### Technical Committee:

OASIS Security Services TC

### Chair(s):

Hal Lockhart, BEA Systems, Inc.

Brian Campbell, Ping Identity Corporation

### Editor(s):

Tom Scavo, National Center for Supercomputing Applications (NCSA)

### Related Work:

This specification is an alternative to the *SAML V2.0 Attribute Sharing Profile for X.509 Authentication-Based Systems* [SAMLASP].

### Declared XML Namespace(s):

urn:oasis:names:tc:SAML:metadata:X509:query

37 **Abstract:**

38 This related set of SAML V2.0 deployment profiles specifies how a principal who has been issued  
39 an X.509 identity certificate is represented as a SAML Subject, how an assertion regarding such a  
40 principal is produced and consumed, and finally how two entities exchange attributes about such  
41 a principal.

42 **Status:**

43 This document was last revised or approved by the SSTC on the above date. The level of  
44 approval is also listed above. Check the current location noted above for possible later revisions  
45 of this document. This document is updated periodically on no particular schedule.

46 TC members should send comments on this specification to the TC's email list. Others  
47 should send comments to the TC by using the "Send A Comment" button on the TC's  
48 web page at <http://www.oasis-open.org/committees/security>.

49 For information on whether any patents have been disclosed that may be essential to  
50 implementing this specification, and any offers of patent licensing terms, please refer to the IPR  
51 section of the TC web page (<http://www.oasis-open.org/committees/security/ipr.php>).

52 The non-normative errata page for this specification is located at [http://www.oasis-](http://www.oasis-open.org/committees/security)  
53 [open.org/committees/security](http://www.oasis-open.org/committees/security).

55 Copyright © OASIS Open 2007-2008. All Rights Reserved.

56 All capitalized terms in the following text have the meanings assigned to them in the OASIS Intellectual  
57 Property Rights Policy (the "OASIS IPR Policy"). The full Policy may be found at the OASIS website.

57 This document and translations of it may be copied and furnished to others, and derivative works that  
58 comment on or otherwise explain it or assist in its implementation may be prepared, copied, published,  
59 and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice  
60 and this section are included on all such copies and derivative works. However, this document itself may  
61 not be modified in any way, including by removing the copyright notice or references to OASIS, except as  
62 needed for the purpose of developing any document or deliverable produced by an OASIS Technical  
63 Committee (in which case the rules applicable to copyrights, as set forth in the OASIS IPR Policy, must be  
64 followed) or as required to translate it into languages other than English.

58 The limited permissions granted above are perpetual and will not be revoked by OASIS or its successors  
59 or assigns.

59 This document and the information contained herein is provided on an "AS IS" basis and OASIS  
60 DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY  
61 WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY  
62 OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A  
63 PARTICULAR PURPOSE.

60 OASIS requests that any OASIS Party or any other party that believes it has patent claims that would  
61 necessarily be infringed by implementations of this OASIS Committee Specification or OASIS Standard, to  
62 notify OASIS TC Administrator and provide an indication of its willingness to grant patent licenses to such  
63 patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced  
64 this specification.

61 OASIS invites any party to contact the OASIS TC Administrator if it is aware of a claim of ownership of any  
62 patent claims that would necessarily be infringed by implementations of this specification by a patent  
63 holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR  
64 Mode of the OASIS Technical Committee that produced this specification. OASIS may include such  
65 claims on its website, but disclaims any obligation to do so.

62 OASIS takes no position regarding the validity or scope of any intellectual property or other rights that  
63 might be claimed to pertain to the implementation or use of the technology described in this document or  
64 the extent to which any license under such rights might or might not be available; neither does it represent  
65 that it has made any effort to identify any such rights. Information on OASIS' procedures with respect to  
66 rights in any document or deliverable produced by an OASIS Technical Committee can be found on the  
67 OASIS website. Copies of claims of rights made available for publication and any assurances of licenses  
68 to be made available, or the result of an attempt made to obtain a general license or permission for the  
69 use of such proprietary rights by implementers or users of this OASIS Committee Specification or OASIS  
70 Standard, can be obtained from the OASIS TC Administrator. OASIS makes no representation that any  
71 information or list of intellectual property rights will at any time be complete, or that any claims in such list  
72 are, in fact, Essential Claims.

63 The name "OASIS" is a trademark of OASIS, the owner and developer of this specification, and should be  
64 used only to refer to the organization and its official outputs. OASIS welcomes reference to, and  
65 implementation and use of, specifications, while reserving the right to enforce its marks against  
66 misleading uses. Please see <http://www.oasis-open.org/who/trademark.php> for above guidance.

# 1 Introduction

This related set of *SAML V2.0 Deployment Profiles for X.509 Subjects* describes how a principal who has been issued an X.509 identity certificate is represented as a SAML Subject, how an assertion regarding such a principal is produced and consumed, and finally how two entities exchange attributes about such a principal.

## 1.1 Terminology

This specification uses normative text to describe the use of SAML assertions and attribute queries for X.509 subjects.

The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this specification are to be interpreted as described in [RFC 2119]:

...they MUST only be used where it is actually required for interoperation or to limit behavior which has potential for causing harm (e.g., limiting retransmissions)...

These keywords are thus capitalized when used to unambiguously specify requirements over protocol and application features and behavior that affect the interoperability and security of implementations. When these words are not capitalized, they are meant in their natural-language sense.

Listings of XML schemas appear like this.

Example code listings appear like this.

Conventional XML namespace prefixes are used throughout the listings in this specification to stand for their respective namespaces as follows, whether or not a namespace declaration is present in the example:

<b>Prefix</b>	<b>XML Namespace</b>	<b>Comments</b>
saml:	urn:oasis:names:tc:SAML:2.0:assertion	This is the SAML V2.0 assertion namespace [SAMLCore]. This is the default namespace used throughout this document.
samlp:	urn:oasis:names:tc:SAML:2.0:protocol	This is the SAML V2.0 protocol namespace [SAMLCore].
md:	urn:oasis:names:tc:SAML:2.0:metadata	This is the SAML V2.0 metadata namespace [SAMLMeta].
query:	urn:oasis:names:tc:SAML:metadata:ext:query	This is the SAML metadata query extension namespace [SAMLMeta-Ext].
x509qry:	urn:oasis:names:tc:SAML:metadata:X509:query	This is the SAML X.509 query namespace defined by this document and its accompanying schema [X509Query-XSD].
ds:	http://www.w3.org/2000/09/xmldsig#	This is the W3C XML Signature namespace, defined in the XML-Signature Syntax and Processing specification and schema [XMLSig-XSD].
xenc:	http://www.w3.org/2001/04/xmlenc#	This is the W3C XML Encryption namespace, defined in the XML Encryption Syntax and Processing specification [XMLEnc] and schema [XMLEnc-XSD].
xs:	http://www.w3.org/2001/XMLSchema	This is the XML Schema namespace [Schema1].

Prefix	XML Namespace	Comments
xsi:	http://www.w3.org/2001/XMLSchema-instance	This is the XML Schema namespace for schema-related markup that appears in XML instances [Schema1].

133 This specification uses the following typographical conventions in text: <UnqualifiedElement>,  
 134 <ns:QualifiedElement>, Attribute, **Datatype**, OtherKeyword.

134 The term *identity provider* as used in this specification refers to a typical SAML attribute authority  
 135 [SAMLGloss]. The term *service provider* refers to a SAML attribute requester. However, as used in this  
 136 specification, a service provider is not a typical SAML service provider since it performs X.509  
 137 authentication in lieu of consuming a SAML authentication assertion.

135 The term *X.509 identity certificate* as used in this specification refers to an X.509 end entity certificate  
 136 [RFC3280] or a certificate based on an X.509 end entity certificate (such as an X.509 proxy certificate  
 137 [RFC3820]).

## 136 1.2 Outline

137 Section 2 describes how a principal who has been issued an X.509 identity certificate is represented as a  
 138 SAML Subject. Section 3 describes in detail how a service provider and identity provider exchange  
 139 attributes about a principal who has been issued an X.509 identity certificate. Section 4 describes the  
 140 special case where the requester is the subject of the query, that is, where the principal self-queries for  
 141 attributes. Finally, section 5 specifies requirements that all conforming implementations must follow.

## 2 X.509 SAML Subject Profile

The X.509 SAML Subject Profile describes how a principal who has been issued an X.509 identity certificate is represented as a SAML V2.0 Subject.

### 2.1 Required Information

**Identification:**

urn:oasis:names:tc:SAML:2.0:profiles:query:attribute:X509-subject

**Contact information:** [security-services-comment@lists.oasis-open.org](mailto:security-services-comment@lists.oasis-open.org)

**Description:** Given below.

**Updates:** N/A

**Extends:** N/A

### 2.2 Profile Description

This deployment profile specifies a SAML V2.0 `<saml:Subject>` element that represents a principal who has been issued an X.509 identity certificate. An entity that produces a `<saml:Subject>` element according to this deployment profile MUST have previously determined that the principal does in fact possess the corresponding private key.

### 2.3 `<saml:Subject>` Usage

The `<saml:Subject>` element MUST contain exactly one of `<saml:NameID>` or `<saml:EncryptedID>`. The `<saml:Subject>` element MAY contain one or more `<saml:SubjectConfirmation>` elements that are out of scope for this deployment profile.

#### 2.3.1 `<saml:NameID>` Usage

If the `<saml:Subject>` element contains a `<saml:NameID>` element, the following requirements MUST be satisfied:

- The value of the `<saml:NameID>` element is the Subject Distinguished Name (DN) from the principal's X.509 identity certificate.
- The `<saml:NameID>` element MUST have a `Format` attribute whose value is `urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName`. Thus the DN value of the `<saml:NameID>` element MUST satisfy the rules of section 8.3.3 of [SAMLCore]. Moreover, for the purposes of this deployment profile, the DN value MUST conform to RFC 2253 [RFC2253].
- As specified in [SAMLCore], the `NameQualifier` attribute of the `<saml:NameID>` element SHOULD be omitted.

#### 2.3.2 `<saml:EncryptedID>` Usage

If the `<saml:Subject>` element contains a `<saml:EncryptedID>` element, the content of the enclosed `<xenc:EncryptedData>` element MUST be an encrypted `<saml:NameID>` element that satisfies the requirements of the previous section.

To encrypt the `<saml:NameID>` element, exactly one of the following procedures MUST be followed:

- The producer generates a new symmetric key to encrypt the `<saml:NameID>` element. After

204 performing the encryption, the producer places the resulting ciphertext in the  
205 <xenc:EncryptedData> element. The symmetric key MUST be encrypted with the consumer's  
206 public key and the resulting ciphertext MUST be placed in the <xenc:EncryptedKey> element.

- 205 • The producer uses a symmetric key previously established with the consumer to encrypt the  
206 <saml:NameID> element. After performing the encryption, the producer places the resulting  
207 ciphertext in the <xenc:EncryptedData> element. In this case, however, the  
208 <saml:EncryptedID> element MUST NOT contain an <xenc:EncryptedKey> element.

206 A symmetric key transmitted in an <xenc:EncryptedKey> element MUST NOT be later reused by the  
207 producer as a previously established symmetric key.

## 207 2.4 Example

208 An example of an unencrypted X.509 SAML Subject:

```
209 <!-- unencrypted X.509 SAML Subject -->  
210 <saml:Subject>  
211   <saml:NameID  
212     Format="urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName">  
213     CN=trscavo@uiuc.edu,OU=User,O=NCSA-TEST,C=US  
214   </saml:NameID>  
215 </saml:Subject>
```

216 An example of an encrypted X.509 SAML Subject:

```
217 <!-- encrypted X.509 SAML Subject -->  
218 <saml:Subject>  
219   <saml:EncryptedID  
220     xmlns:xenc="http://www.w3.org/2001/04/xmlenc#">  
221     <xenc:EncryptedData  
222       Type="http://www.w3.org/2001/04/xmlenc#Element">  
223       ...  
224     </xenc:EncryptedData>  
225     <xenc:EncryptedKey  
226       Recipient="https://idp.example.org/saml">  
227       ...

230 </saml:Subject>
```

## 231 3 SAML Attribute Query Deployment Profile for X.509 232 Subjects

232 The *SAML Attribute Query Deployment Profile for X.509 Subjects* specifies how a service provider and an  
233 identity provider exchange attributes about a principal who has been issued an X.509 identity certificate.  
234 As such, the profile relies on the X.509 SAML Subject Profile specified in section 2 of this document. Note  
235 that the deployment profile specified in section 4 is an extension of this profile.

### 233 3.1 Profile Overview (non-normative)

234 Consider the use case where a principal attempts to access a secured resource at a service provider.  
235 Principal authentication at the service provider is accomplished by presenting a trusted X.509 identity  
236 certificate and by demonstrating proof of possession of the associated private key.

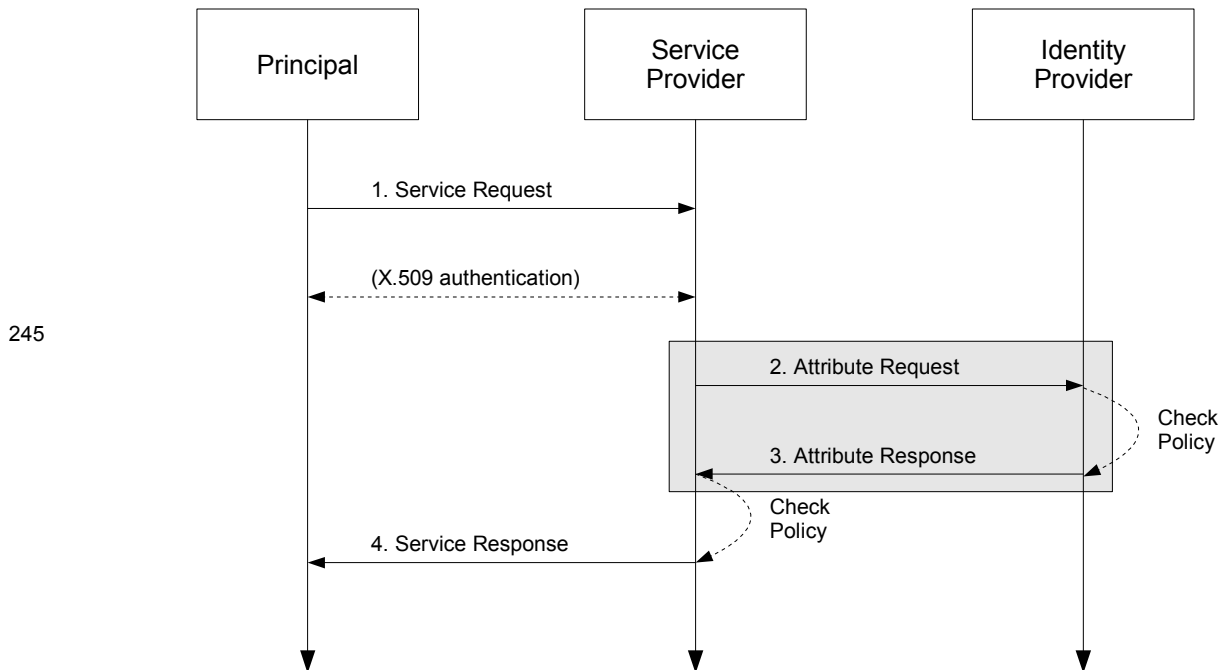

235 After the principal has been authenticated, the service provider requires additional information about the  
236 principal in order to determine whether to grant access to the resource. To obtain this information, the  
237 service provider uses the Subject Distinguished Name (DN) field (and perhaps other information) from the  
238 principal's X.509 identity certificate to query an identity provider for attributes about the principal. Using the  
239 attributes received from the identity provider, the service provider is able to make an informed access  
240 control decision.

236 This use case is based upon the following assumptions:

- 237 • A principal possesses an X.509 identity credential.
- 238 • The principal wields a client that requests a service from a service provider.
- 239 • The client can access the principal's X.509 identity credential.
- 240 • The principal has an account with a SAML identity provider.
- 241 • The service provider knows the principal's preferred identity provider and is able to query that  
242 identity provider for attributes.
- 242 • The identity provider is able to map an X.509 SAML Subject (as defined in section 2 of this  
243 document) to one and only one principal in its security domain. In particular, the identity provider is  
244 able to map the X.509 SAML Subject that represents this principal.

243 The sequence of steps for the full use case is shown below.

244 **Note:** The steps constrained by this profile are highlighted with a gray box. The other  
245 steps are shown only for completeness; the profile does not constrain them.

246 **1. Service Request**

247 In step 1, the principal requests a secured resource from a service provider who requires that the  
 248 principal be authenticated. The principal authenticates to the service provider with an X.509 identity  
 249 certificate.

248 **2. Attribute Request**

249 In step 2, the service provider sends a SAML V2.0 `<samlp:AttributeQuery>` message to the  
 250 identity provider using a SAML SOAP Binding. The Subject DN from the principal's X.509 identity  
 251 certificate (presented in step 1) is used to construct the `<saml:Subject>` element.

250 **3. Attribute Response**

251 In step 3, after verifying that the service provider is a valid requester, the identity provider issues a  
 252 `<samlp:Response>` message containing appropriate attributes pertaining to the principal. The  
 253 attributes returned to the service provider are subject to policy at the identity provider.

252 **4. Service Response**

253 In step 4, based on the attributes received from the identity provider, the service provider returns the  
 254 requested resource or an error, subject to policy.

254 Of the sequence of steps described above, it is steps 2 and 3 that are profiled in sections 3.3 and 3.4 of  
 255 this deployment profile.

255 **3.2 Required Information**

256 **Identification:**

257 `urn:oasis:names:tc:SAML:2.0:profiles:query:attribute:X509`

257 **Contact information:** [security-services-comment@lists.oasis-open.org](mailto:security-services-comment@lists.oasis-open.org)

258 **Description:** Given below.

259 **Updates:** N/A

260 **Extends:** Assertion Query/Request Profile [SAMLProf]

### 261 **3.3 Profile Description**

262 This deployment profile describes the use of the SAML V2.0 Assertion Query and Request Protocol  
263 [SAMLCore] in conjunction with the SAML V2.0 SOAP Binding [SAMLBind] to retrieve the attributes of a  
264 principal who has authenticated using an X.509 identity certificate. The attribute exchange **MUST** conform  
265 to the Assertion Query/Request Profile given in section 6 of [SAMLProf] unless otherwise specified below.

263 As outlined in section 3.1, a service provider sends a SAML V2.0 `<samlp:AttributeQuery>` message  
264 directly to an identity provider. This message contains a name identifier that identifies a principal who has  
265 authenticated to the service provider using an X.509 identity certificate. If the identity provider receiving the  
266 request can:

- 264 • recognize the name identifier; and
- 265 • fulfill the request subject to any applicable policies;

266 the identity provider responds with a successful `<samlp:Response>` containing the relevant attributes for  
267 the identified principal.

#### 267 **3.3.1 `<samlp:AttributeQuery>` Issued by Service Provider**

268 To initiate the profile, the service provider uses a synchronous binding such as the SAML SOAP Binding  
269 [SAMLBind] to send a SAML V2.0 `<samlp:AttributeQuery>` message to an Attribute Service  
270 endpoint at the identity provider. SAML metadata (section 3.8) **MAY** be used to determine the endpoint  
271 locations and bindings supported by the identity provider.

269 The service provider uses information obtained from the principal's X.509 identity certificate to construct  
270 the query. As required by the X.509 SAML Subject Profile (section 2), the service provider **MUST** have  
271 previously determined that the principal does in fact possess the corresponding private key. The details of  
272 this step are out of scope for this deployment profile.

270 The service provider **MUST** authenticate itself to the identity provider. SSL 3.0 [SSL3] or TLS 1.0  
271 [RFC2246] with client authentication **MAY** be used for this purpose and to provide integrity protection and  
272 confidentiality. Also, the `<samlp:AttributeQuery>` element **MAY** be signed.

#### 271 **3.3.2 `<samlp:Response>` Issued by Identity Provider**

272 The identity provider **MUST** process the request as outlined in [SAMLCore]. After processing the message  
273 or upon encountering an error, the identity provider **MUST** return a `<samlp:Response>` message  
274 containing an appropriate status code to the service provider to complete the SAML protocol exchange. If  
275 the identity provider is successful in locating one or more attributes for this principal, they will be included  
276 in the response.

277 The identity provider **MUST** be able to map the referenced X.509 Subject to one and only one principal in  
278 its security domain. If the identity provider is not able to map the `<saml:Subject>` element to a local  
279 principal, it **MUST** return an error.

280 The identity provider processes the `<samlp:AttributeQuery>` element and any enclosed  
281 `<saml:Attribute>` elements before returning an assertion containing a  
282 `<saml:AttributeStatement>` to the requester. If no `<saml:Attribute>` elements are included in  
283 the query, the identity provider returns all attributes for this principal, subject to policy. SAML metadata  
284 (section 3.8) **MAY** be used to determine the attribute requirements of the service provider. If the identity  
285 provider is unable to resolve attributes for this principal (for any reason), it **MUST** return an error.

286 The identity provider **MUST** authenticate itself to the service provider. Also, either the  
287 `<samlp:Response>` element or the `<saml:Assertion>` element (or both) **MAY** be signed.

## 288 3.4 Use of SAML Request-Response Protocol

289 As required by the Assertion Query/Request Profile [SAMLProf], the `<samlp:AttributeQuery>`  
290 element MUST contain a `<saml:Issuer>` element.

### 290 3.4.1 `<samlp:AttributeQuery>` Usage

291 The request MUST contain a `<samlp:AttributeQuery>` element that conforms to the following rules:

- 292 • The `<saml:Subject>` element MUST conform to the X.509 SAML Subject Profile defined in  
293 section 2 of this document.
- 293 • The `<saml:Subject>` element MUST NOT contain a `<saml:SubjectConfirmation>`  
294 element.
- 294 • The `<samlp:AttributeQuery>` element MAY include one or more `<saml:Attribute>`  
295 elements.

### 295 3.4.2 `<samlp:Response>` Usage

296 If the request is successful, the `<samlp:Response>` element MUST conform to the following rules. Any  
297 assertion(s) included in the response may be encrypted or unencrypted. See section 2 of the SAML V2.0  
298 Assertions and Protocols specification [SAMLCore] for general requirements regarding SAML assertions.

297 For each `<saml:Assertion>` element the following conditions MUST be satisfied:

- 298 • The `<saml:Subject>` element (which strongly matches the subject of the query [SAMLCore])  
299 SHOULD NOT contain a `<saml:SubjectConfirmation>` element.
- 299 • The `<saml:Assertion>` element MUST contain a `<saml:Conditions>` element with  
300 `NotBefore` and `NotOnOrAfter` attributes.
- 300 • The `<saml:Assertion>` element SHOULD contain a `<saml:Audience>` element whose value  
301 is identical to the value of the `<saml:Issuer>` element in the request.
- 301 • Other conditions (including other `<saml:Audience>` elements) MAY be included as required by  
302 the service provider or at the discretion of the identity provider.
- 302 • The `<saml:Assertion>` element MUST contain at least one `<saml:AttributeStatement>`  
303 element and SHOULD contain *only* `<saml:AttributeStatement>` elements.

303 For each `<saml:EncryptedAssertion>` element, the content of the enclosed  
304 `<xenc:EncryptedData>` element MUST be an encrypted `<saml:Assertion>` element that satisfies  
305 the above requirements.

304 To encrypt the `<saml:Assertion>` element, exactly one of the following procedures MUST be followed:

- 305 • The identity provider generates a new symmetric key to encrypt the `<saml:Assertion>` element.  
306 After performing the encryption, the identity provider places the resulting ciphertext in the  
307 `<xenc:EncryptedData>` element. The symmetric key MUST be encrypted with the service  
308 provider's public key and the resulting ciphertext placed in the `<xenc:EncryptedKey>` element.
- 306 • The identity provider uses a symmetric key previously established with the service provider to  
307 encrypt the `<saml:Assertion>` element. After encrypting the `<saml:Assertion>` element  
308 using this key, the identity provider places the resulting ciphertext in the `<xenc:EncryptedData>`  
309 element. In this case, however, the `<saml:EncryptedAssertion>` element MUST NOT contain  
310 an `<xenc:EncryptedKey>` element.

307 See section 3.6 for additional rules regarding encryption.

308 If the request is unsuccessful and the identity provider wishes to return an error, the `<samlp:Response>`

309 element MUST NOT contain a <saml:Assertion> element. Possible error responses include the  
310 following:

- 310 • The identity provider MAY return one of the status codes  
311 urn:oasis:names:tc:SAML:2.0:status:UnknownAttrProfile or  
312 urn:oasis:names:tc:SAML:2.0:status:InvalidAttrNameOrValue as suggested in  
313 section 3.3.2.3 of [SAMLCore].
- 311 • If the identity provider does not recognize the <saml:NameID> element or otherwise is unable to  
312 map the <saml:NameID> element to a local principal name, it MAY return the following status  
313 code:  
314 urn:oasis:names:tc:SAML:2.0:status:UnknownPrincipal

## 312 3.5 Example

313 For example, the requester issues the following attribute query:

```
314 <samlp:AttributeQuery
315   xmlns:saml="urn:oasis:names:tc:SAML:2.0:assertion"
316   xmlns:samlp="urn:oasis:names:tc:SAML:2.0:protocol"
317   ID="aaf23196-1773-2113-474a-fe114412ab72"
318   Version="2.0"
319   IssueInstant="2006-07-17T22:26:40Z">
320   <saml:Issuer>https://sp.example.org/saml</saml:Issuer>
321   <saml:Subject>
322     <saml:NameID
323       Format="urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName">
324       CN=trscavo@uiuc.edu,OU=User,O=NCSA-TEST,C=US
325     </saml:NameID>
326   </saml:Subject>
327   <saml:Attribute
328     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
329     x500:Encoding="LDAP"
330     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
331     Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.6"
332     FriendlyName="eduPersonPrincipalName">
333   </saml:Attribute>
334   <saml:Attribute
335     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
336     x500:Encoding="LDAP"
337     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
338     Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.1"
339     FriendlyName="eduPersonAffiliation">
340   </saml:Attribute>
341 </samlp:AttributeQuery>
```

338 After processing the request, the identity provider issues the following response:

```
339 <samlp:Response
340   xmlns:saml="urn:oasis:names:tc:SAML:2.0:assertion"
341   xmlns:samlp="urn:oasis:names:tc:SAML:2.0:protocol"
342   InResponseTo="aaf23196-1773-2113-474a-fe114412ab72"
343   ID="b07b804c-7c29-ea16-7300-4f3d6f7928ac"
344   Version="2.0"
345   IssueInstant="2006-07-17T22:26:41Z">
346   <saml:Issuer>https://idp.example.org/saml</saml:Issuer>
347   <samlp:Status>
348     <samlp:StatusCode
349       Value="urn:oasis:names:tc:SAML:2.0:status:Success"/>
350   </samlp:Status>
351   <saml:Assertion
352     xmlns:saml="urn:oasis:names:tc:SAML:2.0:assertion"
353     xmlns:xs="http://www.w3.org/2001/XMLSchema"

377         x500:Encoding="LDAP"
378         NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
379         Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.6"
380         FriendlyName="eduPersonPrincipalName">
381         <saml:AttributeValue xsi:type="xs:string">
382           trscavo@uiuc.edu
383         </saml:AttributeValue>
384       </saml:Attribute>
385       <saml:Attribute
386         xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:x500"
387         x500:Encoding="LDAP"
388         NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
389         Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.1"
390         FriendlyName="eduPersonAffiliation">
391         <saml:AttributeValue xsi:type="xs:string">
392           member
393         </saml:AttributeValue>
394         <saml:AttributeValue xsi:type="xs:string">
395           staff
396         </saml:AttributeValue>
397       </saml:Attribute>
398     </saml:AttributeStatement>
399   </saml:Assertion>
400 </samlp:Response>

```

401 The attributes in the above example (`eduPersonAffiliation` and `eduPersonPrincipalName`)
402 conform to the MACE-Dir Attribute Profile for SAML 2.0 [MACEAttrib] and are for illustration purposes
403 only.

### 399 3.6 Use of Encryption

404 If the service provider encrypts the `<saml:NameID>` element in the query, the identity provider SHOULD
405 encrypt any resulting assertions. Moreover, if the service provider uses a previously established symmetric
406 key, the identity provider SHOULD use the same symmetric key to encrypt the assertion. In the case
407 where the service provider generates a new symmetric key, the identity provider MUST treat this key as a
408 previously established key, that is, the identity provider SHOULD use the same symmetric key to encrypt
409 the assertion and MUST NOT encrypt this key into the `<xenc:EncryptedKey>` element.

410 An encryption algorithm satisfying FIPS 140-2 Security Requirements [FIPS 140-2] SHALL be used for all
411 encryption operations.

## 408 3.7 Use of Digital Signatures

409 If the service provider encrypts the `<saml:NameID>` element in the query, the  
410 `<samlp:AttributeQuery>` element MUST be signed *after* the encryption operation takes place. If the  
411 identity provider encrypts a `<saml:Assertion>` element in the response, the `<saml:Assertion>`  
412 element MUST be signed *before* the encryption operation takes place. Whether or not an assertion is  
413 encrypted, the `<saml:Response>` element MAY be signed.

410 A signing algorithm satisfying FIPS 140-2 Security Requirements [FIPS 140-2] SHALL be used for all  
411 digital signature operations on encrypted elements or elements with encrypted content.

## 411 3.8 Use of Metadata

412 The identity provider and the service provider MAY use metadata for locating endpoints, communicating  
413 key information, and so forth. The use of SAML V2.0 metadata [SAMLMeta], which is RECOMMENDED,  
414 is profiled in sections 3.8.1 and 3.8.2 below.

### 413 3.8.1 Identity Provider Metadata

414 An identity provider that uses SAML V2.0 metadata MUST include an  
415 `<md:AttributeAuthorityDescriptor>` element that satisfies the following rules:

- 415 • The containing `<md:EntityDescriptor>` element MUST have an `entityID` attribute whose  
416 value is the same unique identifier given as the `<saml:Issuer>` element in assertions issued by  
417 the identity provider.
- 416 • The `<md:AttributeAuthorityDescriptor>` element MUST include an  
417 `<md:NameIDFormat>` element with value `"urn:oasis:names:tc:SAML:1.1:nameid-`  
418 `format:X509SubjectName"`.
- 417 • One or more `<saml:Attribute>` elements MAY be included in the  
418 `<md:AttributeAuthorityDescriptor>` element. Since a service provider may choose not to  
419 query the identity provider based on the attributes in this list, this list SHOULD be comprehensive or  
420 otherwise omitted.

418 To distinguish between this deployment profile and other uses of `X509SubjectName`, an identity provider  
419 requires the means to explicitly call out its support of this deployment profile. An XML attribute has been  
420 specified for this purpose [X509Query-XSD]:

```
419 <xs:attribute  
420 name="supportsX509Query" type="boolean" use="optional"/>
```

421 Use of this attribute is OPTIONAL. An identity provider that chooses to use this attribute, however, MUST  
422 do so as follows:

- 422 • The `<md:AttributeAuthorityDescriptor>` element MUST include at least one  
423 `<md:AttributeService>` element having attribute `supportsX509Query` set to `"true"`.
- 423 • At least one `<md:AttributeService>` element having attribute `supportsX509Query` set to  
424 `"true"` MUST have its `Binding` attribute set to  
425 `"urn:oasis:names:tc:SAML:2.0:bindings:SOAP"`.

424 An example of identity provider metadata follows:

```
425 <!-- An Identity Provider supporting this deployment profile -->  
426 <md:EntityDescriptor  
427 xmlns:md="urn:oasis:names:tc:SAML:2.0:metadata"  
428 entityID="https://idp.example.org/saml">  
429  
430 <md:AttributeAuthorityDescriptor  
431 protocolSupportEnumeration="urn:oasis:names:tc:SAML:2.0:protocol">  
432
```

```

433     <md:AttributeService
434         x509qry:supportsX509Query="true"
435         xmlns:x509qry="urn:oasis:names:tc:SAML:metadata:X509:query"
436         Binding="urn:oasis:names:tc:SAML:2.0:bindings:SOAP"
437         Location="https://idp.example.org:8443/saml-idp/AA"/>
438
439     <md:NameIDFormat>
440         urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName
441     </md:NameIDFormat>
442
443     <!-- see [MACEAttr] -->
444     <md:AttributeProfile>
445         urn:mace:dir:profiles:attribute:samlv2
446     </md:AttributeProfile>
447
448 </md:AttributeAuthorityDescriptor>
449
450 </md:EntityDescriptor>

```

### 451 3.8.2 Service Provider Metadata

452 A service provider that uses SAML V2.0 metadata **MUST** include an `<md:RoleDescriptor>` element  
453 that satisfies the following rules:

- 453 • The containing `<md:EntityDescriptor>` element **MUST** have an `entityID` attribute whose  
454 value is the same unique identifier used as the `<saml:Issuer>` element in attribute queries  
455 issued by the service provider.
- 454 • The type of the `<md:RoleDescriptor>` element **MUST** be derived from type  
455 **query:AttributeQueryDescriptorType** [SAMLMeta-Ext].
- 455 • The `<md:RoleDescriptor>` element **MUST** include an `<md:NameIDFormat>` element with  
456 value "urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName".
- 456 • One or more `<md:RequestedAttribute>` elements **MAY** be included in the  
457 `<md:AttributeConsumingService>` element.

457 An example of service provider metadata follows:

```

458 <!-- A Service Provider supporting this profile -->
459 <md:EntityDescriptor
460     xmlns:md="urn:oasis:names:tc:SAML:2.0:metadata"
461     entityID="https://sp.example.org/saml">
462
463     <md:RoleDescriptor
464         xmlns:query="urn:oasis:names:tc:SAML:metadata:ext:query"
465         xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
466         xsi:type="query:AttributeQueryDescriptorType"
467         protocolSupportEnumeration="urn:oasis:names:tc:SAML:2.0:protocol">
468
469         <md:NameIDFormat>
470             urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName
471         </md:NameIDFormat>
472
473         <md:AttributeConsumingService isDefault="true" index="0">
474             <md:ServiceName xml:lang="en">
475                 Grid Service Provider
476             </md:ServiceName>
477             <md:RequestedAttribute
478                 NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
479                 Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.6"
480                 FriendlyName="eduPersonPrincipalName">
481             </md:RequestedAttribute>
482             <md:RequestedAttribute
483                 NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
484                 Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.1"

```

```
485         FriendlyName="eduPersonAffiliation">
486         </md:RequestedAttribute>
487     </md:AttributeConsumingService>
488
489     </md:RoleDescriptor>
490
491 </md:EntityDescriptor>
```

492 The attributes in the above example (`eduPersonAffiliation` and `eduPersonPrincipalName`)  
493 conform to the MACE-Dir Attribute Profile for SAML 2.0 [MACEAttrib] and are for illustration purposes  
494 only.

## 495 **3.9 Security and Privacy Considerations**

496 The motivation for this deployment profile is to specify a secure means of obtaining SAML attributes in  
497 conjunction with X.509 authentication.

### 497 **3.9.1 Background**

498 The SAML Security and Privacy specification [SAMLSecure] provides general background material  
499 relevant to all SAML bindings and profiles. Section 6.1 of [SAMLSecure], in particular, considers the  
500 security requirements of the SAML SOAP Binding, and is therefore pertinent to this deployment profile. In  
501 addition, section 3.1.2 of the SAML Bindings specification [SAMLBind] provides further security guidelines  
502 regarding SAML bindings.

### 499 **3.9.2 General Security Requirements**

500 SAML profiles often involve a system entity that relies on an earlier act of user authentication. For  
501 example, the SAML Web Browser SSO Profile [SAMLProf] relies on an authentication service that  
502 validates a credential (typically a username/password) for a user. The authentication service must be  
503 securely linked to an identity provider that issues SAML authentication assertions based on that user's act  
504 of authentication. Similarly, this deployment profile assumes that the system entity that performs the  
505 X.509 authentication is operating in a secure environment that includes the attribute requester.

506 In this deployment profile, an end user presents an X.509 identity certificate to authenticate at the service  
507 provider. The system entity that performs this authentication (i.e., validates the certificate and its trust  
508 chain) must be securely linked to the SAML attribute requester that subsequently initiates this deployment  
509 profile. The latter must have a secure means of obtaining the X.509 subject name (and other information)  
510 from the certificate and issuing a SAML V2.0 `<samlp:AttributeQuery>` for that subject to the  
511 appropriate asserting party. The mechanism by which these system entities are linked is out of scope for  
512 this deployment profile.

513 Local policy settings at the attribute authority will determine whether or not the asserting party is permitted  
514 to return attributes for the requested subject.

### 514 **3.9.3 User Privacy**

515 Since a DN persists for the life of the certificate, a service provider may query for attributes at any time.  
516 To prevent service providers from querying for attributes after the certificate has expired, an identity  
517 provider SHOULD check the lifetime of the referenced certificate before issuing an assertion regarding an  
518 X.509 Subject. If the certificate has expired, an error should be returned.

516 As a further privacy measure, the principal may use a short-lived X.509 identity certificate. For example,  
517 an X.509 proxy certificate [RFC3820]) may be used.

## 517 **3.10 Implementation Guidelines (non-normative)**

518 The following non-normative guidelines are provided for the convenience of implementers.

### 519 **3.10.1 Discovery**

520 The service provider must determine the principal's preferred identity provider. This is called *identity*  
521 *provider discovery*.

522 Some possible approaches to identity provider discovery in the context of this deployment profile are  
523 discussed briefly below:

- 523 • The identity provider's unique identifier may be preconfigured at the service provider. This is useful,  
524 for instance, if there is only one identity provider per deployment.
- 525 • The subject DN of the principal's X.509 identity certificate may include a reference to the identity  
526 provider. New deployments are discouraged from decorating long-lived DNs in this manner,  
527 however, since this practice may lessen interoperability with existing PKIs. For short-lived X.509  
528 identity certificates, this practice may be satisfactory.
- 529 • The issuer DN or the issuer alternative name may provide clues about the principal's preferred  
530 identity provider. This technique may not be practical, however, since SAML authorities do not  
531 typically issue X.509 credentials.
- 532 • A reference to the identity provider may be inserted into a non-critical X.509 extension [RFC3280] at  
533 the time the credential is issued. For long-term credentials, this practice may not be feasible, but  
534 for short-term credentials, this technique may be satisfactory.

533 This deployment profile does not specify a particular method of identity provider discovery.

### 534 **3.10.2 Name Mapping**

535 An identity provider that consumes a `<saml:Subject>` element produced according to this deployment  
536 profile must be able to map the referenced X.509 Subject to one and only one principal in its security  
537 domain. If the identity provider issued the X.509 credential in the first place, or otherwise has access to  
538 the principal's X.509 identity certificate, this should be straightforward. Otherwise a persistent certificate  
539 registration process to facilitate the mapping of X.509 Subjects to principals may be used.

### 540 **3.10.3 Canonicalization**

541 According to this deployment profile, the format of the DNs used to construct the `<saml:Subject>`  
542 element is dictated by [SAMLCore]. Since the latter allows some flexibility in the precise format of a DN  
543 (by virtue of its dependence on [RFC2253]), it may be necessary for an identity provider to canonicalize  
544 the DN during the course of mapping it to a local principal name. Note that the details of the  
545 canonicalization process are of concern only to the identity provider. As long as the service provider  
546 provides a DN whose canonicalization is recognized by the identity provider, the correct mapping will  
547 occur.

### 548 **3.10.4 Identity Provider Policy**

549 Service providers may explicitly enumerate the required attributes in queries or may issue so-called  
550 "empty queries" that essentially request all available attributes. Regardless of the attribute requirements  
551 called out in the query (or in metadata, if used for this purpose), it is the identity provider that determines  
552 the actual attributes returned to the service provider. Thus a responsible identity provider will initiate and  
553 enforce policy that strictly limits the attributes released to service providers.

554 **3.10.5 Caching of Attributes**

555 A service provider will most likely provide a capability to cache user attributes returned in assertions. If so,  
556 cache expiration settings should be configurable by administrators.

## 556 4 SAML Attribute Self-Query Deployment Profile for 557 X.509 Subjects

557 The *SAML Attribute Self-Query Deployment Profile for X.509 Subjects* specifies how a principal who has  
558 been issued an X.509 identity certificate self-queries an identity provider for attributes. The profile extends  
559 the SAML Attribute Query Deployment Profile for X.509 Subjects specified in section 3 of this document.  
560 Where the two profiles conflict, this deployment profile takes precedence.

### 558 4.1 Profile Overview (non-normative)

559 In this scenario, a principal self-queries an identity provider for attributes. The principal uses the Subject  
560 Distinguished Name (DN) field (and perhaps other information) from its X.509 identity certificate to  
561 formulate the query. Principal authentication is accomplished by presenting a trusted X.509 identity  
562 certificate (the same certificate used to construct the query) and by demonstrating proof of possession of  
563 the associated private key. After the principal has been authenticated, the identity provider binds the  
564 principal's public key to an assertion, which is issued directly to the principal.

565 The principal subsequently requests a secured resource at the service provider. The principal presents  
566 the previously obtained assertion to the service provider and demonstrates proof of possession of the  
567 corresponding private key. Using the attributes in the assertion, the service provider is able to make an  
568 informed access control decision.

566 This use case is based on the following assumptions:

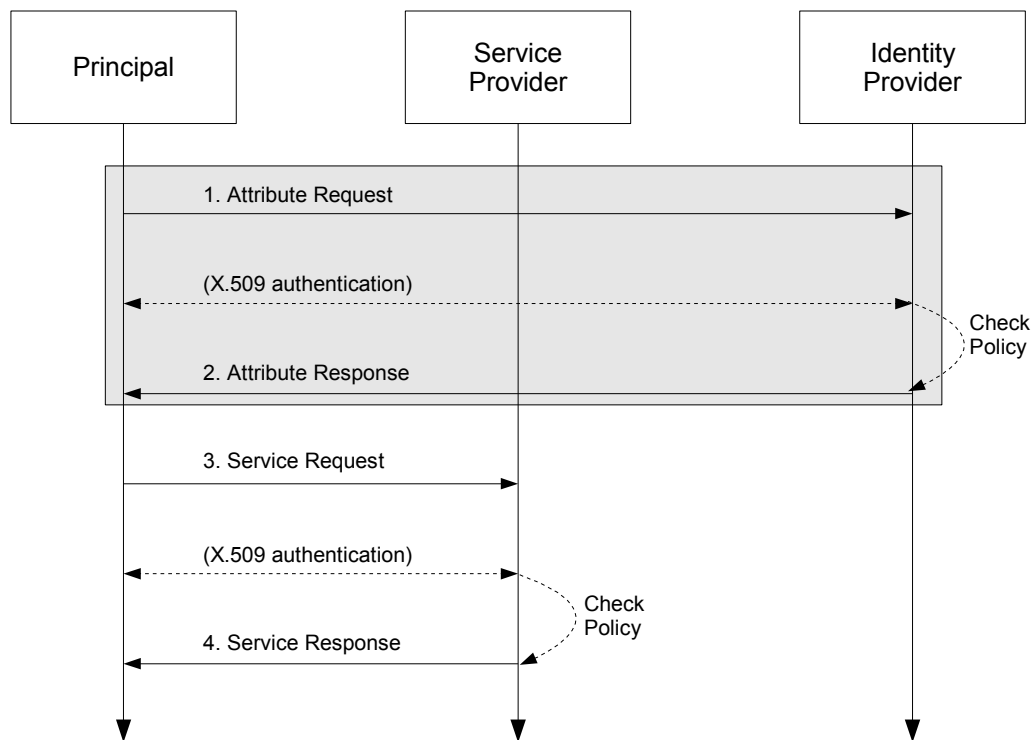

- 567 • A principal possesses an X.509 credential.
- 568 • The principal wields a client that can both query an identity provider for attributes and request a  
569 service from a service provider.
- 569 • The client can access the principal's X.509 credential.
- 570 • The principal has an account with a SAML identity provider.
- 571 • The client knows the principal's preferred identity provider and the attribute requirements of the  
572 target service provider.
- 573 • The identity provider is able to map an X.509 SAML Subject (as defined in section 2 of this  
574 document) to one and only one principal in its security domain. In particular, the identity provider is  
575 able to map the X.509 SAML Subject that represents this principal.

574 Note that in the case of a self-query, the client possesses significantly more functionality than the client  
575 alluded to in section 3.1.

575 The sequence of steps for the full use case is shown below.

576 **Note:** The steps constrained by this profile are highlighted with a gray box. The other  
577 steps are shown only for completeness; the profile does not constrain them.

577

578 **1. Attribute Request**

579 In step 1, the principal sends a SAML V2.0 `<samlp:AttributeQuery>` message to the identity  
 580 provider using a SAML SOAP Binding. The Subject DN from the principal's X.509 identity certificate is  
 581 used to construct the `<saml:Subject>` element of the query. The identity provider requires that the  
 582 principal be authenticated. The principal authenticates to the identity provider using the same X.509  
 583 credential used to construct the query.

584 **2. Attribute Response**

585 In step 2, after verifying that the principal is a valid requester, the identity provider issues a  
 586 `<samlp:Response>` message containing appropriate attributes. The attributes returned to the  
 587 principal are subject to policy at the identity provider.

588 **3. Service Request**

589 In step 3, the principal requests a secured resource at the service provider. The principal presents the  
 590 assertion obtained at step 2 to the service provider. The service provider requires that the principal be  
 591 authenticated. The principal authenticates to the service provider using the same X.509 credential  
 592 used to authenticate to the identity provider at step 1.

593 **4. Service Response**

594 In step 4, based on the attributes in the pushed assertion, the service provider returns the requested  
 595 resource or an error, subject to policy.

596 Of the sequence of steps described above, it is steps 1 and 2 that are profiled in sections 4.3 and 4.4 of  
 597 this deployment profile.

598 **4.2 Required Information**

599 **Identification:**

600 `urn:oasis:names:tc:SAML:2.0:profiles:query:attribute:X509-self`

601 **Contact information:** [security-services-comment@lists.oasis-open.org](mailto:security-services-comment@lists.oasis-open.org)

602 **Description:** Given below.

603 **Updates:** N/A

604 **Extends:** SAML Attribute Query Deployment Profile for X.509 Subjects (section 3)

## 605 **4.3 Profile Description**

606 This deployment profile extends the SAML Attribute Query Deployment Profile for X.509 Subjects  
607 described in section 3.3.

607 As outlined in section 4.1, a principal sends a SAML V2.0 `<samlp:AttributeQuery>` message directly  
608 to an identity provider. The principal authenticates to the identity provider using an X.509 identity  
609 certificate. If the identity provider receiving the request can:

- 610 • recognize the name identifier; and
- 611 • determine that the requester is the principal; and
- 612 • fulfill the request subject to any applicable policies;

613 the identity provider responds with a successful `<samlp:Response>` containing the relevant attributes for  
614 the principal. To determine that the requester is the principal, the identity provider **MUST** authenticate the  
615 principal.

### 616 **4.3.1 `<samlp:AttributeQuery>` Issued by Principal**

617 To initiate the profile, the principal uses a synchronous binding such as the SAML SOAP Binding  
618 [SAMLBind] to send a SAML V2.0 `<samlp:AttributeQuery>` message as described in section 3.3.  
619 The principal uses information obtained from its X.509 identity certificate to construct the query. The  
620 principal **MUST** authenticate itself to the identity provider using the same X.509 credential used to  
621 construct the query. SSL 3.0 [SSL3] or TLS 1.0 [RFC2246] with client authentication **MAY** be used for this  
622 purpose and to provide integrity protection and confidentiality.

### 623 **4.3.2 `<samlp:Response>` Issued by Identity Provider**

624 The identity provider **MUST** process the request as outlined in section 3.3.

## 625 **4.4 Use of SAML Request-Response Protocol**

626 As required by the Assertion Query/Request Profile [SAMLProf], the `<samlp:AttributeQuery>`  
627 element **MUST** contain a `<saml:Issuer>` element. Since the requester is the principal, the  
628 `<saml:Issuer>` element **MUST** be identical to the `<saml:NameID>` element, that is, both **MUST** satisfy  
629 the rules of the X.509 SAML Subject Profile (section 2).

### 630 **4.4.1 `<samlp:AttributeQuery>` Usage**

631 The request **MUST** contain a `<samlp:AttributeQuery>` element that conforms to the rules of  
632 section 3.4.1.

### 633 **4.4.2 `<samlp:Response>` Usage**

634 If the request is successful, the `<samlp:Response>` element **MUST** conform to the rules of section 3.4.2  
635 except as noted below:

- 636 • The `<saml:Subject>` element **MUST** contain a `<saml:SubjectConfirmation>` element

- 637 whose Method attribute has value "urn:oasis:names:tc:SAML:2.0:cm:holder-of-key".
- 638 • A <saml:SubjectConfirmationData> element MUST be present and it MUST contain a
  - 639 <ds:KeyInfo> element that refers to the principal's X.509 identity certificate.
  - 640 • On the <saml:Conditions> element, the value of the NotBefore attribute (resp., the
  - 641 NotOnOrAfter attribute) MUST be greater than or equal to (resp., less than or equal to) the
  - 642 NotBefore field (resp., the NotOnOrAfter field) of the certificate.
  - 643 • The <saml:Assertion> element MUST be signed.
  - 644 • The <saml:Assertion> element MAY include a <saml:AuthnStatement> element.

### 645 4.4.3 Processing Rules

646 In addition to the assertion processing rules outlined in [SAMLCore], the service provider MUST verify the  
647 following:

- 647 • The <saml:SubjectConfirmationData> element MUST be present and it MUST contain a
- 648 <ds:KeyInfo> element that refers to the principal's X.509 identity certificate.
- 649 • The value of the NotBefore attribute (resp., the NotOnOrAfter attribute) MUST be greater than
- 650 or equal to (resp., less than or equal to) the NotBefore field (resp., the NotOnOrAfter field) of
- 651 the certificate.

652 The certificate referred to in the above processing rules MUST be the same certificate used to construct  
653 the <saml:Subject> of the query.

### 654 4.5 Example

655 For example, the principal issues the following attribute query:

```
656 <samlp:AttributeQuery
657   xmlns:saml="urn:oasis:names:tc:SAML:2.0:assertion"
658   xmlns:samlp="urn:oasis:names:tc:SAML:2.0:protocol"
659   ID="aaf23196-1773-2113-474a-fe114412ab72"
660   Version="2.0"
661   IssueInstant="2006-07-17T20:31:40Z">
662   <saml:Issuer
663     Format="urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName">
664     CN=trscavo@uiuc.edu,OU=User,O=NCSA-TEST,C=US
665   </saml:Issuer>
666   <saml:Subject>
667     <saml:NameID
668       Format="urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName">
669       CN=trscavo@uiuc.edu,OU=User,O=NCSA-TEST,C=US
670     </saml:NameID>
671   </saml:Subject>
672   <saml:Attribute
673     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
674     Name="urn:oid:1.3.6.1.4.1.5923.1.1.1.6"
675     FriendlyName="eduPersonPrincipalName">
676   </saml:Attribute>
677   <saml:Attribute
678     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
679     Name="urn:oid:2.5.4.42"
680     FriendlyName="givenName">
681   </saml:Attribute>
682   <saml:Attribute
683     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
684     Name="urn:oid:2.5.4.4"
685     FriendlyName="sn">
686   </saml:Attribute>
687   <saml:Attribute
```

```
688     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
689     Name="urn:oid:1.3.6.1.4.1.1466.115.121.1.26"
690     FriendlyName="mail">
691   </saml:Attribute>
692 </samlp:AttributeQuery>
```

693 After processing the request, the identity provider issues a response containing an assertion such as the  
694 one listed below. Note that the assertion was obtained by a principal who authenticated to an identity  
695 provider via TLS [RFC2246] client authentication, as indicated in the <saml:AuthnStatement>  
696 element.

```
697 <!-- SAML Assertion for an X.509 Subject -->
698 <saml:Assertion
699   xmlns:saml="urn:oasis:names:tc:SAML:2.0:assertion"

766     x500:Encoding="LDAP"
767     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
768     Name="urn:oid:2.5.4.42"
769     FriendlyName="givenName">
770     <saml:AttributeValue xsi:type="xs:string">
771       Tom
772     </saml:AttributeValue>
773   </saml:Attribute>
774   <saml:Attribute
775     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
776     x500:Encoding="LDAP"
777     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
778     Name="urn:oid:2.5.4.4"
779     FriendlyName="sn">
780     <saml:AttributeValue xsi:type="xs:string">
781       Scavo
782     </saml:AttributeValue>
783   </saml:Attribute>
784   <saml:Attribute
785     xmlns:x500="urn:oasis:names:tc:SAML:2.0:profiles:attribute:X500"
786     x500:Encoding="LDAP"
787     NameFormat="urn:oasis:names:tc:SAML:2.0:attrname-format:uri"
788     Name="urn:oid:1.3.6.1.4.1.1466.115.121.1.26"
789     FriendlyName="mail">
790     <saml:AttributeValue xsi:type="xs:string">
791       trscavo@gmail.com
792     </saml:AttributeValue>
793   </saml:Attribute>
794 </saml:AttributeStatement>
795 </saml:Assertion>

```

796 The attributes in the above example (eduPersonPrincipalName, givenName, sn, and mail) conform  
797 to the MACE-Dir Attribute Profile for SAML 2.0 [MACEAttrib] and are for illustration purposes only.

## 798 4.6 Use of Metadata

799 As outlined in section 3.8, the use of SAML V2.0 metadata [SAMLMeta] is RECOMMENDED, but since a  
800 principal is not expected to publish metadata about itself, only the use of identity provider metadata is  
801 profiled below. Note, however, that the principal may wield a client that relies on service provider metadata  
802 (see, e.g., section 4.8.1), in which case the rules in section 3.8.2 apply as well.

### 803 4.6.1 Identity Provider Metadata

804 An identity provider that uses SAML V2.0 metadata MUST include an  
805 <md:AttributeAuthorityDescriptor> element that satisfies the rules given in section 3.8.1, except  
806 that in this case the identity provider uses XML attribute supportsX509SelfQuery instead of  
807 supportsX509Query [X509Query-XSD]:

```
808 <xsi:attribute
```

809 `name="supportsX509SelfQuery" type="boolean" use="optional"/>`

810 As before, use of this attribute is OPTIONAL.

811 An example of identity provider metadata follows:

```
812 <!-- An Identity Provider supporting both deployment profiles -->
813 <md:EntityDescriptor
814   xmlns:md="urn:oasis:names:tc:SAML:2.0:metadata"
815   entityID="https://idp.example.org/saml">
816
817   <md:AttributeAuthorityDescriptor
818     protocolSupportEnumeration="urn:oasis:names:tc:SAML:2.0:protocol">
819
820     <md:AttributeService
821       x509qry:supportsX509Query="true"
822       x509qry:supportsX509SelfQuery="true"
823       xmlns:x509qry="urn:oasis:names:tc:SAML:metadata:X509:query"
824       Binding="urn:oasis:names:tc:SAML:2.0:bindings:SOAP"
825       Location="https://idp.example.org:8443/saml-idp/AA"/>
826
827     <md:NameIDFormat>
828       urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName
829     </md:NameIDFormat>
830
831     <!-- see [MACEAttr] -->
832     <md:AttributeProfile>
833       urn:mace:dir:profiles:attribute:samlv2
834     </md:AttributeProfile>
835
836   </md:AttributeAuthorityDescriptor>
837
838 </md:EntityDescriptor>
```

839 Note that this identity provider supports both X.509 attribute query deployment profiles at the same  
840 endpoint location.

## 840 4.7 Security and Privacy Considerations

841 Except for section 3.9.2, the security and privacy considerations outlined in section 3.9 apply equally as  
842 well in the case of self-query. As a further privacy measure, a principal may limit the self-query to non-  
843 identity attributes (such as givenName) and push the resulting assertion to the service provider who  
844 subsequently queries the identity provider for additional attributes (according to the deployment profile in  
845 section 3). In this way, a service provider receives only those attributes that are actually required for  
846 access.

## 847 4.8 Implementation Guidelines (non-normative)

848 In addition to the guidelines outlined in section 3.10, the following non-normative guidelines are provided  
849 for the convenience of implementers.

### 849 4.8.1 Discovery

850 In the SAML Attribute Query Deployment Profile for X.509 Subjects (section 3), we encounter the problem  
851 of identity provider discovery (section 3.10.1). In the case where the principal self-queries for attributes, we  
852 encounter a different problem, which we call *service provider discovery*. In both cases, we assume the  
853 client knows the principal's preferred identity provider, so identity provider discovery is a non-issue in the  
854 case of self-queries, but in that case the client is faced with a self-query for unknown attributes.

855 If the client had access to the published metadata of potential service providers, and that metadata  
856 included the attribute requirements of the service providers, the client would be able to formulate specific  
857 attribute queries targeted for specific service providers.

858 This deployment profile does not specify a particular method of service provider discovery.

## 859 **5 Implementation Conformance**

860 A client implementation of this specification shall be a conforming *Extended Mode X.509 Attribute Query*  
861 *Requester* or a conforming *Extended Mode X.509 Attribute Self-Query Requester* (or both). On the server  
862 side, an implementation of this specification shall be a conforming *Extended Mode X.509 Attribute Query*  
863 *Responder* or a conforming *Extended Mode X.509 Attribute Self-Query Responder*, respectively.

861 An Extended Mode X.509 Attribute Query Requester or Responder MUST conform to the relevant  
862 normative statements in section 3. An Extended Mode X.509 Attribute Self-Query Requester or  
863 Responder MUST conform to the relevant normative statements in section 4, which includes references to  
864 normative portions of section 3.

## 862 **6 Acknowledgments**

863 The editors would like to acknowledge the contributions of the OASIS Security Services Technical  
864 Committee, whose voting members at the time of publication were:

- 865 • Hal Lockhart, BEA Systems, Inc.
- 866 • Rob Philpott, EMC Corporation
- 867 • Eric Tiffany, Liberty Alliance Project
- 868 • Scott Cantor, Internet2
- 869 • Bob Morgan, Internet2
- 870 • Tom Scavo, National Center for Supercomputing Applications (NCSA)
- 871 • Peter Davis, Neustar, Inc.
- 872 • Jeff Hodges, Neustar, Inc.
- 873 • Frederick Hirsch, Nokia Corporation
- 874 • Abbie Barbir, Nortel Networks Limited
- 875 • Paul Madsen, NTT Corporation
- 876 • Ari Kermaier, Oracle Corporation
- 877 • Prateek Mishra, Oracle Corporation
- 878 • Brian Campbell, Ping Identity Corporation
- 879 • Anil Saldhana, Red Hat
- 880 • Eve Maler, Sun Microsystems
- 881 • Emily Xu, Sun Microsystems
- 882 • Kent Spaulding, Tripod Technology Group, Inc.
- 883 • David Staggs, Veterans Health Administration

884 The editors would also like to acknowledge the contributions of the following individuals:

- 885 • Von Welch, National Center for Supercomputing Applications (NCSA)
