

Agenda

Extension management
Version negotiation
IANA ports
Profile scope
Introduction on interop proposal

Tim H moves agenda, Rod seconds.

Meeting minutes approval has been deferred

IANA ports

Motion to authorize OASIS to move forward and request IANA to assign ports for KMIP client and server communication using the document that has been sent by Alan F to the reflector this morning with the proviso that he can update the document to make minor edits.

Krishna moves, Bob L seconds.

Any discussion/objections? Hearing none motion is carried.

Interop

Discuss Gordon's proposal during next week's interop call.

Profile scope

Bob L

Simplify capability negotiation – we don't require a server to have a server fully conform with a profile.

Bob G to bring forth an updated profile template for next week.

Extension management

Tim Hudson

Bob L: we need a registry for vendor extensions

Bob N: Being a registrar is difficult. How does a small committee with no permanence assurances be a registrar? Can we get OASIS to do it? Each vendor can have a range. EIN for IANA

Bob L: bind URIs to namespace

Bob G: how to carry this forward?

TH: like to get feedback – need to tackle it with some urgency for 1.1.

Bob G: let us plan to discuss further next week; to see if we can start crafting a proposal next wk.

Bruce R: a tag value => name mapping. Going to create problems with custom attributes.

AI for Bob N: draft a writeup regarding what T10 and T11

Versioning

Suddenly, we are introducing the notion of "session"; because if a client negotiates this as part of its handshake, the server has to remember it for some duration of a session (Today, the KMIP protocol is stateless, so no notion of a session exists). Don't see the value for adding the notion of a session. Let us continue the conversation over the reflector and look at this item next week again.
