## 42 1 Introduction

43 The purpose of this document is to describe use-cases to demonstrate the Key Management  
44 Interoperability Protocol (KMIP) **[KMIP-Spec]**. The use-cases indicate if all concepts within the protocol  
45 are sound and if the protocol is usable when implementing typical scenarios in real life. These use-cases  
46 are not intended to fully test an implementation of KMIP. Thus, the use-cases do not contain typical  
47 Quality Assurance scenarios which would stress an implementation. The use-cases are based on v1.0 of  
48 the protocol.

49  
50 The use-cases define a number of client-to-server request-response pairs for a number of operations. For  
51 each request-response message pair the operation is stated, along with the relevant parameters needed  
52 for the request or response message. This is followed by two different illustrations of the messages: first,  
53 a human-readable construction which shows the fields tags, types and values, followed by the TTLV-  
54 encoding of the message. These are included to facilitate the implementation of the message creation  
55 and parsing functionality. The use-cases show one possible way to construct the messages, and the  
56 messages shown are not necessarily the only correct constructions (e.g. it is possible to omit the attribute  
57 index if it is zero). Also note that many values change dynamically when running the use-cases (the  
58 server-generated timestamps, Unique Identifiers and key material in responses, as well as Batch Item ID  
59 values in client-generated requests).

60 In many situations in the use cases defined in this document, the server behavior depends on the server's  
61 policy. The illustrated message exchanges and their contents are not the only possible variants (see  
62 **[KMIP-Spec]**). E.g., the server response messages shown in this document correspond to a server policy  
63 of completely destroying a managed object, along with all of its attributes, when receiving a Destroy  
64 request.

65 Multiple use cases describe several clients operating on the same managed object(s). For this to work,  
66 the clients SHALL have authenticated themselves to the server using the same credentials (see **[KMIP-  
67 Prof]**). Alternatively, the server policy applied to the relevant managed object(s) SHALL be such that the  
68 clients all have access to the managed object(s) in question.

## 77 2 Message exchange

78 The message exchange between clients and the server to test the following use-case scenarios is  
79 performed with TTLV encoding over the TLS/SSL transport as defined in **[KMIP-Spec]** and **[KMIP-Prof]**.  
80

## 81 3 Centralized Management

### 82 3.1 Basic functionality

83 These use-cases test the basic features of KMIP including key creation, template and secret data  
84 registration, attribute functionality, access methods, and batch operation.

85

### 86 3.1.1 Use-case: Create / Destroy

87 In this use-case the client issues a Create request, whereby the server creates a new symmetric key and  
88 returns the Unique Identifier. To clean up, the client then performs a Destroy operation to destroy the key.

92 **3.1.2 Use-case: Register / Create / Get attributes / Destroy**

93 Here the client first registers a template object and then creates a symmetric key using the registered  
 94 template. To verify that the attributes of the key were set correctly from the template, the client then  
 95 issues a Get Attributes command, after which it destroys first the key and then the template.

99 **3.1.3 Use-case: Create / Locate / Get / Destroy**

100 This use-case tests the Locate and Get operations, in addition to the previously used operations Create  
 101 and Destroy. A symmetric key is first created, and then a lookup is performed on the Name attribute using  
 102 the Locate operation. Subsequently, a Get request is issued to retrieve the located key, after which the  
 103 key on the server is destroyed.

### 107 3.1.4 Use-case: Dual client use-case, ID Placeholder linked Locate & Get batch

108 This use-case has two clients performing operations on the same key. The first client initially registers a  
 109 template and creates a symmetric key using that template. The second client then does a batched Locate  
 110 and Get using the ID Placeholder to retrieve the key. The second client thereafter performs a number of  
 111 operations on the key (Get Attribute List, Get Attribute, Add Attribute, Modify Attribute and Delete  
 112 Attribute), before the first client finally destroys the key and the template. The first client also tries to Get  
 113 the key and the template after they have been destroyed, but the Get operation fails in both cases.

114  
 115 This use-case demonstrates the fact that it is possible for two clients to cooperate and use the same  
 116 managed object while only having knowledge of a single pre-agreed Name attribute value and without  
 117 having to share any other information.

120 **3.1.5 Use-case: Register / Destroy Secret Data**

121 In this use-case the client issues a Register request containing a Secret Data object, whereby the server  
 122 registers the object and returns the Unique Identifier. To clean up, the client then performs a Destroy  
 123 operation to destroy the object.

127 **3.2 Use-case: Asynchronous Locate**

128 This use-case tests the asynchronous capabilities of KMIP using the Locate operation. A key is created  
129 and then a Locate request is sent containing the Name of the created key and with the message header  
130 Asynchronous Indicator-field set to True. If the server returns an asynchronous response to the Locate,  
131 the client then polls the server until the operation is ready. If the server responded asynchronously, a  
132 subsequent Locate operation that is also handled asynchronously is then Cancelled, before the key is  
133 finally destroyed.

134

135 This use-case shows the use of two clients with the same assumptions as in the use-case described in  
 136 Section 3.1.4 Since the client is unable to force the server to respond asynchronously, it is possible for a  
 137 server to respond synchronously to the requests issued at times 1 and 4, in which case the expected  
 138 response are the ones shown at times 2 and 5, respectively. In the case of the server not responding  
 139 asynchronously to the Locate requests, the client is permitted to skip the requests illustrated at time 7 and  
 140 8.

## 145 4 Key life cycle support

146

147 **4.1 Use-case: Revoke scenario**

148 This use-case tests the revocation aspect of the key life cycle support in KMIP. A key is created and a  
 149 Get Attribute for the State-attribute reveals that the key is in Pre-active state. The Activation Date is then  
 150 set, which changes the state to Active. The key is then revoked with a revocation reason of Compromised  
 151 and the state subsequently changed to Compromised, but this does not stop a client from being able to  
 152 add, modify and delete attributes or even get the key (since we assume here that the out-of-band  
 153 registration has been used to make the server aware of the fact that the client is capable of interpreting  
 154 the attributes of the key and determining what it is allowed to do with the key). To clean up, the created  
 155 key is finally destroyed.

## 5 Auditing and reporting

### 5.1 Use-case: Get usage allocation scenario

This use-case tests the usage management functionality of KMIP. A key is created and the Activation Date and Protect Stop Date attributes are set in such a way as to allow the Get Usage Allocation operation to be performed. The value of the Usage Limits attribute is set to 1000 bytes, and two subsequent requests for 500 bytes succeed (one of them also verifying the amount that can be received using the Check operation), while a third fails since the usage allocation has been used up. The key is finally revoked and destroyed. This use-case shows the use of multiple clients with the assumptions regarding the clients being the same as in the use-case described in Section 3.1.4

## 172 6 Key Interchange, Key Exchange

173

### 174 6.1 Use-case: Import of a Third-party Key

175

176 This use-case tests the import of a foreign key using the Register operation. To validate that the  
177 registered key is treated the same as a locally created key, an attribute is added to the key and then  
178 modified. Finally, the key is destroyed.

183 **7 Vendor Extensions**

184 These use-cases test the handling of unknown message extensions with vendor-specific content.

185

186 **7.1 Use-case: Unrecognized Message Extension with Criticality Indicator**  
 187 **false**

188 A create request is issued and the request contains a Message Extension with the Criticality Indicator set  
 189 to false. The server does not understand the extension, but since it is non-critical, the create request is  
 190 processed normally. Subsequently, the created key is deleted.

## 8 Asymmetric keys

204

205

Creation of keys using “Create Key Pair” operation, locating pair using Link attribute.

206

### 8.1 Use-case: Create a Key Pair

207

Create a new private/public key pair. Make sure they are linked correctly by issuing Locate commands with the assigned Unique Identifiers. Finally delete both key halves.

211 **8.2 Use-case: Register Both Halves of a Key Pair**

212 Register a private key and a public key and set the Link attribute to point to each other. Verify the links  
 213 were set correctly by locating the keys based on the link attributes, and then delete both objects.

## 217 9 Key Roll-over

218

219 These use-cases test manual key roll-over using the “Re-key” operation. In particular, they test the  
220 formatting of the Re-key command, the handling and server-side processing of the various Time  
221 attributes and the setting of some other attributes that are not automatically copied from the existing key  
222 to the new key.

### 223 9.1 Use-case: Create a Key, Re-key

224 Create a symmetric key with a specific name, and then use Locate to find the key. After using Re-key to  
225 create a new key, verify that the name was removed from the existing key and copied to the new key.  
226 Also verify that the key material for the old key is still retrievable. To clean up, both keys are deleted.

## 230 9.2 Use-case: Existing Key Expired, Re-key with Same lifecycle

231 Create a new symmetric key. Then add the *Activation Date* and *Deactivation Date* attributes based on the  
232 timestamp in the response to the Create request. The *Activation Date* is set to a time in the past and the  
233 *Deactivation Date* to a time in the near future. Repeated Get Attribute calls are performed to verify that  
234 the state is first “Active”, then subsequently “Deactivated”. Then issue a Re-key request, including an  
235 *Activation Date* attribute with the value set to the previously specified *Deactivation Date* of the existing  
236 key. Verify from the response that the *Activation Date* and *Deactivation Date* attributes were set correctly  
237 (if they are not returned, issue a Get Attribute request). Do a Get Attribute operation to verify that the  
238 state of the new key is “Active”. To clean up, both keys are deleted.

241 **9.3 Use-case: Existing Key Compromised, Re-key with same lifecycle**

242 Create a new symmetric key with the *Activation Date* in the past. Do a Get Attribute operation on the

243 State attribute to verify the key is “Active”. Then revoke the key as compromised, verify that the state has

244 changed to “Compromised”. Create a replacement key using Re-key with the offset set to ‘0’ to indicate

245 that the times are to be copied from the existing key. Do a Get Attribute operation to verify that the state

246 of the new key is “Active”. To clean up, both keys are deleted.

## 250 9.4 Use-case: Create key, Re-key with new lifecycle

251 Create a symmetric key with a specific name, then use Locate to find the key. After using Re-key to  
252 create a new key, verify that the name was removed from the existing key and copied to the new key. To  
253 clean up, both keys are deleted.

257 **9.5 Use-case: Obtain Lease for Expired Key**

258 Create a symmetric key with a specific name and obtain a lease. Revoke the key with state  
259 "Compromised" and re-key the key. Try to obtain a lease on the old key which fails. Locate the new key  
260 with the original name. Get the new key and obtain a lease.

## 263 10 Archival

264

265 These use-cases test archiving and locating keys using the off-line indicator. If the server performs the  
266 Archive and Recover operations asynchronously, the client Polls the server until the operations complete.  
267 The client indicates in the request that it supports asynchronous responses.

### 268 10.1 Use-case: Create a Key, Archive and Recover it

269 Create a symmetric key with a specified name, then use Locate to find the key and get the key. Archive  
270 the key (asynchronous operation, use Poll until it completes) and use Get and Locate on it, but both fail.  
271 Add the Storage Status Mask to the Locate-command, indicating to the server to search in both online  
272 and archived storage. The Locate finds the key. Recover the key from the archive (also asynchronous),  
273 both Locate and Get succeed.

## 277 11 Access Control, Policies

278  
279

These use-cases test attributes and objects related to access control and server policy.

### 280 11.1 Use-case: Credential, Operation Policy, Destroy Date

281 Pass a Credential object in the message header in all requests for identification purposes (how the  
282 Credential object is used is defined in [KMIP-Prof]). Create a symmetric key and set the Operation Policy  
283 Name attribute to “default”. Using another Credential, attempt to perform a Get operation batched with a  
284 Get Attribute List on the created symmetric key – according to the Default Operation Policy, both these  
285 request SHALL fail, and with the Batch Error Continuation Option set to “Continue”, the client SHALL also  
286 receive both response payloads. Using the initially used Credential, destroy the object and get the  
287 Destroy Date attribute.

288 The message exchanges in this use case are based on a certain server policy (e.g. handling of  
289 Credentials) that in some aspects differs from the policy assumed in earlier use cases (e.g. in this use  
290 case, the Destroy Date is retained). As mentioned in Section 1 , the message exchanges shown in this  
291 document are not the only correct alternatives.

## 295 12 Query, Maximum Response Size

296

297 This use case tests the Query operation and the Maximum Response Size header field.

### 298 12.1 Use-case: Query, Maximum Response Size

299 Perform a Query operation, querying the Operations and Objects supported by the server, with a  
300 restriction on the Maximum Response Size set in the request header. Since the resulting Query response  
301 is too big, an error is returned. Increase the Maximum Response Size, resubmit the Query request, and  
302 get a successful response.

## 402 B. Revision History

Revision	Date	Editor	Changes Made
ed-0.98	2009-04-28	Mathias Björkqvist	Initial conversion of input document to OASIS format.
ed-0.98	2009-08-06	Mathias Björkqvist	Changes to layout and message content to reflect the recent changes to the KMIP specification, added descriptions to the use-cases for which they were missing.
ed-0.98	2009-09-28	Mathias Björkqvist	Updated messages and TTLV encodings to conform with KMIP specification ed-0.98 rev 17.
draft-01	2009-10-08	Mathias Björkqvist	Removed normative words “must”, “shall”, “required”, “will” and “can”; updated messages and TTLV encodings to conform to KMIP specification ed-0.98 rev 19; added

			normative references; added minor edits
draft-02	2009-10-15	Mathias Björkqvist	Replaced the TBDs, changed status to Committee Draft, changed use-cases to use protocol major version 1 and minor version 0
draft-03	2009-10-15	Mathias Björkqvist	Corrected names of TC chairs
draft-04	2009-11-05	Mathias Björkqvist	Added list of participants, added reference to Profiles document, line spacing change to list of original contributors, added related documents
cd-05	2009-11-06	Mathias Björkqvist	Changes to various naming aspects on front page and document footer. This is the tentative version for public review.
cd-06	2009-11-12	Mathias Björkqvist	Updated tags.
cd-07	2010-02-17	Mathias Björkqvist	Addressed public review comments, added line numbering.
cd-08	2010-03-17	Mathias Björkqvist	Registration of Templates changed to use the Template object, Usage Allocation changes (Add Attribute, Check, Get Usage Allocation), batched Revoke requests with Destroy requests when destroying objects in the Active state, adopted new format for Username and Password Credential object.
cd-09	2010-03-18	Mathias Björkqvist	Updated participants' list. Editorial fixes.
