DITA Adoption Process: Roles, Responsibilities, and Skills

As an organization investigates moving to a Darwin Information Typing Architecture (DITA) writing environment, new roles, responsibilities, and skills must be identified. We highly suggest that you consider a resource strategy at the same time that you consider a content strategy. We have identified several roles that are required for a successful DITA implementation. As you progress through your DITA implementation, the number and types of roles might change. The roles required during the investigation phase are significantly different than the roles required for a fully established DITA environment.

As you develop your resource strategy, consider these guidelines:

• One or more individuals might assume responsibilities for a single role.
• One individual might assume responsibility for one or more roles.
• Individuals might change roles as your organization progresses through the phases of implementation.
• The responsibilities for a role might change slightly as your organization progresses through the phases of implementation.

The table in *DITA Roles, Responsibilities, and Skills* summarizes each role.

**Table 1: Suggested Roles During the Phases of DITA Implementation**

The different phases of a DITA implementation and the suggested roles for each implementation phase.

**Investigation Phase**

As an organization investigates moving to a DITA writing environment, many facets of the investigation require new roles and responsibilities. The investigation phase is when you gather information that lets you accurately estimate, plan, and build your business case for the subsequent phases.
### Content Management Specialist
This individual investigates the different options for managing content. This individual works with Component Content Management System (CCMS) vendors to develop a solution for the organization.

### Conversion Specialist
Moving legacy content to DITA requires a deep understanding of the conversion process. This individual investigates the options for converting content. Conversion options range from manually converting content in-house to using tools that automate the process to contracting with vendors who perform the conversion.

### Information Architect/Content Strategist
This individual understands the current content life cycle. This individual is very familiar with the organization’s content and is a visionary who sees the potential for content reuse and the benefit of metadata.

### Lead Authors
These individuals provide feedback on the tools and the workflow that are associated with a DITA writing environment.

### Project Manager
Because the move to a DITA writing environment can be a difficult transition, this individual provides direction and accountability to the team as it investigates the move. This individual tracks schedules and work assignments and starts a budget for the investigation team.

### Publishing Expert
This individual understands the various publishing tools that are available to support DITA source content and understands DITA. This individual develops and maintains templates.

### Sponsor
Each organization requires a management sponsor or champion to support the move to a DITA writing environment. This individual is a visionary who understands the benefits and the costs of moving to a DITA environment at a high level and can understand the opportunities for the enterprise adoption possibilities as well, including, but not limited to, training and marketing.

### Translation Manager (optional)
If an organization translates content (or wants to translate content in the future), including this individual in the investigation phase is an important part of developing a complete and efficient long-term content strategy (particularly, although not limited to, tool selection).

### User Experience Designer
During the investigation phase, this individual performs preliminary investigation to determine requirements and to identify possible solutions for delivering the content to users.

## Selling Phase
After an organization decides to move to a DITA writing environment, several individuals must sell the idea to upper-level management and key stakeholders (such as IT). The individuals in this phase rely on the information gathered from the individuals involved in the investigation phase.
Information Architect/Content Strategist

This individual is very familiar with the organization’s content and is a strategist who sees the potential for content reuse and the benefit of metadata. This individual understands and can clearly communicate the benefits of a DITA writing environment to executives and other key stakeholders who do not necessarily understand XML or legacy content processes or inefficiencies.

Sponsor

This individual is the liaison between upper-level management and the investigation team. This individual understands the tools required, the changes to work environment, and the effort required for a successful DITA implementation. This individual understands the benefits and the costs of moving to a DITA writing environment.

Pilot Phase

After an organization receives approval and funding to move to a DITA writing environment, many individuals must work together to develop tools, procedures, and processes for the new environment. A successful pilot phase relies on the information gathered from the individuals involved in the investigation phase.

Content Management Specialist

This individual understands the DITA architecture. If a CCMS is used, this individual defines the CCMS requirements and drives the vendor selection and CCMS pilot processes.

Conversion Specialist

This individual performs the initial conversion for the pilot project, working in collaboration with the Information Architect/Content Strategist, the Content Management Specialist, and the Publishing Expert to preserve and add any vital metadata and to conform to the DITA model identified in the content strategy. The initial converted content is used in multiple ways: to test and refine the content strategy, to provide actual samples during the tool selection and customization process, and to provide working samples for the Publishing Expert to start creating documents for delivery.

Information Architect/Content Strategist

This individual looks for opportunities to enhance existing content, to automate processes, and to improve existing tools. This individual determines the best practices for single sourcing and the best practices for leveraging metadata. This individual has a deep knowledge of DITA architecture, including the need to develop specializations. This individual works closely with the Publishing Expert and the Content Management Specialist to develop and maintain the tools used by the organization.

Lead Authors

As an organization starts moving to a DITA writing environment, Lead Authors work with pilot content and begin to establish writing guidelines and production processes. In the pilot phase, these individuals work closely with all other roles to identify and rectify gaps or errors in the strategies, tools, or processes.
Project Manager
This individual drives the pilot and makes sure that all components are developed on time and that all risks are appropriately managed. This individual ensures that all vital facets of the pilot are completed in order and on time. The Project Manager also ensures that the lines of communication remain open between all stakeholders within the pilot phase as well as communication with the rest of the company.

Publishing Expert
This individual works closely with the Information Architect/Content Strategist and the Content Management Specialist to develop and maintain the chosen means of publishing XML files used by the organization for one or two output types. This individual drives the publishing process and identifies specific publishing tool requirements.

Sponsor
This individual is the liaison between upper-level management and the pilot team. The Sponsor’s role during the pilot phase is to keep the pilot from being canceled before it can be completed and to address the wider concerns that the enterprise might have.

Technical Editor
This individual provides input, helps create the editing workflows, and develops a style guide that includes DITA markup guidelines, grammar and writing style guidelines, and topic-based writing guidelines.

Trainer
This individual works closely with all persons responsible for the pilot phase. The Trainer develops training materials and curriculum based on the procedures and processes developed during the pilot phase. This individual must be familiar with all tools and processes used in the DITA writing environment.

Translation Manager
If translation is a requirement, this individual starts to develop a work strategy for managing the core language and all required translated languages.

User Experience Designer
This individual uses the pilot phase to develop the user experience of content, develop use cases and scenarios, create wireframes, list functional requirements, and interview and test all stakeholders, but focuses on internal and external end users.

Adoption Phase
A successful pilot phase leads to a roll-out or phased roll-out of the DITA solution to one or more teams in the company: the adoption phase. All individuals involved in the pilot phase act as mentors to the entire team during the adoption phase. The adoption phase includes all roles.

Authors
These individuals receive training and begin writing content in DITA, learning the tools and processes as they go.

Content Management Specialist
This individual manages and customizes all aspects of content management and the CCMS tools.
### Conversion Specialist
This individual continues to convert legacy material, as required.

### Information Architect/Content Strategist
This individual continues to develop best practices for single sourcing and best practices for using metadata.

### Lead Authors
These individuals help the Authors make the move to DITA adoption, as well as continuing to write new content and manage maps.

### Project Manager
This individual keeps all projects on track.

### Publishing Expert
This individual works closely with the Information Architect/Content Strategist and the Content Management Specialist to develop and maintain the chosen means of publishing XML files used by the organization for all remaining output types.

### Sponsor
This individual continues to act as the liaison between upper-level management and the writing team.

### Technical Editor
This individual ensures that all authors are using the DITA elements and attribute values consistently, that language and structure meet requirements for usability and clarity, and that all possible reuse is being employed.

### Trainer
This individual ensures that all authors acquire specific, task-oriented training on the tools, processes, and strategies determined in the pilot phase. The Trainer also provides ongoing training and support for all authors.

### Translation Manager
This individual starts the translation and localization of content to one or more languages and implements the entire process. The Translation Manager ensures quality translations and efficiently manages maps and topics in multiple languages.

### User Experience Designer
This individual continuously monitors metrics, search terms, findability, stale content, user feedback, and user experience. The User Experience Designer works in coordination with the Information Architect/Content Strategist and the Publishing Expert to prioritize improvements in the user experience and pass on information about content and product improvements from the end users.

---

### Established Phase
After the DITA adoption process is established, you must continually manage your content, implement enhancements, and fine-tune your tools, solutions, and processes.

### Authors
These individuals continue writing new content and updating existing content.

### Content Management Specialist
This individual manages and customizes all aspects of content management and the CCMS tools. The Content Management Specialist updates the CCMS tools and procedures with the current releases and new features.
Conversion Specialist
After the DITA project is established, this individual continues to convert any required legacy content, including converting content from other departments.

Information Architect/Content Strategist
This individual stays current with industry trends and new areas of thought. This individual determines new requirements, modifies the strategy, and attempts to streamline all processes.

Lead Authors
These individuals continue writing new content and updating existing content.

Publishing Expert
This individual stays current with industry trends and new areas of thought. This individual develops and maintains all means of publishing XML files used by the organization for all output types. The Publishing Expert updates the publishing tools and procedures with the current releases and new features.

Technical Editor
This individual ensures that all authors are using elements and attribute values consistently, that language and structure meet requirements for usability and clarity, and that all possible reuse is being employed.

Trainer
This individual develops and updates training material and ensures that all Authors receive training in tool changes, new features, and process changes.

Translation Manager
This individual manages ongoing translations to all required languages.

User Experience Designer
This individual monitors the user experience including search terms, findability, and metrics. The User Experience Designer recommends changes to the design and experience of content and updates the user experience as required by the users.

### DITA Roles, Responsibilities, and Skills
