- Trey commented on Session 1: There had been agreement that use cases should be identified ahead of time, and aligned with co-sponsors
- Bret commented on Session 2: the conversation and use cases came about because they're problematic given how observed-data works now.
- Marlon question on TC changes: is there a plan to have CSD01 hosted on OASIS?
 - Bret answered that the documents are uploaded to Kavi
 - Chet will be publishing them via the OASIS process as a published document shortly.

- Bret will send out links after the call
- Jeff comment on use cases
 - Can we add TAXII to the use cases?
 - Discussion led to probably yes, for 1-2.
- Sean commented on UC2, which needs a new object (whois/DNS)
 - John mentioned there is a passive DNS object we could use. But let's just delete this.
- Marlon commented about public review
 - Bret explained the OASIS process, and that the precedent is that you do it before a CS. But, you can always send documents for review to people and they can comment via the list or github.
