The OASIS TOSCA TC works to enhance the portability of cloud applications and services. TOSCA will enable the interoperable description of application and infrastructure cloud services, the relationships between parts of the service, and the operational behavior of these services (e.g., deploy, patch, shutdown)—independent of the supplier creating the service, and any particular cloud provider or hosting technology. TOSCA will also make it possible for higher-level operational behavior to be associated with cloud infrastructure management.

"As we live in the more complex and connected world, the industry realized the need for a standards-based approach to service and application portability and lifecycle management.

It’s gratifying to see the widespread and still growing adoption and support from both commercial solution providers and the open source community that TOSCA now enjoys."

— Paul Lipton of CA Technologies, co-chair of the OASIS TOSCA TC

The OASIS TOSCA TC works to enhance the portability of cloud applications and services. TOSCA will enable the interoperable description of application and infrastructure cloud services, the relationships between parts of the service, and the operational behavior of these services (e.g., deploy, patch, shutdown)—independent of the supplier creating the service, and any particular cloud provider or hosting technology. TOSCA will also make it possible for higher-level operational behavior to be associated with cloud infrastructure management.

TOSCA is part of the OASIS Open Standards Network. OASIS is an international consortium that brings companies, governments, academia, and individuals together to solve communications challenges. All are welcome to join and participate in the evolution of TOSCA.

If you are a software provider, implementer, or custom business software designer, you are invited to be part of TOSCA at OASIS.

As a member, you:

- influence the development of the TOSCA standard and other international standards
- ensure your requirements and use cases are taken into account
- engage with domain experts
- promote demand for compliant products
- form useful alliances for successful implementation and ongoing support

Business Value of TOSCA

The collective knowledge of application and infrastructure experts are captured as reusable TOSCA model

Members include:
- ASG Software Solutions
- CA Technologies
- Canonical Limited
- Cisco Systems
- Citrix Systems
- Cloudsoft Corporation Limited
- EMC
- Fujitsu Limited
- GigaSpaces Technologies
- Hewlett-Packard
- IBM
- Lucent-Alcatel
- NetApp
- Primeton Technologies, Inc.
- Red Hat
- SAP AG
- Software AG, Inc.
- VMware, Inc.
- Vmonic
- ...and many others

- Around the world, developers are turning to TOSCA to leverage their software applications across multiple cloud environments and implement truly open federated cloud services.”

—Simon Moser of IBM, co-chair of the OASIS TOSCA TC
