provider uses a symmetric key previously established with the service provider to
452 encrypt the `<saml:Assertion>` element. After encrypting the `<saml:Assertion>` element
453 using this key, the identity provider places the resulting ciphertext in the `<xenc:EncryptedData>`
454 element. In this case, however, the `<saml:EncryptedAssertion>` element MUST NOT contain
455 an `<xenc:EncryptedKey>` element.

456 See section 3.6 for additional rules regarding encryption.

457 If the request is unsuccessful and the identity provider wishes to return an error, the `<samlp:Response>`

458 element MUST NOT contain a <saml:Assertion> element. Possible error responses include the
459 following:

- 460 • The identity provider MAY return one of the status codes
461 urn:oasis:names:tc:SAML:2.0:status:UnknownAttrProfile or
462 urn:oasis:names:tc:SAML:2.0:status:InvalidAttrNameOrValue as suggested in
463 section 3.3.2.3 of [SAMLCore].
- 464 • If the identity provider does not recognize the <saml:NameID> element or otherwise is unable to
465 map the <saml:NameID> element to a local principal name, it MAY return the following status
466 code:
467 urn:oasis:names:tc:SAML:2.0:status:UnknownPrincipal

468 3.5 Example

469 For example, the requester issues the following attribute query:

```
470 <samlp:AttributeQuery
471   xmlns:saml="urn:oasis:names:tc:SAML:2.0:assertion"
472   xmlns:samlp="urn:oasis:names:tc:SAML:2.0:protocol"
473   ID="aaf23196-1773-2113-474a-fe114412ab72"
474   Version="2.0"
475   IssueInstant="2006-07-17T22:26:40Z">
476   <saml:Issuer>https://sp.example.org/saml</saml:Issuer>
477   <saml:Subject>
478     <saml:NameID
479       Format="urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName">
480       C=US, O=NCSA-TEST, OU=User, CN=trscavo@uiuc.edu
481     </saml:NameID>
482   </saml:Subject>
483   <saml:Attribute
484     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
485     x500:Encoding="LDAP"
486     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
487     Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.6"
488     FriendlyName="eduPersonPrincipalName">
489   </saml:Attribute>
490   <saml:Attribute
491     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
492     x500:Encoding="LDAP"
493     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"

549         NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
550         Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.1"
551         FriendlyName="eduPersonAffiliation">
552         <saml:AttributeValue xsi:type="xs:string">
553           member
554         </saml:AttributeValue>
555         <saml:AttributeValue xsi:type="xs:string">
556           staff
557         </saml:AttributeValue>
558       </saml:Attribute>
559     </saml:AttributeStatement>
560   </saml:Assertion>
561 </samlp:Response>

```

562 The attributes in the above example (eduPersonAffiliation and eduPersonPrincipalName)
563 conform to the MACE-Dir Attribute Profile for SAML 2.0 [MACEAttrib] and are for illustration purposes
564 only.

565 3.6 Use of Encryption

566 If the service provider encrypts the <saml:NameID> element in the query, the identity provider SHOULD
567 encrypt any resulting assertions. Moreover, if the service provider uses a previously established symmetric
568 key, the identity provider SHOULD use the same symmetric key to encrypt the assertion. In the case
569 where the service provider generates a new symmetric key, the identity provider MUST treat this key as a
570 previously established key, that is, the identity provider SHOULD use the same symmetric key to encrypt
571 the assertion and MUST NOT encrypt this key into the <xenc:EncryptedKey> element.

572 An encryption algorithm satisfying FIPS 140-2 Security Requirements [FIPS 140-2] SHALL be used for all
573 encryption operations.

574 3.7 Use of Digital Signatures

575 If the service provider encrypts the `<saml:NameID>` element in the query, the
576 `<samlp:AttributeQuery>` element **MUST** be signed *after* the encryption operation takes place. If the
577 identity provider encrypts a `<saml:Assertion>` element in the response, the `<saml:Assertion>`
578 element **MUST** be signed *before* the encryption operation takes place. Whether or not an assertion is
579 encrypted, the `<saml:Response>` element **MAY** be signed.

580 A signing algorithm satisfying FIPS 140-2 Security Requirements [FIPS 140-2] **SHALL** be used for all
581 digital signature operations on encrypted elements or elements with encrypted content.

582 3.8 Use of Metadata

583 The identity provider and the service provider **MAY** use metadata for locating endpoints, communicating
584 key information, and so forth. The use of SAML V2.0 metadata [SAMLMeta], which is **RECOMMENDED**,
585 is profiled in sections 3.8.1 and 3.8.2 below.

586 3.8.1 Identity Provider Metadata

587 An identity provider that uses SAML V2.0 metadata **MUST** include an
588 `<md:AttributeAuthorityDescriptor>` element that satisfies the following rules:

- 589 • The containing `<md:EntityDescriptor>` element **MUST** have an `entityID` attribute whose
590 value is the same unique identifier given as the `<saml:Issuer>` element in assertions issued by
591 the identity provider.
- 592 • The `<md:AttributeAuthorityDescriptor>` element **MUST** include an
593 `<md:NameIDFormat>` element with value `"urn:oasis:names:tc:SAML:1.1:nameid-`
594 `format:X509SubjectName"`.
- 595 • One or more `<saml:Attribute>` elements **MAY** be included in the
596 `<md:AttributeAuthorityDescriptor>` element. Since a service provider may choose not to
597 query the identity provider based on the attributes in this list, this list **SHOULD** be comprehensive or
598 otherwise omitted.

599 To distinguish between this deployment profile and other uses of `X509SubjectName`, an identity provider
600 requires the means to explicitly call out its support of this deployment profile. An XML attribute has been
601 specified for this purpose [X509Query-XSD]:

```
602 <xs:attribute  
603   name="supportsX509Query" type="boolean" use="optional"/>
```

604 Use of this attribute is **OPTIONAL**. An identity provider that chooses to use this attribute, however, **MUST**
605 do so as follows:

- 606 • The `<md:AttributeAuthorityDescriptor>` element **MUST** include at least one
607 `<md:AttributeService>` element having attribute `supportsX509Query` set to `"true"`.
- 608 • At least one `<md:AttributeService>` element having attribute `supportsX509Query` set to
609 `"true"` **MUST** have its `Binding` attribute set to
610 `"urn:oasis:names:tc:SAML:2.0:bindings:SOAP"`.

611 An example of identity provider metadata follows:

```
612 <!-- An Identity Provider supporting this deployment profile -->  
613 <md:EntityDescriptor  
614   xmlns:md="urn:oasis:names:tc:SAML:2.0:metadata"  
615   entityID="https://idp.example.org/saml">  
616  
617   <md:AttributeAuthorityDescriptor  
618     protocolSupportEnumeration="urn:oasis:names:tc:SAML:2.0:protocol">
```

```

620     <md:AttributeService
621         x509qry:supportsX509Query="true"
622         xmlns:x509qry="urn:oasis:names:tc:SAML:metadata:X509:query"
623         Binding="urn:oasis:names:tc:SAML:2.0:bindings:SOAP"
624         Location="https://idp.example.org:8443/saml-idp/AA"/>
625
626     <md:NameIDFormat>
627         urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName
628     </md:NameIDFormat>
629
630     <!-- see [MACEAttr] -->
631     <md:AttributeProfile>
632         urn:mace:dir:profiles:attribute:samlv2
633     </md:AttributeProfile>
634
635 </md:AttributeAuthorityDescriptor>
636
637 </md:EntityDescriptor>

```

638 3.8.2 Service Provider Metadata

639 A service provider that uses SAML V2.0 metadata **MUST** include an `<md:RoleDescriptor>` element
640 that satisfies the following rules:

- 641 • The containing `<md:EntityDescriptor>` element **MUST** have an `entityID` attribute whose
642 value is the same unique identifier used as the `<saml:Issuer>` element in attribute queries
643 issued by the service provider.
- 644 • The type of the `<md:RoleDescriptor>` element **MUST** be derived from type
645 **query:AttributeQueryDescriptorType** [SAMLMeta-Ext].
- 646 • The `<md:RoleDescriptor>` element **MUST** include an `<md:NameIDFormat>` element with
647 value "urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName".
- 648 • One or more `<md:RequestedAttribute>` elements **MAY** be included in the
649 `<md:AttributeConsumingService>` element.

650 An example of service provider metadata follows:

```

651 <!-- A Service Provider supporting this profile -->
652 <md:EntityDescriptor
653     xmlns:md="urn:oasis:names:tc:SAML:2.0:metadata"
654     entityID="https://sp.example.org/saml">
655
656     <md:RoleDescriptor
657         xmlns:query="urn:oasis:names:tc:SAML:metadata:ext:query"
658         xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
659         xsi:type="query:AttributeQueryDescriptorType"
660         protocolSupportEnumeration="urn:oasis:names:tc:SAML:2.0:protocol">
661
662         <md:NameIDFormat>
663             urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName
664         </md:NameIDFormat>
665
666         <md:AttributeConsumingService isDefault="true" index="0">

```
678         FriendlyName="eduPersonAffiliation">
679         </md:RequestedAttribute>
680         </md:AttributeConsumingService>
681
682     </md:RoleDescriptor>
683
684 </md:EntityDescriptor>
```

685 The attributes in the above example (`eduPersonAffiliation` and `eduPersonPrincipalName`)
686 conform to the MACE-Dir Attribute Profile for SAML 2.0 [MACEAttrib] and are for illustration purposes
687 only.

688 **3.9 Security and Privacy Considerations**

689 The motivation for this deployment profile is to specify a secure means of obtaining SAML attributes in
690 conjunction with X.509 authentication.

691 **3.9.1 Background**

692 The SAML Security and Privacy specification [SAMLSecure] provides general background material
693 relevant to all SAML bindings and profiles. Section 6.1 of [SAMLSecure], in particular, considers the
694 security requirements of the SAML SOAP Binding, and is therefore pertinent to this deployment profile. In
695 addition, section 3.1.2 of the SAML Bindings specification [SAMLBind] provides further security guidelines
696 regarding SAML bindings.

697 **3.9.2 General Security Requirements**

698 SAML profiles often involve a system entity that relies on an earlier act of user authentication. For
699 example, the SAML Web Browser SSO Profile [SAMLProf] relies on an authentication service that
700 validates a credential (typically a username/password) for a user. The authentication service must be
701 securely linked to an identity provider that issues SAML authentication assertions based on that user's act
702 of authentication. Similarly, this deployment profile assumes that the system entity that performs the
703 X.509 authentication is operating in a secure environment that includes the attribute requester.

704 In this deployment profile, an end user presents an X.509 identity certificate to authenticate at the service
705 provider. The system entity that performs this authentication (i.e., validates the certificate and its trust
706 chain) must be securely linked to the SAML attribute requester that subsequently initiates this deployment
707 profile. The latter must have a secure means of obtaining the X.509 subject name (and other information)
708 from the certificate and issuing a SAML V2.0 `<samlp:AttributeQuery>` for that subject to the
709 appropriate asserting party. The mechanism by which these system entities are linked is out of scope for
710 this deployment profile.

711 Local policy settings at the attribute authority will determine whether or not the asserting party is permitted
712 to return attributes for the requested subject.

713 **3.9.3 User Privacy**

714 Since a DN persists for the life of the certificate, a service provider may query for attributes at any time.
715 To prevent service providers from querying for attributes after the certificate has expired, an identity
716 provider SHOULD check the lifetime of the referenced certificate before issuing an assertion regarding an
717 X.509 Subject. If the certificate has expired, an error should be returned.

718 As a further privacy measure, the principal may use a short-lived X.509 identity certificate. For example,
719 an X.509 proxy certificate [RFC3820]) may be used.

720 **3.10 Implementation Guidelines (non-normative)**

721 The following non-normative guidelines are provided for the convenience of implementers.

722 **3.10.1 Discovery**

723 The service provider must determine the principal's preferred identity provider. This is called *identity*
724 *provider discovery*.

725 Some possible approaches to identity provider discovery in the context of this deployment profile are
726 discussed briefly below:

- 727 • The identity provider's unique identifier may be preconfigured at the service provider. This is useful,
728 for instance, if there is only one identity provider per deployment.
- 729 • The subject DN of the principal's X.509 identity certificate may include a reference to the identity
730 provider. New deployments are discouraged from decorating long-lived DNs in this manner,
731 however, since this practice may lessen interoperability with existing PKIs. For short-lived X.509
732 identity certificates, this practice may be satisfactory.
- 733 • The issuer DN or the issuer alternative name may provide clues about the principal's preferred
734 identity provider. This technique may not be practical, however, since SAML authorities do not
735 typically issue X.509 credentials.
- 736 • A reference to the identity provider may be inserted into a non-critical X.509 extension [RFC3280] at
737 the time the credential is issued. For long-term credentials, this practice may not be feasible, but
738 for short-term credentials, this technique may be satisfactory.

739 This deployment profile does not specify a particular method of identity provider discovery.

740 **3.10.2 Name Mapping**

741 An identity provider that consumes a `<saml:Subject>` element produced according to this deployment
742 profile must be able to map the referenced X.509 Subject to one and only one principal in its security
743 domain. If the identity provider issued the X.509 credential in the first place, or otherwise has access to
744 the principal's X.509 identity certificate, this should be straightforward. Otherwise a persistent certificate
745 registration process to facilitate the mapping of X.509 Subjects to principals may be used.

746 **3.10.3 Canonicalization**

747 According to this deployment profile, the format of the DNs used to construct the `<saml:Subject>`
748 element is dictated by [SAMLCore]. Since the latter allows some flexibility in the precise format of a DN
749 (by virtue of its dependence on [RFC2253]), it may be necessary for an identity provider to canonicalize
750 the DN during the course of mapping it to a local principal name. Note that the details of the
751 canonicalization process are of concern only to the identity provider. As long as the service provider
752 provides a DN whose canonicalization is recognized by the identity provider, the correct mapping will
753 occur.

754 **3.10.4 Identity Provider Policy**

755 Service providers may explicitly enumerate the required attributes in queries or may issue so-called
756 "empty queries" that essentially request all available attributes. Regardless of the attribute requirements
757 called out in the query (or in metadata, if used for this purpose), it is the identity provider that determines
758 the actual attributes returned to the service provider. Thus a responsible identity provider will initiate and
759 enforce policy that strictly limits the attributes released to service providers.

760 **3.10.5 Caching of Attributes**

761 A service provider will most likely provide a capability to cache user attributes returned in assertions. If so,
762 cache expiration settings should be configurable by administrators.

4 SAML Attribute Self-Query Deployment Profile for X.509 Subjects

763

764

765 The *SAML Attribute Self-Query Deployment Profile for X.509 Subjects* specifies how a principal who has
766 been issued an X.509 identity certificate self-queries an identity provider for attributes. The profile extends
767 the SAML Attribute Query Deployment Profile for X.509 Subjects specified in section 3 of this document.
768 Where the two profiles conflict, this deployment profile takes precedence.

4.1 Profile Overview (non-normative)

769

770 In this scenario, a principal self-queries an identity provider for attributes. The principal uses the Subject
771 Distinguished Name (DN) field (and perhaps other information) from its X.509 identity certificate to
772 formulate the query. Principal authentication is accomplished by presenting a trusted X.509 identity
773 certificate (the same certificate used to construct the query) and by demonstrating proof of possession of
774 the associated private key. After the principal has been authenticated, the identity provider binds the
775 principal's public key to an assertion, which is issued directly to the principal.

776 The principal subsequently requests a secured resource at the service provider. The principal presents
777 the previously obtained assertion to the service provider and demonstrates proof of possession of the
778 corresponding private key. Using the attributes in the assertion, the service provider is able to make an
779 informed access control decision.

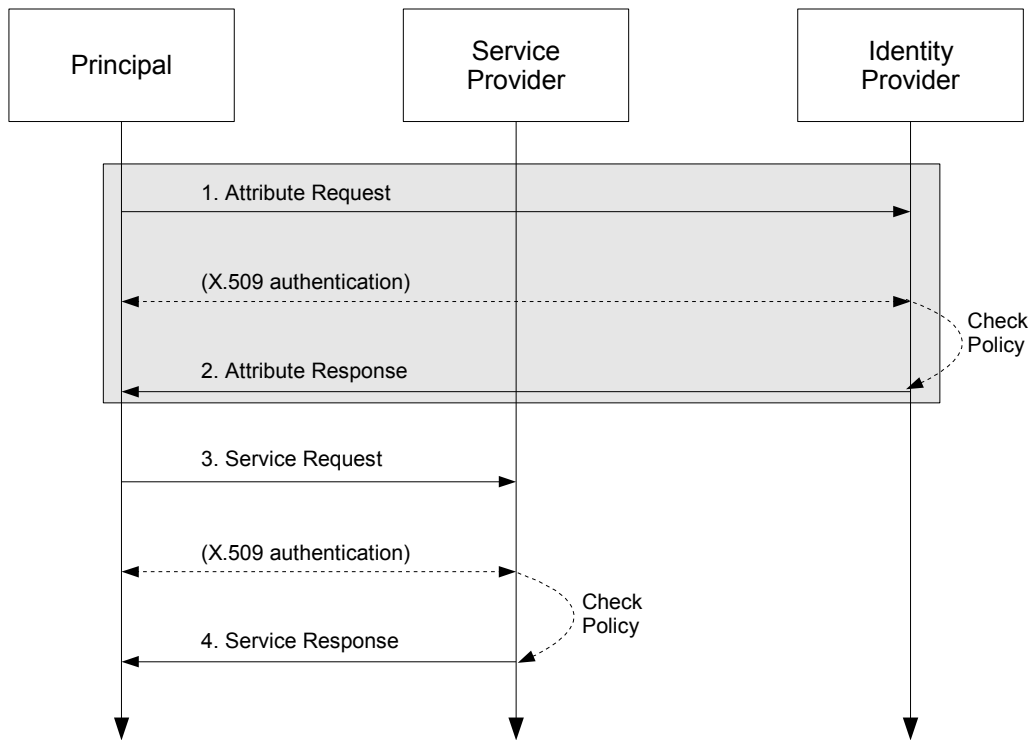

780 This use case is based on the following assumptions:

- 781 • A principal possesses an X.509 credential.
- 782 • The principal wields a client that can both query an identity provider for attributes and request a
783 service from a service provider.
- 784 • The client can access the principal's X.509 credential.
- 785 • The principal has an account with a SAML identity provider.
- 786 • The client knows the principal's preferred identity provider and the attribute requirements of the
787 target service provider.
- 788 • The identity provider is able to map an X.509 SAML Subject (as defined in section 2 of this
789 document) to one and only one principal in its security domain. In particular, the identity provider is
790 able to map the X.509 SAML Subject that represents this principal.

791 Note that in the case of a self-query, the client possesses significantly more functionality than the client
792 alluded to in section 3.1.

793 The sequence of steps for the full use case is shown below.

794 **Note:** The steps constrained by this profile are highlighted with a gray box. The other
795 steps are shown only for completeness; the profile does not constrain them.

796

797 **1. Attribute Request**

798 In step 1, the principal sends a SAML V2.0 `<samlp:AttributeQuery>` message to the identity
 799 provider using a SAML SOAP Binding. The Subject DN from the principal's X.509 identity certificate is
 800 used to construct the `<saml:Subject>` element of the query. The identity provider requires that the
 801 principal be authenticated. The principal authenticates to the identity provider using the same X.509
 802 credential used to construct the query.

803 **2. Attribute Response**

804 In step 2, after verifying that the principal is a valid requester, the identity provider issues a
 805 `<samlp:Response>` message containing appropriate attributes. The attributes returned to the
 806 principal are subject to policy at the identity provider.

807 **3. Service Request**

808 In step 3, the principal requests a secured resource at the service provider. The principal presents the
 809 assertion obtained at step 2 to the service provider. The service provider requires that the principal be
 810 authenticated. The principal authenticates to the service provider using the same X.509 credential
 811 used to authenticate to the identity provider at step 1.

812 **4. Service Response**

813 In step 4, based on the attributes in the pushed assertion, the service provider returns the requested
 814 resource or an error, subject to policy.

815 Of the sequence of steps described above, it is steps 1 and 2 that are profiled in sections 4.3 and 4.4 of
 816 this deployment profile.

817 **4.2 Required Information**

818 **Identification:**

819 `urn:oasis:names:tc:SAML:2.0:profiles:query:attribute:X509-self`

820 **Contact information:** security-services-comment@lists.oasis-open.org

821 **Description:** Given below.

822 **Updates:** N/A

823 **Extends:** SAML Attribute Query Deployment Profile for X.509 Subjects (section 3)

824 **4.3 Profile Description**

825 This deployment profile extends the SAML Attribute Query Deployment Profile for X.509 Subjects
826 described in section 3.3.

827 As outlined in section 4.1, a principal sends a SAML V2.0 `<samlp:AttributeQuery>` message directly
828 to an identity provider. The principal authenticates to the identity provider using an X.509 identity
829 certificate. If the identity provider receiving the request can:

- 830 • recognize the name identifier; and
- 831 • determine that the requester is the principal; and
- 832 • fulfill the request subject to any applicable policies;

833 the identity provider responds with a successful `<samlp:Response>` containing the relevant attributes for
834 the principal. To determine that the requester is the principal, the identity provider **MUST** authenticate the
835 principal.

836 **4.3.1 `<samlp:AttributeQuery>` Issued by Principal**

837 To initiate the profile, the principal uses a synchronous binding such as the SAML SOAP Binding
838 [SAMLBind] to send a SAML V2.0 `<samlp:AttributeQuery>` message as described in section 3.3.

839 The principal uses information obtained from its X.509 identity certificate to construct the query. The
840 principal **MUST** authenticate itself to the identity provider using the same X.509 credential used to
841 construct the query. SSL 3.0 [SSL3] or TLS 1.0 [RFC2246] with client authentication **MAY** be used for this
842 purpose and to provide integrity protection and confidentiality.

843 **4.3.2 `<samlp:Response>` Issued by Identity Provider**

844 The identity provider **MUST** process the request as outlined in section 3.3.

845 **4.4 Use of SAML Request-Response Protocol**

846 As required by the Assertion Query/Request Profile [SAMLProf], the `<samlp:AttributeQuery>`
847 element **MUST** contain a `<saml:Issuer>` element. Since the requester is the principal, the
848 `<saml:Issuer>` element **MUST** be identical to the `<saml:NameID>` element, that is, both **MUST** satisfy
849 the rules of the X.509 SAML Subject Profile (section 2).

850 **4.4.1 `<samlp:AttributeQuery>` Usage**

851 The request **MUST** contain a `<samlp:AttributeQuery>` element that conforms to the rules of
852 section 3.4.1.

853 **4.4.2 `<samlp:Response>` Usage**

854 If the request is successful, the `<samlp:Response>` element **MUST** conform to the rules of section 3.4.2
855 except as noted below:

- 856 • The `<saml:Subject>` element **MUST** contain a `<saml:SubjectConfirmation>` element

- 857 whose Method attribute has value "urn:oasis:names:tc:SAML:2.0:cm:holder-of-key".
- 858 • A <saml:SubjectConfirmationData> element MUST be present and it MUST contain a
 - 859 <ds:KeyInfo> element that refers to the principal's X.509 identity certificate.
 - 860 • On the <saml:Conditions> element, the value of the NotBefore attribute (resp., the
 - 861 NotOnOrAfter attribute) MUST be greater than or equal to (resp., less than or equal to) the
 - 862 NotBefore field (resp., the NotOnOrAfter field) of the certificate.
 - 863 • The <saml:Assertion> element MUST be signed.
 - 864 • The <saml:Assertion> element MAY include a <saml:AuthnStatement> element.

865 4.4.3 Processing Rules

866 In addition to the assertion processing rules outlined in [SAMLCore], the service provider MUST verify the
867 following:

- 868 • The <saml:SubjectConfirmationData> element MUST be present and it MUST contain a
- 869 <ds:KeyInfo> element that refers to the principal's X.509 identity certificate.
- 870 • The value of the NotBefore attribute (resp., the NotOnOrAfter attribute) MUST be greater than
- 871 or equal to (resp., less than or equal to) the NotBefore field (resp., the NotOnOrAfter field) of
- 872 the certificate.

873 The certificate referred to in the above processing rules MUST be the same certificate used to construct
874 the <saml:Subject> of the query.

875 4.5 Example

876 For example, the principal issues the following attribute query:

```
877 <samlp:AttributeQuery
878   xmlns:saml="urn:oasis:names:tc:SAML:2.0:assertion"
879   xmlns:samlp="urn:oasis:names:tc:SAML:2.0:protocol"
880   ID="aaf23196-1773-2113-474a-fe114412ab72"
881   Version="2.0"
882   IssueInstant="2006-07-17T20:31:40Z">
883   <saml:Issuer
884     Format="urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName">
885     C=US, O=NCSA-TEST, OU=User, CN=trscavo@uiuc.edu
886   </saml:Issuer>
887   <saml:Subject>
888     <saml:NameID
889       Format="urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName">
890       C=US, O=NCSA-TEST, OU=User, CN=trscavo@uiuc.edu
891     </saml:NameID>
892   </saml:Subject>
893   <saml:Attribute
894     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
895     Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.6"
896     FriendlyName="eduPersonPrincipalName">
897   </saml:Attribute>
898   <saml:Attribute
899     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
900     Name="urn:oid:2.5.4.42"
901     FriendlyName="givenName">
902   </saml:Attribute>
903   <saml:Attribute
904     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
905     Name="urn:oid:2.5.4.4"
906     FriendlyName="sn">
907   </saml:Attribute>
908   <saml:Attribute
```

```

974 <saml:AttributeStatement>
975   <saml:Attribute
976     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
977     x500:Encoding="LDAP"
978     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
979     Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.6"
980     FriendlyName="eduPersonPrincipalName">
981     <saml:AttributeValue xsi:type="xs:string">
982       trscavo@uiuc.edu
983     </saml:AttributeValue>
984   </saml:Attribute>
985   <saml:Attribute
986     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
987     x500:Encoding="LDAP"
988     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
989     Name="urn:oid:2.5.4.42"
990     FriendlyName="givenName">
991     <saml:AttributeValue xsi:type="xs:string">
992       Tom
993     </saml:AttributeValue>
994   </saml:Attribute>
995   <saml:Attribute
996     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
997     x500:Encoding="LDAP"
998     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
999     Name="urn:oid:2.5.4.4"
1000     FriendlyName="sn">
1001     <saml:AttributeValue xsi:type="xs:string">
1002       Scavo
1003     </saml:AttributeValue>
1004   </saml:Attribute>
1005   <saml:Attribute
1006     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
1007     x500:Encoding="LDAP"
1008     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
1009     Name="urn:oid:1.3.6.1.4.1.1466.115.121.1.26"
1010     FriendlyName="mail">
1011     <saml:AttributeValue xsi:type="xs:string">
1012       trscavo@gmail.com
1013     </saml:AttributeValue>
1014   </saml:Attribute>
1015 </saml:AttributeStatement>
1016 </saml:Assertion>

```

1017 The attributes in the above example (eduPersonPrincipalName, givenName, sn, and mail) conform
1018 to the MACE-Dir Attribute Profile for SAML 2.0 [MACEAttrib] and are for illustration purposes only.

1019 4.6 Use of Metadata

1020 As outlined in section 3.8, the use of SAML V2.0 metadata [SAMLMeta] is RECOMMENDED, but since a
1021 principal is not expected to publish metadata about itself, only the use of identity provider metadata is
1022 profiled below. Note, however, that the principal may wield a client that relies on service provider metadata
1023 (see, e.g., section 4.8.1), in which case the rules in section 3.8.2 apply as well.

1024 4.6.1 Identity Provider Metadata

1025 An identity provider that uses SAML V2.0 metadata MUST include an
1026 <md:AttributeAuthorityDescriptor> element that satisfies the rules given in section 3.8.1, except
1027 that in this case the identity provider uses XML attribute supportsX509SelfQuery instead of
1028 supportsX509Query [X509Query-XSD]:

```
1029 <xs:attribute
```

1030 `name="supportsX509SelfQuery" type="boolean" use="optional"/>`

1031 As before, use of this attribute is OPTIONAL.

1032 An example of identity provider metadata follows:

```
1033 <!-- An Identity Provider supporting both deployment profiles -->
1034 <md:EntityDescriptor
1035   xmlns:md="urn:oasis:names:tc:SAML:2.0:metadata"
1036   entityID="https://idp.example.org/saml">
1037
1038   <md:AttributeAuthorityDescriptor
1039     protocolSupportEnumeration="urn:oasis:names:tc:SAML:2.0:protocol">
1040
1041     <md:AttributeService
1042       x509qry:supportsX509Query="true"
1043       x509qry:supportsX509SelfQuery="true"
1044       xmlns:x509qry="urn:oasis:names:tc:SAML:metadata:X509:query"
1045       Binding="urn:oasis:names:tc:SAML:2.0:bindings:SOAP"
1046       Location="https://idp.example.org:8443/saml-idp/AA"/>
1047
1048     <md:NameIDFormat>
1049       urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName
1050     </md:NameIDFormat>
1051
1052     <!-- see [MACEAttr] -->
1053     <md:AttributeProfile>
1054       urn:mace:dir:profiles:attribute:samlv2
1055     </md:AttributeProfile>
1056
1057   </md:AttributeAuthorityDescriptor>
1058
1059 </md:EntityDescriptor>
```

1060 Note that this identity provider supports both X.509 attribute query deployment profiles at the same
1061 endpoint location.

1062 4.7 Security and Privacy Considerations

1063 Except for section 3.9.2, the security and privacy considerations outlined in section 3.9 apply equally as
1064 well in the case of self-query. As a further privacy measure, a principal may limit the self-query to non-
1065 identity attributes (such as givenName) and push the resulting assertion to the service provider who
1066 subsequently queries the identity provider for additional attributes (according to the deployment profile in
1067 section 3). In this way, a service provider receives only those attributes that are actually required for
1068 access.

1069 4.8 Implementation Guidelines (non-normative)

1070 In addition to the guidelines outlined in section 3.10, the following non-normative guidelines are provided
1071 for the convenience of implementers.

1072 4.8.1 Discovery

1073 In the SAML Attribute Query Deployment Profile for X.509 Subjects (section 3), we encounter the problem
1074 of identity provider discovery (section 3.10.1). In the case where the principal self-queries for attributes, we
1075 encounter a different problem, which we call *service provider discovery*. In both cases, we assume the
1076 client knows the principal's preferred identity provider, so identity provider discovery is a non-issue in the
1077 case of self-queries, but in that case the client is faced with a self-query for unknown attributes.

1078 If the client had access to the published metadata of potential service providers, and that metadata
1079 included the attribute requirements of the service providers, the client would be able to formulate specific
1080 attribute queries targeted for specific service providers.

1081 This deployment profile does not specify a particular method of service provider discovery.

1082 **5 Acknowledgments**
