Abstract:

The SCA Web Service binding specified in this document applies to the services and references of an SCA composite. It defines the manner in which a service can be made available as a web service, and in which a reference can invoke a web service.

This binding is a WSDL-based binding; that means it either references an existing WSDL binding or allows one to specify enough information to generate one. When an existing WSDL binding is not referenced, rules defined in this document allow one to generate a WSDL binding.

Status:

This document was last revised or approved by the OASIS Service Component Architecture / Bindings (SCA-Bindings) TC on the above date. The level of approval is also listed above. Check the "Latest Version" or "Latest Approved Version" location noted above for possible later revisions of this document.

Technical Committee members should send comments on this specification to the Technical Committee's email list. Others should send comments to the Technical Committee by using the "Send A Comment" button on the Technical Committee's web page at <http://www.oasis-open.org/committees/sca-bindings/>.

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Technical Committee web page (<http://www.oasis-open.org/committees/sca-bindings/ipr.php>).

The non-normative errata page for this specification is located at <http://www.oasis-open.org/committees/sca-bindings/>.

1 Introduction

The SCA Web Service binding specified in this document applies to the services and references of composites and components [**SCA-Assembly**]. It defines the manner in which a service can be made available as a web service, and in which a reference can invoke a web service.

This binding is a WSDL-based binding; that means it either references an existing WSDL binding or can be configured to specify enough information to generate one. When an existing WSDL binding is not referenced, rules defined in this document allow one to generate a WSDL binding. This specification only defines a binding using WSDL 1.1.

The Web Service binding can point to an existing WSDL [**WSDL11**] document, separately authored, that specifies the details of the WSDL binding to be used to provide or invoke the web service. In this case the SCA web services binding allows anything that is valid in a WSDL binding, including rpc-encoded style and binding extensions. It is the responsibility of the SCA system provider to ensure support for all options specified in the WSDL binding. Interoperation of such services is not guaranteed.

The SCA Web Service binding also provides attributes that can be used to provide the details of a WSDL SOAP binding. This allows a WSDL document to be synthesized in the case that one does not already exist. In this case only WS-I compliant mapping is supported.

The SCA Web Service binding can be further customized through the use of SCA Policy Sets. For example, a requirement to conform to a WS-I profile [**WSI-Profiles**]{**WSI-Profiles**}

Formatted: Font color: Auto

1.1 Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [**RFC2119**].

This specification uses predefined namespace prefixes throughout; they are given in the following list. Note that the choice of any namespace prefix is arbitrary and not semantically significant.

Table 1-1 Prefixes and Namespaces used in this specification

Prefix	Namespace	Notes
xs	"http://www.w3.org/2001/XMLSchema"	Defined by XML Schema 1.0 specification
wsa	"http://www.w3.org/2005/08/addressing"	Defined by WS-Addressing 1.0
wsp	"http://www.w3.org/ns/ws-policy"	Defined by WS-Policy 1.5
wsrmp	"http://docs.oasis-open.org/ws-rx/wsrmp/200702"	Defined by WS-ReliableMessaging Policy 1.2
soap11	"http://schemas.xmlsoap.org/soap/envelope/"	Defined by SOAP 1.1
soap12	"http://www.w3.org/2005/08/addressing"	Defined by SOAP 1.2
wsdli	"http://www.w3.org/ns/wsdli-instance"	Defined by WSDL 2.0

wsoap11	"http://schemas.xmlsoap.org/wsdl/soap/"	Defined by WSDL 1.1 [WSDL11]
wsoap12	"http://schemas.xmlsoap.org/wsdl/soap12/"	Defined by [W11-SOAP12]
sca	"http://docs.oasis-open.org/ns/opencsa/sca/200903"	Defined by the SCA specifications

59 1.4 Naming Conventions

60 This specification follows some naming conventions for artifacts defined by the
61 specification. In addition to the conventions defined by section 1.3 of the Assembly
62 **[SCA-Assembly]** specification, this specification adds three additional conventions:

- 63 1. Where the names of elements and attributes consist partially or wholly of
64 acronyms, the letters of the acronyms use the same case. When the acronym
65 appears at the start of the name of an element or an attribute, or after a period,
66 it is in lower case. If it appears elsewhere in the name of an element or an
67 attribute, it is in upper case. For example, an attribute might be named "uri" or
68 "jndiURL".

- 69
70
71
72
73
74
75
2. Where the names of types consist partially or wholly of acronyms, the letters of the acronyms are in all upper case. For example, an XML Schema type might be named "JCABinding" or "MessageID".
 3. Values, including local parts of QName values, follow the rules for names of elements and attributes as stated above, with the exception that the letters of acronyms are in all upper case. For example, a value might be "JMSDefault" or "namespaceURI".

2 Web Service Binding Schema

The Web Service binding element is defined by the following pseudo-schema.

```
<binding.ws name="xs:NCName"?
  requires="list of xs:QName"?
  policySets="list of xs:QName"?
  uri="xs:anyURI"?
  wsdlElement="xs:anyURI"?
  wsdl:wsdlLocation="list of xs:anyURI pairs"?
  ...>
  <wireFormat ... />?
  <operationSelector ... />?
  <endpointReference>...</endpointReference>*
  ...
</binding.ws>
```

- **/binding.ws/@name** - as defined in the SCA Assembly Specification [SCA-Assembly].
- **/binding.ws/@requires** - as defined in the SCA Assembly Specification [SCA-Assembly].
- **/binding.ws/@policySets** - as defined in the SCA Assembly Specification [SCA-Assembly].
- **/binding.ws/@uri** - the resolution algorithm of Section 2.2 below describes how this attribute is interpreted. For an SCA reference, the @uri attribute MUST be an absolute value. [BWS20001]
- **/binding.ws/@wsdlElement** - when present this attribute specifies the URI of a WSDL element. The value of the @wsdlElement attribute MUST identify an element in an existing WSDL 1.1 document. [BWS20002] The URI can have the following forms:

- Service:

`<WSDL-namespace-URI>#wsdl.service(<service-name>)`

If the binding is for an SCA service, the `wsdlElement` attribute MUST NOT specify the `wsdl.service` form of URI. If the binding is for an SCA service, the `wsdlElement` attribute MUST NOT specify the `wsdl.service` form of URI. [BWS20003]

If the binding is for an SCA reference, the set of available ports for the reference consists of the ports in the WSDL service that have portTypes which are compatible supersets of the SCA reference as defined in the SCA Assembly Model specification [SCA-Assembly] and satisfy all the policy constraints of the binding.

If the `wsdl.service` form of `wsdlElement` is used on an SCA reference binding, the set of available ports for the reference MUST contain at least one port. If the `wsdl.service` form of `wsdlElement` is used on an SCA reference binding, the set of available ports for the reference MUST contain at least one port. [BWS20004]

The set of available ports represents a single SCA reference binding with respect to the multiplicity of that SCA reference. If the `wsdl.service` form of `wsdlElement` is used on an SCA reference binding, the SCA runtime MUST raise an error if there are no available ports that it supports. If the `wsdl.service` form of

123 *wsdlElement* is used on an SCA reference binding, the SCA runtime MUST raise
124 an error if there are no available ports that it supports. [BWS20005] When an
125 invocation is made using an SCA reference binding with the *wsdl.service* form of
126 *wsdlElement*, the SCA runtime MUST use exactly one port from the set of
127 available ports for the reference (with port selection on a per-invocation basis
128 permitted). When an invocation is made using an SCA reference binding with the
129 *wsdl.service* form of *wsdlElement*, the SCA runtime MUST use exactly one port
130 from the set of available ports for the reference (with port selection on a per-
131 invocation basis permitted); [BWS20006]

- Port:

<WSDL-namespace-URI>#wsdl.port(<service-name>/<port-name>)

If the binding is for an SCA service, the portType associated with the specified
WSDL port MUST be compatible with the SCA service interface as defined in
section 2.1, and the port MUST satisfy all the policy constraints of the
binding. [BWS20007] The SCA runtime MUST expose an endpoint for the specified
WSDL port, or raise an error if it does not support the WSDL port. [BWS20008] If
the binding is for an SCA reference, the portType associated with the specified
WSDL port MUST be a compatible superset of the SCA reference interface as
defined in the SCA Assembly Model specification [SCA-Assembly][SCA-
Assembly], and the port MUST satisfy all the policy constraints of the binding. If
the binding is for an SCA reference, the portType associated with the specified
WSDL port MUST be a compatible superset of the SCA reference interface as
defined in the SCA Assembly Model specification [SCA-Assembly], and the port
MUST satisfy all the policy constraints of the binding. [BWS20009] The SCA
runtime MUST use the specified WSDL port for invocations made using the SCA
reference, or raise an error if it does not support the WSDL port. [BWS20010]

- Binding:

<WSDL-namespace-URI>#wsdl.binding(<binding-name>)

If the binding is for an SCA service, the portType associated with the specified
WSDL binding MUST be compatible with the SCA service interface as defined in
section 2.1, and the WSDL binding MUST satisfy all the policy constraints of the
binding. [BWS20011] The SCA runtime MUST expose an endpoint for the
specified WSDL binding, or raise an error if it does not support the WSDL binding.
[BWS20012]

If the binding is for an SCA reference, the portType associated with the specified
WSDL binding MUST be a compatible superset of the SCA reference interface as
defined in the SCA Assembly Model specification [SCA-Assembly][SCA-
Assembly], and the WSDL binding MUST satisfy all the policy constraints of the
binding. If the binding is for an SCA reference, the portType associated with the
specified WSDL binding MUST be a compatible superset of the SCA reference
interface as defined in the SCA Assembly Model specification [SCA-Assembly],
and the WSDL binding MUST satisfy all the policy constraints of the binding.
[BWS20013] The SCA runtime MUST use the specified WSDL binding for
invocations made using the SCA reference, or raise an error if it does not support
the WSDL binding. [BWS20014]

When the *wsdl.binding* form of *wsdlElement* is used, the endpoint address URI
for an SCA reference MUST be specified by either the *@uri* attribute on the
binding or a *WS-Addressing EndpointReference* element, except where the SCA
Assembly Model specification [SCA-Assembly][SCA-Assembly] states that the
@uri attribute can be omitted. When the *wsdl.binding* form of *wsdlElement* is used

173 | , the endpoint address URI for an SCA reference MUST be specified by either the
174 | @uri attribute on the binding or a WS-Addressing EndpointReference element,
175 | except where the SCA Assembly Model specification [SCA-Assembly] states that
176 | the @uri attribute can be omitted. [BWS20015]

- **/binding.ws/@wsdl:wsdlLocation** – when present this attribute specifies the location(s) of the WSDL document(s) associated with specific namespace(s).

179 | [The @wsdl:wsdlLocation attribute can be used in the event that the <WSDL-
180 | namespace-URI> value in the @wsdlElement attribute is not dereferencable, or when
181 | the intended WSDL document is to be found at a different location than the one
182 | pointed to by the <WSDL-namespace-URI>. The semantics of this attribute are
183 | specified in Section 7.1 of WSDL 2.0 \[WSDL20\]. The @wsdl:wsdlLocation attribute
184 | MAY be specified by the binding in the event that the <WSDL-namespace-URI> in
185 | the 'endpoint' attribute is not dereferencable, or when the intended WSDL document
186 | is to be found at a different location than the one pointed to by the <WSDL-
187 | namespace-URI>.](#) [BWS20016]

188 | [If the @wsdl:wsdlLocation attribute is used the @wsdlElement attribute MUST also
189 | be specified. If the @wsdl:wsdlLocation attribute is used the @wsdlElement attribute
190 | MUST also be specified.](#) [BWS20017] The semantics of this attribute are specified in
191 | Section 7.1 of WSDL 2.0 [WSDL20].

192 | The value of the @wsdl:wsdlLocation attribute MUST identify an existing WSDL 1.1
193 | document. [BWS20018]

- **/binding.ws/wireFormat** – as defined in the SCA Assembly Specification [SCA-Assembly]. This specification does not define any new wireFormat elements.
- **/binding.ws/operationSelector** – as defined in the SCA Assembly Specification [SCA-Assembly]. This specification does not define any new operationSelector elements.
- **/binding.ws/endpointReference** – when present this element provides the WS-Addressing [WS-Addr] EndpointReference that specifies the endpoint for the service or reference.

202 | ~~• **/binding.ws/@{any}** – this is an extensibility mechanism to allow extensibility via
203 | attributes.~~

204 | ~~• **/binding.ws/{any}** – this is an extensibility mechanism to allow extensibility via
205 | elements.~~

206 | A binding.ws element MUST NOT contain more than one of any of the following: the
207 | @uri attribute; the @wsdlElement attribute referring to a WSDL port or to a WSDL
208 | service; the endpointReference element. [BWS20019]

209 | The endpoint address URI for an SCA service or the callback element of an SCA
210 | reference is determined as specified in section 2.2. [For the callback element of an SCA
211 | service, the binding MUST NOT specify an endpoint address URI or a WS-Addressing
212 | EndpointReference. For the callback element of an SCA service, the binding MUST NOT
213 | specify an endpoint address URI or a WS-Addressing EndpointReference.](#) [BWS20020]

214 | The SCA runtime MUST support all the attributes of the <binding.ws> element, namely
215 | @name, @uri, @requires, @policySets, @wsdlElement, and
216 | @wsdl:wsdlLocation. [BWS20021]

217 | The SCA runtime SHOULD support the element <endpointReference>. [BWS20022] If an
218 | SCA runtime does not support the element <endpointReference>, then it MUST reject
219 | an SCA WS Binding XML document (as defined in Section 5.1) that contains the element.
220 | [BWS20023]

221 The <binding.ws> element MUST conform to the XML schema defined in sca-binding-
222 webservice.xsd. [BWS20024]

223 2.1 Compatibility of SCA Service Interfaces and WSDL portTypes

224 A WSDL portType is compatible with an SCA service interface if and only if all of the
225 following conditions are satisfied:

- 226 1. The SCA service interface is remotable.
- 227 2. The operations on the portType are the same as the operations on the SCA
228 service interface, with the same operation name, same input types (taking order
229 as significant), same output types (taking order as significant), and same
230 fault/exception types. If the SCA service interface is not a WSDL portType, it is
231 mapped to a WSDL portType for the purposes of this comparison. The mapping
232 is defined in the relevant SCA specification for the interface type. If the interface
233 cannot be mapped to WSDL, the SCA service interface is not compatible with the
234 WSDL portType.
- 235 3. WSDL 1.1 message parts can point either to an XML Schema element declaration
236 or to an XML Schema type declaration. When determining compatibility between
237 two WSDL operations, a message part that points to an XML Schema element is
238 considered to be incompatible with a message part that points to an XML Schema
239 type.
- 240 4. If either the portType or the SCA service interface declares an SCA callback
241 interface, then both the portType and the SCA service interface declare callback
242 interfaces and these callback interfaces are compatible according to points 1
243 through 3 above.

244 2.2 Endpoint URI resolution

245 This specification does not mandate any particular way to determine the URI for a web
246 services binding on an SCA service. An absolute URI can be indicated by the @uri
247 attribute, by the URI in a wsa:Address element within an endpointReference element, or
248 by the URI indicated in a WSDL port via a @wsdlElement attribute. Implementations
249 can use the specified URI as the service endpoint URI or they can use a different URI
250 which might include portions of the specified URI. For example, the service endpoint
251 URI might be produced by modifying any or all of the host name, the port number, and
252 a portion of the path.

253 Note that if no absolute URI is indicated by any of these elements, implementations can
254 use the structural URI for the binding as a portion of the URI for the eventual deployed
255 endpoint. In addition, the @uri attribute value could be relative; implementations are
256 encouraged to combine this value with the structural URI for the service in determining
257 a deployed URI.

258 The target address for a reference binding is defined as one of the following:

- 259 A. The value of the @uri attribute
- 260 B. The value of the wsa:Address element of the endpointReference element
- 261 C. The value of the address element of the WSDL port referenced by the
262 @wsdlElement attribute
- 263 D. The value of the address element of one of the set of available WSDL ports as
264 specified under the definition of the @wsdlElement attribute when it references a
265 WSDL service element

266 If there is no target address for a reference binding, the SCA runtime MUST raise an
267 error. [BWS20025]

268 For a reference binding, the SCA runtime MUST use the target address. For a reference
269 binding, the SCA runtime MUST use the target address. [BWS20026]

270 2.3 Interface mapping

271 When *binding.ws* is used on a service or reference with an interface that is not defined
272 by *interface.wsdl*, the SCA runtime MUST derive a WSDL portType for the service or
273 reference from the interface using the rules defined for that SCA interface type. When
274 *binding.ws* is used on a service or reference with an interface that is not defined by
275 *interface.wsdl*, the SCA runtime MUST derive a WSDL portType for the service or
276 reference from the interface using the rules defined for that SCA interface type.
277 [BWS20027]

278 An SCA runtime MUST raise an error if the interface on a service or reference element
279 with a *binding.ws* element does not map to a WSDL portType. An SCA runtime MUST
280 raise an error if the interface on a service or reference element with a *binding.ws*
281 element does not map to a WSDL portType. [BWS20028]

282 For example, for *interface.java*, the mapping to a WSDL portType is as defined in the
283 SCA Java Common Annotations and API Specification [SCA-JCAA].

284 *binding.ws* implementations can use appropriate standards, for example WS-I AP 1.0
285 [WSI-AP] or MTOM [MTOM], to map interface parameters to binary attachments
286 transparently to the target component.

287

288 2.4 Production of WSDL description for an SCA service

289 Any service hosted by an SCA runtime with one or more web service bindings with HTTP
290 endpoints SHOULD return a WSDL description of the service in response to an HTTP GET
291 request with the "?wsdl" suffix to that HTTP endpoint. Any service hosted by an SCA
292 runtime with one or more web service bindings with HTTP endpoints SHOULD return a
293 WSDL description of the service in response to an HTTP GET request with the "?wsdl"
294 suffix to that HTTP endpoint. [BWS20029]

295 If none of the web service bindings for an SCA service have HTTP endpoints, then the
296 SCA runtime SHOULD provide some other means of obtaining the WSDL description of
297 the service. If none of the web service bindings for an SCA service have HTTP endpoints,
298 then the SCA runtime SHOULD provide some other means of obtaining the WSDL
299 description of the service. [BWS20030] This can include out of band mechanisms, for
300 example publication to a UDDI registry.

301 Refer to section 4 for a detailed definition of the rules that are used for generating the
302 WSDL description of an SCA service with one or more web service bindings.

303

304 2.5 Additional binding configuration data

305 SCA runtime implementations can provide additional metadata that is associated with a
306 web service binding. This is done by providing extension points in the schema; refer to
307 Appendix A: Web Services XML Binding Schema for the locations of these extension
308 points. SCA runtime implementations MAY provide additional metadata that is associated
309 with a web service binding. [BWS20031]

Formatted: Not Highlight

310 This can be used for example to enable JAX-WS **[JAX-WS]** handlers to be executed as
311 part of the target component dispatch. -The specification of such metadata is SCA
312 runtime-specific and is outside of the scope of this document.

313

314 2.6 Web Service Binding and SOAP Intermediaries

315 The Web Service binding does not provide any direct or explicit support for SOAP
316 intermediaries **[SOAP]**.

317

318 2.7 Support for WSDL extensibility

319 When a binding.ws element uses the @wsdlElement attribute, the details of the binding
320 are specified by the WSDL element referenced by the value of the attribute. Per the
321 WSDL specification, WSDL allows for extensibility via elements as well as attributes, and
322 it specifies rules for processing such elements. This specification does not constrain the
323 use of such extensibility in WSDL and relies on the rules specified in the WSDL
324 specification for processing such extended elements.

325 An SCA runtime MUST support the WSDL extensions defined in the namespace
326 associated with the prefix "sca" (as defined in section 1.1). An SCA runtime MUST
327 support the WSDL extensions defined in the namespace associated with the prefix "sca"
328 (as defined in section 1.1): [BWS20032]

329 The SCA runtime MUST support the WSDL 1.1 binding extension for SOAP 1.1 over HTTP
330 [WSDL11][WSDL11], as identified by the WSDL element wsoap11:binding that has
331 the @transport attribute with a value of "http://schemas.xmlsoap.org/soap/http". The
332 SCA runtime MUST support the WSDL 1.1 binding extension for SOAP 1.1 over HTTP
333 [WSDL11], as identified by the WSDL element wsoap11:binding that has the
334 @transport attribute with a value of "http://schemas.xmlsoap.org/soap/http".
335 [BWS20033]

Formatted: Highlight

336 The SCA runtime SHOULD support the WSDL 1.1 binding extension for SOAP 1.2 over
337 HTTP [W11-SOAP12][W11-SOAP12], as identified by the WSDL element
338 wsoap12:binding that has the @transport attribute with a value of
339 "http://schemas.xmlsoap.org/soap/http". The SCA runtime SHOULD support the WSDL
340 1.1 binding extension for SOAP 1.2 over HTTP [W11-SOAP12], as identified by the
341 WSDL element wsoap12:binding that has the @transport attribute with a value of
342 "http://schemas.xmlsoap.org/soap/http". [BWS20034]

Formatted: Highlight

343 Because a WSDL document might contain extension elements that cannot be supported
344 by the SCA runtime, when using the @wsdlElement form of binding.ws it is not possible
345 to determine whether the binding is supported by the SCA runtime without parsing the
346 referenced WSDL element and its dependent elements.

347 2.8 Intents listed in the bindingType

348 This specification places no requirements on the intents that are listed as either
349 @alwaysProvides or @mayProvides in the bindingType for binding.ws.

350 2.9 Intents and binding configuration

351 This binding mandates support for SOAP 1.1 and encourages SOAP 1.2 support. The
352 <bindingType> element associated with this binding MUST include the SOAP_1_1 intent
353 in its @mayProvides or @alwaysProvides attributes. [BWS20035] The <bindingType>

354 element associated with this binding SHOULD include the SOAP.1_2 intent in its
355 @mayProvides attribute. [BWS20036] For more details on the <bindingType> element
356 see [SCA-Policy].

357 The SCA runtime MUST raise an error if a web service binding is configured with a policy
358 intent(s) that conflicts with the binding instance's configuration. The SCA runtime MUST
359 raise an error if a web service binding is configured with a policy intent(s) that conflicts
360 with the binding instance's configuration. [BWS20037]

361 For example, it is an error to use the SOAP policy intent in combination with a WSDL
362 binding that does not use SOAP.

363 3 Web Service Binding Examples

364 The following snippets show the sca.composite file for the MyValueComposite file
365 containing the service element for the MyValueService and reference element for the
366 StockQuoteService. Both the service and the reference use a Web Service binding.

367

368 3.1 Example Using WSDL documents

369 This example shows a service and reference using the SCA Web Service binding, using
370 existing WSDL documents in both cases. In each case there is a single binding element,
371 whose name defaults to the service/reference name.

372 The service's binding is defined by the WSDL document associated with the given URI.
373 This service conforms to WS-I Basic Profile 1.1.

374 The first reference's binding is defined by the specified WSDL service in the WSDL
375 document at the given location. The reference can use any of the WSDL service's ports
376 to invoke the target service. The second reference's binding is defined by the specified
377 WSDL binding. The specific endpoint URI to be invoked is provided via the *@uri*
378 attribute.

379

```
380 <?xml version="1.0" encoding="ASCII"?>
381 <composite xmlns="http://docs.oasis-open.org/ns/opencsa/sca/200903"
382           name="MyValueComposite">
383   <service name="MyValueService">
384     <interface.java interface="services.myvalue.MyValueService"/>
385     <binding.ws wsdlElement="http://www.example.org/MyValueService#
386
387 wsdl.binding(MyValueService/MyValueServiceSOAP)"/>
388     ...
389   </service>
390
391   ...
392
393   <reference name="StockQuoteReference1">
394     <interface.java interface="services.stockquote.StockQuoteService"/>
395     <binding.ws wsdlElement="http://www.example.org/StockQuoteService#
396                wsdl.service(StockQuoteService) "
397     wsdl:wsdlLocation="http://www.example.org/StockQuoteService
398                http://www.example.org/StockQuoteService.wsdl"/>
399   </reference>
400
401   <reference name="StockQuoteReference2">
402     <interface.java interface="services.stockquote.StockQuoteService"/>
403     <binding.ws wsdlElement="http://www.example.org/StockQuoteService#
404                wsdl.binding(StockQuoteBinding) "
405     wsdl:wsdlLocation="http://www.example.org/StockQuoteService
406                http://www.example.org/StockQuoteService.wsdl"
407     uri="http://www.example.org/StockQuoteService5"/>
408   </reference>
409 </composite>
```

410 3.2 Examples Without a WSDL Document

411 The next example shows the simplest form of the binding element without WSDL
412 document, assuming all defaults for portType mapping and SOAP binding synthesis. The
413 service and reference each have a single binding element, whose name defaults to the
414 service/reference name.

415 The service is to be made available at a location determined by the deployment of this
416 component. It will have a single port address and SOAP binding, with a simple WS-I
417 BasicProfile 1.1 compliant binding, and using the default options for mapping the Java
418 interface to a WSDL portType.

419 The reference indicates a service to be invoked which has a SOAP binding and portType
420 that matches the default options for binding synthesis and interface mapping. One
421 particular use of this case would be where the reference is to an SCA service with a web
422 service binding which itself uses all the defaults.

423

```
424 <?xml version="1.0" encoding="ASCII"?>
425 <composite xmlns="http://docs.oasis-open.org/ns/opencsa/sca/200903"
426     name="MyValueComposite">
427
428     <service name="MyValueService">
429         <interface.java interface="services.myvalue.MyValueService"/>
430         <binding.ws/>
431         ...
432     </service>
433
434     ...
435
436     <reference name="StockQuoteService">
437         <interface.java interface="services.stockquote.StockQuoteService"/>
438         <binding.ws uri="http://www.example.org/StockQuoteService"/>
439     </reference>
440 </composite>
```

441

442 The next example shows the use of the binding element without a WSDL document, with
443 multiple SOAP bindings with non-default values. The SOAP 1.2 binding name defaults to
444 the service name, the SOAP 1.1 binding is given an explicit name. The reference has a
445 web service binding which uses SOAP 1.2, but otherwise uses all the defaults for SOAP
446 binding. The reference binding name defaults to the reference name.

447

```
448 <?xml version="1.0" encoding="ASCII"?>
449 <composite xmlns="http://docs.oasis-open.org/ns/opencsa/sca/200903"
450     name="MyValueComposite">
451
452     <service name="MyValueService">
453         <interface.java interface="services.myvalue.MyValueService"/>
454         <binding.ws name="MyValueServiceSOAP11" requires="SOAP.1_1"/>
455         <binding.ws requires="SOAP.1_2"/>
456         ...
457     </service>
458
459     ...
460
461     <reference name="StockQuoteService">
462         <interface.java interface="services.stockquote.StockQuoteService"/>
463         <binding.ws uri="http://www.example.org/StockQuoteService"
464             requires="SOAP.1_2"/>
465     </reference>
```

466
467

```
</composite>
```

468 4 Transport Binding

469 The binding.ws element provides numerous ways to specify exactly how messages ought
470 to be transmitted from or to the reference or service. Those ways include references to
471 WSDL binding elements from the @wsdlElement attribute, policy intents, and even
472 vendor extensions within the binding.ws element. This section describes the defaults to
473 be used if the specific transport details are not otherwise specified.

474 4.1 Intents

475 So as to narrow the range of choices for how messages are carried, the following policy
476 intents affect the transport binding:

- 477 • SOAP
478 When the SOAP intent is required, the SCA runtime MUST transmit and receive
479 messages using SOAP. One or more SOAP versions can be used. When the SOAP
480 intent is required, the SCA runtime MUST transmit and receive messages using
481 SOAP. One or more SOAP versions can be used. [BWS40001]
- 482 • SOAP.1_1
483 When the SOAP.1_1 intent is required, the SCA runtime MUST transmit and receive
484 messages using only SOAP 1.1. When the SOAP.1_1 intent is required, the SCA
485 runtime MUST transmit and receive messages using only SOAP 1.1. [BWS40002]
- 486 • SOAP.1_2
487 When the SOAP.1_2 intent is required, the SCA runtime MUST transmit and receive
488 messages using only SOAP 1.2. When the SOAP.1_2 intent is required, the SCA
489 runtime MUST transmit and receive messages using only SOAP 1.2. [BWS40003]

490 4.2 Default Transport Binding Rules

491 4.2.1 WS-I Basic Profile Alignment

492 To align to WS-I Basic Profile, the resulting WSDL port needs to be all document-literal,
493 or all rpc-literal binding (per WS-I Basic Profile 1.1 R2705 [WSI-Profiles]). This means,
494 for any given portType, for all messages referenced by all operations in that portType,
495 either

- 496 • that every message part references an XML Schema type (rpc-literal pattern)
- 497 • or that every message references exactly zero or one XML Schema elements
498 (document-literal pattern)

499 For an SCA service or reference element, the portType from the service's or reference's
500 interface or derived from that interface MUST follow either the rpc-literal pattern or the
501 document-literal pattern. For an SCA service or reference element, the portType from the
502 service's or reference's interface or derived from that interface MUST follow either the
503 rpc-literal pattern or the document-literal pattern. [BWS40004]

504 The rest of this section assumes the short-hand reference of a "rpc-literal" or
505 "document-literal" pattern, depending on which of the two bullet points above it
506 matches.

507 4.2.2 Default Transport Binding Rules

508 The following defines the **default transport binding rules** for the Web Service binding:

- 509 • HTTP-based transfer protocol;
- 510 • SOAP 1.1 binding;
- 511 • "literal" format as described in section 3.5 of **[WSDL11]**;
- 512 • Either the document literal or rpc literal pattern, depending on the service or
513 reference interface as described in section 4.2.1;
 - 514 ○ For document literal pattern, each message uses "document" style, as per
515 section 3.5 of **[WSDL11]**;
 - 516 ○ For rpc-literal pattern, each message uses "rpc" style, as per section 3.5
517 of **[WSDL11]** and the child elements of the SOAP Body element are
518 namespace qualified with a non-empty namespace name;
- 519 • For SOAP 1.1 messages, the SOAPAction HTTP header described in section 6.1.1
520 of **[SOAP11]** represents the empty string, in quotes ("");
- 521 • For SOAP 1.2 messages, the SOAP Action feature described in section 6.5 of
522 **[SOAP12Adjuncts]** does not appear;
- 523 • All WSDL message parts are carried in the SOAP body.

524 ~~In the event that the transport details are not otherwise determined, an SCA runtime~~
525 ~~MUST enable the default transport binding rules.~~~~In the event that the transport details~~
526 ~~are not otherwise determined, an SCA runtime MUST enable the default transport~~
527 ~~binding rules. [BWS40005]~~

528 ~~When using the default transport binding rules, the SCA runtime MAY provide additional~~
529 ~~WSDL bindings, unless policy is applied that explicitly restricts this.~~~~When using the~~
530 ~~default transport binding rules, the SCA runtime MAY provide additional WSDL bindings,~~
531 ~~unless policy is applied that explicitly restricts this. [BWS40006]~~

532 ~~When using the default transport binding rules with the rpc-literal pattern, the SCA~~
533 ~~runtime SHOULD use the structural URI associated with the binding as the namespace of~~
534 ~~the child elements of the SOAP body element.~~~~When using the default transport binding~~
535 ~~rules with the rpc-literal pattern, the SCA runtime SHOULD use the structural URI~~
536 ~~associated with the binding as the namespace of the child elements of the SOAP body~~
537 ~~element. [BWS40007]~~

538 5 Conformance

539 The XML schema pointed to by the RDDL document at the namespace URI, defined by
540 this specification, are considered to be authoritative and take precedence over the XML
541 schema defined in the appendix of this document.

542 There are two categories of artifacts for which this specification defines conformance:

- 543 a) SCA WS Binding XML Document
- 544 b) SCA Runtime

545 5.1 SCA WS Binding XML Document

546 An SCA WS Binding XML document is an SCA Composite Document, or an SCA
547 ComponentType Document, as defined by the SCA Assembly specification Section 13.1
548 **[SCA-Assembly]**, that uses the <binding.ws> element.

549 An SCA WS Binding XML document **MUST** be a conformant SCA Composite Document or
550 a SCA ComponentType Document, as defined by the SCA Assembly specification **[SCA-**
551 **Assembly]**, and **MUST** comply with all statements in Appendix B: Conformance Items
552 related to elements and attributes in an SCA WS Binding XML document, notably all
553 "MUST" statements have to be implemented.

554 5.2 SCA Runtime

555 An implementation that claims to conform to the requirements of an SCA Runtime
556 defined in this specification has to meet the following conditions:

- 557 1. The implementation **MUST** comply with all statements in Appendix B:
558 Conformance Items related to an SCA Runtime, notably all "MUST" statements
559 have to be implemented.
- 560 2. The implementation **MUST** conform to the SCA Assembly Model Specification
561 Version 1.1 **[SCA-Assembly]**, and to the SCA Policy Framework Version 1.1
562 **[SCA-Policy]**.
- 563 3. The implementation **MUST** reject a SCA WS Binding XML Document that is not
564 conformant per Section 5.1.

565

A. Web Services XML Binding Schema: sca-binding-webservice.xsd

566

613

B. Conformance Items

614 This section contains a list of conformance items for the SCA Web Service Binding specification.

Conformance ID	Description
[BWS20001] [BWS20004]	For an SCA reference, the @uri attribute MUST be an absolute value.
[BWS20002]	The value of the @wsdlElement attribute MUST identify an element in an existing WSDL 1.1 document.
[BWS20003]	If the binding is for an SCA service, the wsdlElement attribute MUST NOT specify the wsdl.service form of URI.
[BWS20004]	If the wsdl.service form of wsdlElement is used on an SCA reference binding, the set of available ports for the reference MUST contain at least one port.
[BWS20005] [BWS20006]	If the wsdl.service form of wsdlElement is used on an SCA reference binding, the SCA runtime MUST raise an error if there are no available ports that it supports.
[BWS20006]	When an invocation is made using an SCA reference binding with the wsdl.service form of wsdlElement, the SCA runtime MUST use exactly one port from the set of available ports for the reference (with port selection on a per-invocation basis permitted).
[BWS20007] [BWS20007]	If the binding is for an SCA service, the portType associated with the specified WSDL port MUST be compatible with the SCA service interface as defined in section 2.1, and the port MUST satisfy all the policy constraints of the binding.
[BWS20008]	The SCA runtime MUST expose an endpoint for the specified WSDL port, or raise an error if it does not support the WSDL port.
[BWS20009]	If the binding is for an SCA reference, the portType associated with the specified WSDL port MUST be a compatible superset of the SCA reference interface as defined in the SCA Assembly Model specification [SCA-Assembly] [SCA-Assembly] , and the port MUST satisfy all the policy constraints of the binding.
[BWS20010]	The SCA runtime MUST use the specified WSDL port for invocations made using the SCA reference, or raise an error if it does not support the WSDL port.
[BWS20011]	If the binding is for an SCA service, the portType associated with the specified WSDL binding MUST be compatible with the SCA service interface as defined in section 2.1, and the WSDL binding MUST satisfy all the policy constraints of the binding.
[BWS20012]	The SCA runtime MUST expose an endpoint for the specified WSDL binding, or raise an error if it does not support the WSDL binding.
[BWS20013]	If the binding is for an SCA reference, the portType associated with the specified WSDL binding MUST be a compatible superset of the SCA reference interface as defined in the SCA Assembly Model specification [SCA-Assembly] [SCA-Assembly] , and the WSDL binding MUST satisfy all the policy constraints of the binding.

Formatted: Highlight

Formatted: Highlight

[BWS20014]	The SCA runtime MUST use the specified WSDL binding for invocations made using the SCA reference, or raise an error if it does not support the WSDL binding.
[BWS20015]	When the <i>wSDL.binding</i> form of <i>wSDL.Element</i> is used, the endpoint address URI for an SCA reference MUST be specified by either the <i>@uri</i> attribute on the binding or a WS-Addressing <i>EndpointReference</i> element, except where the SCA Assembly Model specification [SCA-Assembly][SCA-Assembly] states that the <i>@uri</i> attribute can be omitted.
[BWS20016]	The <i>@wsdl:wsdlLocation</i> attribute MAY be specified by the binding in the event that the <i><WSDL-namespace-URI></i> in the 'endpoint' attribute is not dereferencable, or when the intended WSDL document is to be found at a different location than the one pointed to by the <i><WSDL-namespace-URI></i> .
[BWS20017]	If the <i>@wsdl:wsdlLocation</i> attribute is used the <i>@wSDL.Element</i> attribute MUST also be specified.
[BWS20018]	The value of the <i>@wsdl:wsdlLocation</i> attribute MUST identify an existing WSDL 1.1 document.
[BWS20019]	A <i>binding.ws</i> element MUST NOT contain more than one of any of the following: the <i>@uri</i> attribute; the <i>@wSDL.Element</i> attribute referring to a WSDL port or to a WSDL service; the <i>endpointReference</i> element.
[BWS20020]	For the <i>callback</i> element of an SCA service, the binding MUST NOT specify an endpoint address URI or a WS-Addressing <i>EndpointReference</i> .
[BWS20021]	The SCA runtime MUST support all the attributes of the <i><binding.ws></i> element, namely <i>@name</i> , <i>@uri</i> , <i>@requires</i> , <i>@policySets</i> , <i>@wSDL.Element</i> , and <i>@wsdl:wsdlLocation</i> .
[BWS20022]	The SCA runtime SHOULD support the element <i><endpointReference></i> .
[BWS20023]	If an SCA runtime does not support the element <i><endpointReference></i> , then it MUST reject an SCA WS Binding XML document (as defined in Section 5.1) that contains the element.
[BWS20024]	The <i><binding.ws></i> element MUST conform to the XML schema defined in <i>sca-binding-webservice.xsd</i> .
[BWS20025]	If there is no target address for a reference binding, the SCA runtime MUST raise an error.
[BWS20026]	For a reference binding, the SCA runtime MUST use the target address.
[BWS20027]	When <i>binding.ws</i> is used on a service or reference with an interface that is not defined by <i>interface.wSDL</i> , the SCA runtime MUST derive a WSDL <i>portType</i> for the service or reference from the interface using the rules defined for that SCA interface type.
[BWS20028]	An SCA runtime MUST raise an error if the interface on a service or reference element with a <i>binding.ws</i> element does not map to a WSDL <i>portType</i> .
[BWS20029]	Any service hosted by an SCA runtime with one or more web service bindings with HTTP endpoints SHOULD return a WSDL description of the service in response to an HTTP GET request with the "?wsdl!" suffix to that HTTP endpoint.
[BWS20030]	If none of the web service bindings for an SCA service have HTTP endpoints, then the SCA runtime SHOULD provide some other means of obtaining the

Formatted: Highlight

	WSDL description of the service.
[BWS20034]	SCA runtime implementations MAY provide additional metadata that is associated with a web service binding.
[BWS20032]	An SCA runtime MUST support the WSDL extensions defined in the namespace associated with the prefix "sca" (as defined in section 1.1).
[BWS20033]	The SCA runtime MUST support the WSDL 1.1 binding extension for SOAP 1.1 over HTTP [WSDL11] [WSDL11] , as identified by the WSDL element wsoap11:binding that has the @transport attribute with a value of "http://schemas.xmlsoap.org/soap/http".
[BWS20034]	The SCA runtime SHOULD support the WSDL 1.1 binding extension for SOAP 1.2 over HTTP [W11-SOAP12] [W11-SOAP12] , as identified by the WSDL element wsoap12:binding that has the @transport attribute with a value of "http://schemas.xmlsoap.org/soap/http".
[BWS20035]	The <bindingType> element associated with this binding MUST include the SOAP.1_1 intent in its @mayProvides or @alwaysProvides attributes.
[BWS20036]	The <bindingType> element associated with this binding SHOULD include the SOAP.1_2 intent in its @mayProvides attribute.
[BWS20037]	The SCA runtime MUST raise an error if a web service binding is configured with a policy intent(s) that conflicts with the binding instance's configuration.
[BWS40001]	When the SOAP intent is required, the SCA runtime MUST transmit and receive messages using SOAP. One or more SOAP versions can be used.
[BWS40002]	When the SOAP.1_1 intent is required, the SCA runtime MUST transmit and receive messages using only SOAP 1.1.
[BWS40003]	When the SOAP.1_2 intent is required, the SCA runtime MUST transmit and receive messages using only SOAP 1.2.
[BWS40004]	For an SCA service or reference element, the portType from the service's or reference's interface or derived from that interface MUST follow either the rpc-literal pattern or the document-literal pattern.
[BWS40005]	In the event that the transport details are not otherwise determined, an SCA runtime MUST enable the default transport binding rules.
[BWS40006]	When using the default transport binding rules, the SCA runtime MAY provide additional WSDL bindings, unless policy is applied that explicitly restricts this.
[BWS40007]	When using the default transport binding rules with the rpc-literal pattern, the SCA runtime SHOULD use the structural URI associated with the binding as the namespace of the child elements of the SOAP body element.

C. Appendix – WSDL Generation

616

617

618

619

620

Due to the number of factors that determine how a WSDL might be generated, including compatibility with existing WSDL uses, precise details cannot be specified. For example, implementation decisions can affect the way WSDL might be generated. For reference, and consistency, this section suggests non-normative choices for some of the various details involved in generating WSDL. For brevity, the following definitions apply:

621

622

- component name = the value of the @name attribute of the component element containing the binding.ws element

623

624

- service name = the value of the @name attribute of the service element containing the binding.ws element

625

626

- binding name = the value of @name attribute of the binding.ws element, or the default if no @name attribute is present

627

- SOAP version = either "SOAP11" or "SOAP12" as appropriate

628

With those definitions in place, here are the suggested choices:

629

- wsdl:definitions/@name = <component name> + "." + <service name>

630

- wsdl:definitions/@targetNamespace = <structural URI for the service>

631

- import each WSDL 1.1 portType, rather than putting them inline

632

- wsdl:binding/@name = <binding name> + <SOAP version> + "Binding"

633

- wsdl:service/@name = <service name>

634

- wsdl:port/@name = <binding name> + <SOAP version> + "Port"

635

D. Acknowledgements

636 The following individuals have participated in the creation of this specification and are gratefully
637 acknowledged:

E. Revision History

641 [optional; should not be included in OASIS Standards]

Revision	Date	Editor	Changes Made
1	2007-09-25	Anish Karmarkar	Applied the OASIS template + related changes to the Submission
2	2008-04-02	Anish Karmarkar	<ul style="list-style-type: none"> * Partially applied the resolution of issue 14 in the conformance section. * Applied resolution to issue 9. * Applied resolution to issue 15. * Applied resolution to issue 16. * Applied resolution to issue 10. * Applied resolution to issue 8. * Applied resolution to issue 3.
3	2008-06-12	Simon Holdsworth	<ul style="list-style-type: none"> * Completed application of resolution to issue 10 * Applied most of the editorial changes from Eric Johnson's review
4	2008-08-13	Anish Karmarkar	<ul style="list-style-type: none"> * Applied rest of Eric Johnson's ed review comments. * Applied resolution of issue 13. * Reapplied resolution of issue 15 (it was not applied correctly before) * Applied resolution of issue 19. * Applied resolution of issue 30. * Applied resolution of issue 32. * Applied resolution of issue 36. * Applied resolution of issue 38.
cd01-rev1	2008-10-16	Simon Holdsworth	Applied resolution of issue 41.
cd01-rev2	2008-10-20	Anish Karmarkar	Added rfc2119 statements.
cd01-rev3	2008-11-19	Anish Karmarkar	Incorporated feedback from Bryan, Eric & Dave
cd01-rev3	2008-12-02	Anish Karmarkar	Removed 'required' word associated with description of pseudo-schema + changed section 2.6 (wsdl extensibility) per the TC decision. Both of these were associated with issue 51 (2119 stmts)
cd01-rev5	2009-02-06	Simon Holdsworth	<ul style="list-style-type: none"> Applied resolution of issue 11 Applied resolution of issue 49 Applied action item 20080904-1
cd02	2009-02-16	Simon Holdsworth	Renamed, applied editorial issues

cd02-rev1	2009-06-02	Anish Karmarkar	<ul style="list-style-type: none"> * Applied resolution of issue 61 by using the document at http://www.oasis-open.org/apps/org/workgroup/sca-bindings/download.php/32160/sca-binding-ws-1.1-spec-cd02-issue61-rev3.doc as the base document. * Updated NS URI (Applied action item 20090311-2). * Updated Copyright statement in various places. * Updated schema per http://lists.oasis-open.org/archives/sca-bindings/200903/msg00057.html (Applied action item 20090312-1). * Applied resolution of issue 23, 25, 43, 54, 55, 64. * Replaced 3 occurrences of 'required' with 'specified'. * Recreated all bookmarks, cross-references, and conformance item table.
cd02-rev2	2009-06-09	Anish Karmarkar	Ed. fixes. Changed the way the crossrefs/bookmarks for RFC2119 keywords work. Fixed a few references.
cd02-rev3	2009-06-11	Anish Karmarkar	<ul style="list-style-type: none"> * Removed ':' from 40005, reformatted 40006/40007. * minor ed changes pointed out by SimonN. * minor formatting changes. * modified BWS20018 to remove the first sentence.
cd02-rev4	2009-06-17	Anish Karmarkar	<ul style="list-style-type: none"> * Not fixed in this rev, but issue 57 resolution was applied in previous rev. * Added list of participants in the Ack section. * Ed changes pointed out by Eric.
cd02-rev5	2009-06-22	Anish Karmarkar	* Port of the fix made in JMS/JCA binding for issues 74/75. Specifically SCA WS Binding XML document requirements were made less vague (by referring to attributes/elements)
cd02-rev6	2009-06-24	Anish Karmarkar	<ul style="list-style-type: none"> * Applied resolution of issue 76, 79, 82. * Some very minor ed changes. * Reverted the document naming scheme to the old scheme.
