# **OASIS SECURITY SERVICES TECHNICAL COMMITTEE**

## **SECURITY ASSERTIONS MARKUP LANGUAGE**

### **ISSUES LIST**

**VERSION 8**

**FEBRUARY 12, 2002**

**Hal Lockhart, Editor**

14

15 PURPOSE ..... 7

16 INTRODUCTION ..... 7

17 USE CASE ISSUES ..... 9

18     *Group 0: Document Format & Strategy*..... 9

19         CLOSED ISSUE:[UC-0-01:MergeUseCases] ..... 9

20         CLOSED ISSUE:[UC-0-02:Terminology] ..... 9

21         CLOSED ISSUE:[UC-0-03:Arrows] ..... 10

22     *Group 1: Single Sign-on Push and Pull Variations*..... 11

23         CLOSED ISSUE:[UC-1-01:Shibboleth] ..... 11

24         CLOSED ISSUE:[UC-1-02:ThirdParty] ..... 11

25         CLOSED ISSUE:[UC-1-03:ThirdPartyDoable] ..... 11

26         CLOSED ISSUE:[UC-1-04:ARundgrenPush] ..... 12

27         DEFERRED ISSUE:[UC-1-05:FirstContact] ..... 12

28         CLOSED ISSUE:[UC-1-06:Anonymity] ..... 12

29         CLOSED ISSUE:[UC-1-07:Pseudonymity] ..... 13

30         CLOSED ISSUE:[UC-1-08:AuthZAttrs] ..... 13

31         CLOSED ISSUE:[UC-1-09:AuthZDecisions] ..... 14

32         CLOSED ISSUE:[UC-1-10:UnknownParty] ..... 14

33         CLOSED ISSUE:[UC-1-11:AuthNEvents] ..... 14

34         CLOSED ISSUE:[UC-1-12:SignOnService] ..... 15

35         CLOSED ISSUE:[UC-1-13:ProxyModel] ..... 15

36         DEFERRED ISSUE:[UC-1-14: NoPassThruAuthnImpactsPEP2PDP] ..... 15

37     *Group 2: B2B Scenario Variations* ..... 17

38         CLOSED ISSUE:[UC-2-01:AddPolicyAssertions] ..... 17

39         CLOSED ISSUE:[UC-2-02:OutsourcedManagement] ..... 17

40         CLOSED ISSUE:[UC-2-03:ASP] ..... 18

41         DEFERRED ISSUE:[UC-2-05:EMarketplace] ..... 18

42         CLOSED ISSUE:[UC-2-06:EMarketplaceDifferentProtocol] ..... 18

43         CLOSED ISSUE:[UC-2-07:MultipleEMarketplace] ..... 19

44         CLOSED ISSUE:[UC-2-08:ebXML] ..... 19

45     *Group 3: Sessions*..... 20

46         DEFERRED ISSUE:[UC-3-01:UserSession] ..... 20

47         DEFERRED ISSUE:[UC-3-02:ConversationSession] ..... 20

48         DEFERRED ISSUE:[UC-3-03:Logout] ..... 21

49         DEFERRED ISSUE:[UC-3-05:SessionTermination] ..... 21

50         DEFERRED ISSUE:[UC-3-06:DestinationLogout] ..... 22

51         DEFERRED ISSUE:[UC-3-07:Logout Extent] ..... 22

52         DEFERRED ISSUE:[UC-3-08:DestinationSessionTermination] ..... 22

53         DEFERRED ISSUE:[UC-3-09:Destination-Time-In] ..... 23

54     *Group 4: Security Services*..... 24

55         CLOSED ISSUE:[UC-4-01:SecurityService] ..... 24

56         CLOSED ISSUE:[UC-4-02:AttributeAuthority] ..... 24

57         CLOSED ISSUE:[UC-4-03:PrivateKeyHost] ..... 24

58         CLOSED ISSUE:[UC-4-04:SecurityDiscover] ..... 25

59     *Group 5: AuthN Protocols*..... 26

60         CLOSED ISSUE:[UC-5-01:AuthNProtocol] ..... 26

61         DEFERRED ISSUE:[UC-5-02:SASL] ..... 26

62         CLOSED ISSUE:[UC-5-03:AuthNThrough] ..... 26

63     *Group 6: Protocol Bindings* ..... 28

64         CLOSED ISSUE:[UC-6-01:XMLProtocol] ..... 28

229 DOCUMENT HISTORY ..... 115

230

231

## 231 Purpose

232 This document catalogs issues for the Security Assertions Markup Language (SAML) developed  
233 the Oasis Security Services Technical Committee.

## 234 Introduction

235 The issues list presented here documents issues brought up in response to draft documents as  
236 well as other issues mentioned on the security-use and security mailing lists, in conference calls,  
237 and in other venues.

238 Each issue is formatted according to the proposal of David Orchard to the general committee:

239 ISSUE:[Document/Section Abbreviation-Issue Number: Short name] Issue long description.  
240 Possible resolutions, with optional editor resolution Decision

241 The issues are informally grouped according to general areas of concern. For this document, the  
242 "Issue Number" is given as "#-##", where the first number is the number of the issue group.

243 Issues on this list were initially captured from meetings of the Use Cases subcommittee or from  
244 the security-use mailing list. They were refined to a voteable form by issue champions within the  
245 subcommittee, reviewed for clarity, and then voted on by the subcommittee. To achieve a higher  
246 level of consensus, each issue required a 75% super-majority of votes to be resolved. Here, the  
247 75% number is of votes counted; abstentions or failure to vote by a subcommittee member did  
248 not affect the percentage.

249 At the second face-to-face meeting it was agreed to close all open issues relating to Use Cases  
250 and requirements accepting the findings of the sub committee, with the exception of issues that  
251 were specifically selected to remain open. This has been interpreted to mean that:

- 252 • Issues that received a consensus vote by the committee were settled as indicated.
- 253 • Issues that did not achieve consensus were settled by selecting the “do not add” option.

254 To make reading this document easier, the following convention has been adopted for shading  
255 sections in various colors.

256 Gray is used to indicate issues that were previously closed or deferred.

257 Blue is used to indicate issues that have just been closed or deferred in the most recent revision

258 Yellow is used to indicated issues which have recently been created or modified or are actively  
259 being debated.

260 Other open issues are not marked, i.e. left white.

261 Beginning with version 5 of this document, issues with lengthy write-ups, that have been closed

Colors:

262 “for some time” will be removed from this document, in order to reduce its overall size. The  
263 headings, a short description and resolution will be retained. All vote summaries from closed  
264 issues have also been removed.

265

## 265 Use Case Issues

### 266 Group 0: Document Format & Strategy

267 CLOSED ISSUE:[UC-0-01:MergeUseCases]

268 There are several use case scenarios in the Straw Man 1 that overlap in purpose. For example,  
269 there are several single sign-on scenarios. Should these be merged into a single use case, or  
270 should the multiplicity of scenarios be preserved?

271 Possible Resolutions:

- 272 1. Merge similar use case scenarios into a few high-level use cases, illustrated with UML  
273 use case diagrams. Preserve the detailed use case scenarios, illustrated with UML  
274 interaction diagrams. This allows casual readers to grasp quickly the scope of SAML,  
275 while keeping details of expected use of SAML in the document for other subcommittees  
276 to use.
- 277 2. Merge similar use case scenarios, leave out detailed scenarios.

278 Status: Closed, resolution 2 carries.

279 CLOSED ISSUE:[UC-0-02:Terminology]

280 Several subcommittee members have found the current document, and particularly the use case  
281 scenario diagrams, confusing in that they use either domain-specific terminology (e.g., "Web  
282 User", "Buyer") or vague, undefined terms (e.g., "Security Service.").

283 One proposal is to replace all such terms with a standard actor naming scheme, suggested by Hal  
284 Lockhart and adapted by Bob Morgan, as follows:

- 285 1. User
- 286 2. Authn Authority
- 287 3. Authz Authority
- 288 4. Policy Decision Point (PDP)
- 289 5. Policy Enforcement Point (PEP)

290 A counter-argument is that abstraction at this level is the point of design and not of requirements  
291 analysis. In particular, the real-world naming of actors in use cases makes for a more concrete  
292 goal for other subcommittees to measure against.

293 Another proposal is, for each use case scenario, to add a section that maps the players in the  
294 scenario to one or more of the actors called out above.

295 Possible Resolutions:

- 296 1. Replace domain-specific or vague terms with standard vocabulary above.
- 297 2. Map domain-specific or vague terms to standard vocabulary above for each use-case and  
298 scenario.
- 299 3. Don't make global changes based on this issue.

300 Status: Closed, resolution 3 carries

301 CLOSED ISSUE:[UC-0-03:Arrows]

302 Another problem brought up is that the use case scenarios have messages (arrow) between  
303 actors, but not much detail about the actual payload of the arrows. Although this document is  
304 intended for a high level of analysis, it has been suggested that more definite data flow in the  
305 interaction diagrams would make them clearer.

306 UC-1-08:AuthZAttrs, UC-1-09:AuthZDecisions, and UC-1-11:AuthNEvents all address this  
307 question to some degree, but this issue is added to state for a general editorial principle for the  
308 document.

309 Possible Resolutions:

- 310 1. Edit interaction diagrams to give more fine-grained detail and exact payloads of each  
311 message between players.
- 312 2. Don't make global changes based on this issue.

313 Status: Closed, resolution 2 carries.

314

314 **Group 1: Single Sign-on Push and Pull Variations**

315 CLOSED ISSUE:[UC-1-01:Shibboleth]

316 The Shibboleth security system for Internet 2  
317 (<http://middleware.internet2.edu/shibboleth/index.shtml>) is closely related to the SAML effort.

318 **[Text Removed to Archive]**

319 If these issues, along with the straw man 2 document, have addressed the requirements of  
320 Shibboleth, then the subcommittee can address each issue on its own, rather than Shibboleth as a  
321 monolithic problem.

322 Possible Resolutions:

- 323 1. The above list of issues, combined with the straw man 2 document, address the  
324 requirements of Shibboleth, and no further investigation of Shibboleth is necessary.
- 325 2. Additional investigation of Shibboleth requirements are needed.

326 Status: Closed per F2F #2, Resolution 1 Carries

327 CLOSED ISSUE:[UC-1-02:ThirdParty]

328 Use case scenario 3 (single sign-on, third party) describes a scenario in which a Web user logs in  
329 to a particular 3rd-party security provider which returns an authentication reference that can be  
330 used to access multiple destination Web sites. Is this different than Use case scenario 1 (single  
331 sign-on, pull model)? If not, should it be removed from the use case and requirements document?

332 **[Text Removed to Archive]**

333 Possible Resolutions:

- 334 1. Edit the current third-party use case scenario to feature passing a third-party  
335 authentication assertion from one destination site to another.
- 336 2. Remove the third-party use case scenario entirely.

337 Status: Closed per F2F #2, Resolution 1 Carries

338 CLOSED ISSUE:[UC-1-03:ThirdPartyDoable]

339 Questions have arisen whether use case scenario 3 is doable with current Web browser  
340 technology. An alternative is using a Microsoft Passport-like architecture or scenario.

341 **[Text Removed to Archive]**

342 Possible Resolutions:

- 343 1. The use case scenario should be removed because it is unimplementable.
- 344 2. The use case scenario is implementable, and whether it should stay in the document or  
345 not should be decided based on other factors.

346 Status: Closed per F2F #2, Resolution 2 Carries

347 CLOSED ISSUE:[UC-1-04:ARundgrenPush]

348 Anders Rundgren has proposed on security-use an alternative to use case scenario 2 (single sign-  
349 on, push model). The particular variation is that the source Web site requests an authorization  
350 profile for a resource (e.g., the credentials necessary to access the resource) before requesting  
351 access.

352 **[Text Removed to Archive]**

353 Possible Resolutions:

- 354 1. Use this variation to replace scenario 2 in the use case document.
- 355 2. Add this variation as an additional scenario in the use case document.
- 356 3. Do not add this use case scenario to the use case document.

357 Status: Closed per F2F #2 3 carries

358 DEFERRED ISSUE:[UC-1-05:FirstContact]

359 A variation on the single sign on use case that has been proposed is one where the Web user goes  
360 directly to the destination Web site without authenticating with a definitive authority first.

361 **[Text Removed to Archive]**

362 Possible Resolutions:

- 363 1. Add this use case scenario to the use case document.
- 364 2. Do not add this use case scenario to the use case document.

365 Status: Deferred by vote on Jan 29, 2002. Discussions at F2F#4 established that SAML 1.0  
366 partially meets this requirement, but does not provide everything TC members could envisage.

367 CLOSED ISSUE:[UC-1-06:Anonymity]

368 What part does anonymity play in SAML conversations? Can assertions be for anonymous  
369 parties? Here, "anonymous" means that an assertion about a principal does not include an

370 attribute uniquely identifying the principal (ex: user name, distinguished name, etc.).

371 A requirement for anonymity would state:

372 [CR-1-06-Anonymity] SAML will allow assertions to be made about anonymous  
373 principals, where "anonymous" means that an assertion about a principal does not include  
374 an attribute uniquely identifying the principal (ex: user name, distinguished name, etc.).

375 Possible Resolutions:

- 376 1. Add this requirement to the use case and requirement document.
- 377 2. Do not add this requirement.

378 Status: Closed per F2F #2, Resolution 1 Carries

379 CLOSED ISSUE:[UC-1-07:Pseudonymity]

380 What part do pseudonyms play in SAML conversations? Can assertions be made about  
381 principals using pseudonyms? Here, a pseudonym is an attribute in an assertion that identifies the  
382 principal, but is not the identifier used in the principal's home domain.

383 A requirement for pseudonymity would state:

384 [CR-1-07-Pseudonymity] SAML will allow assertions to be made about principals using  
385 pseudonyms for identifiers.

386 Possible Resolutions:

- 387 1. Add this requirement to the use case and requirement document.
- 388 2. Do not add this requirement.

389 Status: Closed per F2F #2, Resolution 1 Carries

390 CLOSED ISSUE:[UC-1-08:AuthZAttrs]

391 It's been pointed out that the concept of an "authentication document" used in the use case and  
392 requirements document does not clearly specify the inclusion of authz attributes. Here, authz  
393 attributes are attributes of a principal that are used to make authz decisions, e.g. an identifier, or  
394 group or role membership.

395 Since authz attributes are important and are required by [R-AuthZ], it has been suggested that the  
396 single sign-on use case scenarios specify when authz assertions are passed between actors.

397 Possible Resolutions:

- 398 1. Edit the use case scenarios to specify passing authz attributes with authentication

399 documents.

400 2. Do not specify the passing of authz attributes in the use case scenarios.

401 Status: Closed per F2F #2, Resolution 1 Carries

402 CLOSED ISSUE:[UC-1-09:AuthZDecisions]

403 The current use case and requirements document mentions "Access Authorization" and "Access  
404 Authorization References." In particular, this data is a record of a authorization decision made  
405 about a particular principal performing a particular action on a particular resource.

406 It would be more clear to label this data as "AuthZ Decision Documents" to differentiate from  
407 other AuthZ data, such as AuthZ attributes or AuthZ policy. To this point, the mentions of  
408 "access authorization" would be changed, and a new requirement would be added as follows:

409 [CR-1-09-AuthZDecision] SAML should define a data format for recording authorization  
410 decisions.

411 Possible Resolutions:

412 1. Edit the use case scenarios to use the term "authz decision" and add the [CR-1-09-  
413 AuthZDecision] requirement.

414 2. Do not make these changes.

415 Status: Closed per F2F #2, Resolution 1 Carries

416 CLOSED ISSUE:[UC-1-10:UnknownParty]

417 The current straw man 2 document does not have a use case scenario for exchanging data  
418 between security services that are previously unknown to each other. For example, a relying  
419 party may choose to trust assertions made by an asserting party based on the signatures on the  
420 AP's digital certificate, or through other means.

421 **[Text Removed to Archive]**

422 Possible Resolutions:

423 1. Add this use case scenario to the use case document.

424 2. Do not add this use case scenario to the use case document.

425 Status: Closed per F2F #2, Resolution 2 Carries

426 CLOSED ISSUE:[UC-1-11:AuthNEvents]

427 It is not specified in straw man 2 what authentication information is passed between parties. In

428 particular, specific information about authn events, such as time of authn and authn protocol are  
429 alluded to but not specifically called out.

430 The use case scenarios would be edited to show when information about authn events would be  
431 transferred, and the requirement for authn data would be edited to say:

432 [CR-1-11-AuthN] SAML should define a data format for authentication assertions,  
433 including descriptions of authentication events.

434 Possible Resolutions:

- 435 1. Edit the use case scenarios to specifically define when authn event descriptions are  
436 transferred, and edit the R-AuthN requirement.
- 437 2. Do not change the use case scenarios or R-AuthN requirement.

438 Status: Closed per F2F #2, Resolution 1 Carries

439 CLOSED ISSUE:[UC-1-12:SignOnService]

440 Bob Morgan suggests changing the title of use case 1, "Single Sign-on," to "Sign-on Service."

441 Possible Resolutions:

- 442 1. Make this change to the document.
- 443 2. Don't make this change.

444 Status: Closed per F2F #2, 2 carries

445 CLOSED ISSUE:[UC-1-13:ProxyModel]

446 Irving Reid suggests an additional use case scenario for single sign-on, based on proxies.

447 [Text Removed to Archive]

448 Possible Resolutions:

- 449 1. Add this use case scenario to the document.
- 450 2. Don't make this change.

451 Status: Closed by explicit vote at F2F #2, 2 carries, however see UC-1-14

452 DEFERRED ISSUE:[UC-1-14: NoPassThruAuthnImpactsPEP2PDP]

453 Stephen Farrell has argued that dropping PassThruAuthN prevents standardization of important  
454 functionality in a commonly used configuration.

455 The counter argument is the technical difficulty of implementing this capability, especially when  
456 both username/password and PKI AuthN must be supported.

457 Possible Resolutions:

- 458 1. Add this requirement to SAML 1.0
- 459 2. authorize a subgroup/task force to evaluate a suitable pass-through authN solution for  
460 eventual inclusion in V.next of SAML. If the TC likes the design once it is presented, it  
461 may choose to open up its scope to once again include pass-through authN in V1.0.  
462 Stephen is willing to champion this."
- 463 3. Do not add this requirement.

464 Status: Deferred by vote on Feb 5, 2002 – Previously closed on May 15 telcon, 2 carries

465

## 465 **Group 2: B2B Scenario Variations**

466 CLOSED ISSUE:[UC-2-01:AddPolicyAssertions]

467 Some use cases proposed on the security-use list (but not in the straw man 1 document) use a  
468 concept of a "policy document." In concept a policy document is a statement of policy about a  
469 particular resource, such as that user "evanp" is granted "execute" privileges on file  
470 "/usr/bin/emacs." Another example may be that all users in domain "Acme.com" with role  
471 "backup administrator" may perform the "shutdown" method on resource "mail server," during  
472 non-business hours.

473 Use cases where policy documents are exchanged, and especially activities like security  
474 discovery as in UC-4-04:SecurityDiscovery, would require this type of assertion. If these use  
475 cases and/or services were adapted, the term "policy document" should be used. In addition, the  
476 following requirement would be added:

477 [CR-2-01-Policy] SAML should define a data format for security policy about resources.

478 In addition, the explicit non-goal for authorization policy would be removed.

479 Another thing to consider is that the intended XACML group within Oasis is planning on  
480 working on defining a policy markup language in XML, and any work we do here could very  
481 well be redundant.

482 Possible Resolutions:

- 483 1. Remove the non-goal, add this requirement, and refer to data in this format as "policy  
484 documents."
- 485 2. Maintain the non-goal, leave out the requirement.

486 Status: Closed per F2F #2, Resolution 1 Carries

487 CLOSED ISSUE:[UC-2-02:OutsourcedManagement]

488 A use case scenario provided by Hewlett Packard illustrates using SAML enveloped in a  
489 CIM/XML request. Should this scenario be included in the use case document?

490 **[Text Removed to Archive]**

491 Potential Resolutions:

- 492 1. Add this use-case scenario to the document.
- 493 2. Do not add this use-case scenario.

494 Status: Closed per F2F #2, 2 carries  
495 CLOSED ISSUE:[UC-2-03:ASP]  
496 A use case scenario provided by Hewlett Packard illustrates using SAML for a secure interaction  
497 between an application service provider (ASP) and a client. Should this scenario be included in  
498 the use case document?

499 **[Text Removed to Archive]**

500 Potential Resolutions:

- 501 1. Add this use-case scenario to the document.
- 502 2. Do not add this use-case scenario.

503 Status: Closed per F2F #2, 2 carries

504 DEFERRED ISSUE:[UC-2-05:EMarketplace]

505 Zahid Ahmed proposes the following additional use case scenario for inclusion in the use case  
506 and requirements document.

507 Scenario X: E-Marketplace

508 **[Text Removed to Archive]**

509 Possible Resolutions:

- 510 1. The above scenario should be added to the use cases document.
- 511 2. The above scenario should not be added to the document.

512 Status: Deferred by vote on Jan 29, 2002. This functionality is not directly supported by SAML  
513 1.0 Bindings and Profiles, but could be constructed using the current core.

514 CLOSED ISSUE:[UC-2-06:EMarketplaceDifferentProtocol]

515 Zahid Ahmed has proposed that the following use case scenario be added to the use case and  
516 requirements document.

517 **[Text Removed to Archive]**

518 Possible Resolutions:

- 519 1. Add this scenario to the document.
- 520 2. This use case scenario should not be added to the document.

521 Status: Closed per F2F #2, 2 carries

522 CLOSED ISSUE:[UC-2-07:MultipleEMarketplace]

523 Zahid Ahmed proposes the following use case scenario for inclusion in the document. This use  
524 case/issue is a variant of ISSUE# [UC-2-05].

525 **[Text Removed to Archive]**

526 Possible Resolutions:

- 527 1. Add this scenario to the document.
- 528 2. The above scenario should not be added to the document.

529 Status: Closed per F2F #2, 2 carries

530 CLOSED ISSUE:[UC-2-08:ebXML]

531 Maryann Hondo proposed this use case scenario for inclusion in the use case document

532 **[Text Removed to Archive].**

533 Potential Resolutions:

- 534 1. Add this use case scenario to the use case and requirements document.
- 535 2. Do not add this scenario.

536 Status: Closed per F2F #2, 2 carries

537

538

## 538 **Group 3: Sessions**

539 **[At F2F #2, it was agreed to charter a sub group to “do the prep work to ensure that**  
540 **logout, timein, and timeout will not be precluded from working with SAML later; commit**  
541 **to doing these other pieces "next" after 1.0.” Therefore all the items in this section have**  
542 **been closed with the notation “referred to sub group.”]**

543 The purpose of the issues/resolutions in this group is to provide guidance to the rest of the TC as  
544 to the functionality required related to sessions. Some of the scenarios contain some detail about  
545 the messages which are transferred between parties, but the intention is not to require a particular  
546 protocol. Instead, these details are offered as a way of describing the functionality required. It  
547 would be perfectly acceptable if the resulting specification used different messages to  
548 accomplish the same functionality.

549 DEFERRED ISSUE:[UC-3-01:UserSession]

550 Should the use cases of log-off and timeout be supported

551 **[Text Removed to Archive].**

552 Possible Resolutions:

- 553 1. Add this requirement and/or use cases to SAML.
- 554 2. Do not add this requirement and/or use cases.

555 Status: Deferred by vote on Feb 5, 2002

556 DEFERRED ISSUE:[UC-3-02:ConversationSession]

557 Is the concept of a session between security authorities separate from the concept of a user  
558 session? If so, should use case scenarios or requirements supporting security system sessions be  
559 supported? [DavidO: I don't understand this issue, but I have left in for backwards  
560 compatibility]. [DarrenP: I think this issue arose out of a misunderstanding/miscommunication  
561 on the mailing list and has been resolved. This is more of a formality to vote this one to a closed  
562 status.]

563 Possible Resolutions:

- 564 1. Do not pursue this requirement as it is not in scope.
- 565 2. Do further analysis on this requirement to determine what it is specifically.

566 Status: Deferred by vote on Feb 5, 2002

567 DEFERRED ISSUE:[UC-3-03:Logout]

568 Should SAML support transfer of information about application-level logouts (e.g., a principal  
569 intentionally ending a session) from the application to the Session Authority ?

570 Candidate Requirement:

571 [CR-3-3-Logout] SAML shall support a message format to indicate the end of an  
572 application-level session due to logout by the principal.

573 Note that this requirement is implied by Scenario 1-3 (the second scenario 1-3 in straw man 3 -  
574 oops). This issue seeks to clarify the document by making the requirement explicit.

575 Possible Resolutions:

- 576 1. Add this requirement to SAML.
- 577 2. Do not add this requirement to SAML.

578 Status: Deferred by vote on Feb 5, 2002

579 DEFERRED ISSUE:[UC-3-05:SessionTermination]

580 For managing a SAML User Sessions, it may be useful to have a way to indicate that the SAML-  
581 level session is no longer valid. The logout requirement would invalidate a session based on user  
582 input. This requirement, for termination, would invalidate the SAML-level session based on  
583 other factors, such as when the user has not used any of the SAML-level sessions constituent  
584 application- level sessions for more than a set amount of time. Timeout would be an example of  
585 a session termination.

586 Candidate requirement:

587 [CR-3-5-SessionTermination] SAML shall support a message format for timeout of a  
588 SAML-level session. Here, "termination" is defined as the ending of a SAML-level  
589 session by a security system not based on user input. For example, if the user has not  
590 used any of the application-level sub-sessions for a set amount of time, the session may  
591 be considered "timed out."

592 Note that this requirement is implied by Scenario 1-3, figure 6, specifically the last message  
593 labeled 'optionally delete/revoke session'. This issue seeks to clarify the document by making the  
594 requirement explicit.

595 Possible Resolutions:

- 596 1. Add this requirement to SAML.
- 597 2. Do not add this requirement and/or use cases.

598 Status: Deferred by vote on Feb 5, 2002

599 DEFERRED ISSUE:[UC-3-06:DestinationLogout]

600 Should logging out of an individual application-level session be supported? Advantage: allows  
601 application Web sites control over their local domain consistent with the model most widely  
602 implemented on the web. Disadvantage: potentially more interactions between the application  
603 and the Session Authority.

604 **[Text Removed to Archive]**

605 Possible Resolutions:

- 606 1. Add this scenario and requirement to SAML.
- 607 2. Do not add this scenario or requirement.

608 Status: Deferred by vote on Feb 5, 2002

609 DEFERRED ISSUE:[UC-3-07:Logout Extent]

610 What is the impact of logging out at a destination web site?

611 Possible Resolution:

- 612 1. Logout from destination web site is local to destination [DavidO recommendation]
- 613 2. Logout from destination web site is global, that is destination + source web sites.

614 Status: Deferred by vote on Feb 5, 2002

615 DEFERRED ISSUE:[UC-3-08:DestinationSessionTermination]

616 Having the Session Authority determine the timeout of a session is covered under [UC-3-5]. This  
617 issue covers the manner and extent to which systems participating in that session can initiate and  
618 control the timeout of their own sessions.

619 **[Text Removed to Archive].**

620 Possible Resolutions:

- 621 1. Add this scenario and requirement to SAML.
- 622 2. Do not add this scenario or requirement.

623 Status: Deferred by vote on Feb 5, 2002

624 DEFERRED ISSUE:[UC-3-09:Destination-Time-In]

625 In this scenario, a user has traveled from the source site (site of initial login) to some destination  
626 site. The source site has set a maximum idle-time limit for the user session, based on user  
627 activity at the source or destination site. The user stays at the destination site for a period longer  
628 than the source site idle-time limit; and at that point the user returns to the source site. We do not  
629 wish to have the user time-out at the source site and be re-challenged for authentication; instead,  
630 the user should continue to enjoy the original session which would somehow be cognizant of  
631 user activity at the destination site.

632 Candidate Requirement:

633 [CR-3-9:Destination-TimeIn] SAML shall support destination system time-in.

634 Possible Resolutions:

- 635 1. Add this scenario and requirement to SAML.
- 636 2. Do not add this scenario or requirement to SAML.

637 Status: Deferred by vote on Feb 5, 2002

638

## 638 **Group 4: Security Services**

639 CLOSED ISSUE:[UC-4-01:SecurityService]

640 Should part of the use case document be a definition of a security service? What is a security  
641 service and how is it defined?

642 Potential Resolutions:

- 643 1. This issue is now obsolete and can be closed as several securityservices (shared  
644 sessioning, PDP--PEP relationship) have been identified within SAML.
- 645 2. This issue should be kept open.

646 Status: Closed per F2F #2, 1 carries

647 CLOSED ISSUE:[UC-4-02:AttributeAuthority]

648 Should a concept of an attribute authority be introduced into the [SAML] use case document?  
649 What part does it play? Should it be added in to an existing use case scenario, or be developed  
650 into its own scenario?

651 The "attribute authority" terminology has already been introduced in the Hal/David diagrams and  
652 discussed by the use-case group. So this issue can be viewed as requiring more detail concerning  
653 the flows derived from the diagram to be introduced into the use-case document.

654 The following use-case scenario is offered as an instance:

655 (a) User authenticates and obtains an AuthN assertion. (b) User or server submits the AuthN  
656 assertion to an attribute authority and in response obtains an AuthZ assertion containing  
657 authorization attributes.

658 Potential Resolutions:

- 659 1. A use-case or use-case scenario similar to that described above should be added to  
660 SAML.
- 661 2. This issue is adequately addressed by existing use cases and does not require further  
662 elaboration within SAML.

663 Status: Closed per F2F #2, Resolution 2 Carries

664 CLOSED ISSUE:[UC-4-03:PrivateKeyHost]

665 A concept taken from S2ML. A user may allow a server to host a private key. A credentials field  
666 within an AuthN assertion identifies the server that holds the key. Should this concept be

667 introduced into the [SAML] use case document? As a requirement? As part of an existing use  
668 case scenario, or as its own scenario?

669 The S2ML use-case scenario had the following steps:

- 670 1. User Jane (without public/private key pair) authenticates utilizing a trusted server X and  
671 receives an AuthN assertion. The trusted server holds a private/public key pair. The  
672 AuthN assertion received by Jane includes a field for the server X's public key.
- 673 2. User submits a business payload and said AuthN assertion to trusted server X. The  
674 trusted server "binds" the assertion to the payload using some form of digital signing and  
675 sends the composite package onto the next stage in the business flow.

676 Potential Resolutions:

- 677 1. A use-case or use-case scenario comprising steps 1 and 2 above should be added to the  
678 use-case document.
- 679 2. A requirement for supporting "binding" between AuthN assertions and business payloads  
680 thru digital signature be added to the use-case document.
- 681 3. This issue has been adequately addressed elsewhere; there is no need for any additions to  
682 the use-case document.

683 Status: Closed per F2F #2, Resolution 2 Carries

684 CLOSED ISSUE:[UC-4-04:SecurityDiscover]

685 UC-1-04:ARundgrenPush describes a single sign-on scenario that would require transfer of  
686 authorization data about a resource between security zones. Should a service for security  
687 discovery be part of the [SAML] standard?

688 Possible Resolutions:

- 689 1. Yes, a service could be provided to send authorization data about a service between  
690 security zones. This would require some sort of policy assertions (UC-2-  
691 01:AddPolicyAssertions).
- 692 2. No, this extends the scope of [SAML] too far. AuthZ in [SAML] should be concerned  
693 with AuthZ attributes of a principal, not of resources.

694 Status: Closed per F2F #2, Resolution 2 Carries

695

695 **Group 5: AuthN Protocols**

696 CLOSED ISSUE:[UC-5-01:AuthNProtocol]

697 Straw Man 1 explicitly makes challenge-response authentication a non-goal. Is specifying which  
698 types of authn are allowed and what protocols they can use necessary for this document? If so,  
699 what types and which protocols?

700 **[Text Removed to Archive]**

701 Possible Resolutions (not mutually exclusive):

702 1. The Non-Goal

703 "Challenge-response authentication protocols are outside the scope of the  
704 SAML"

705 should be removed from the Strawman 3 document.

706 2. The following requirements should be added to the Strawman 3 document:

707 [CR-5-01-1-StandardCreds] SAML should provide a data format for  
708 credentials including those based on name-password, X509v3 certificates,  
709 public keys, X509 Distinguished name, and empty credentials.

710 [CR-5-01-2-ExtensibleCreds] SAML The credentials data format must  
711 support extensibility in a structured fashion.

712 Status: Closed per F2F #2, 1 is not removed, 2 is not added, but see UC-1-14

713 DEFERRED ISSUE:[UC-5-02:SASL]

714 Is there a need to develop materials within SAML that explore its relationship to SASL [SASL]?

715 Possible Resolutions:

716 1. Yes

717 2. No

718 Status: Deferred by vote on Feb 5, 2002 – was previously closed per F2F #2, 2 carries

719 CLOSED ISSUE:[UC-5-03:AuthNThrough]

720 All the scenarios in Straw Man 1 presume that the user provides authentication credentials  
721 (password, certificate, biometric, etc) to the authentication system out-of-band.

722 Possible Resolutions (not mutually exclusive):

- 723 1. Should SAML be used directly for authentication? In other words should the SAML  
724 model or express one or more authentication methods or a framework for authentication?
- 725 2. Should this be explicitly stated as a non-goal?
- 726 3. Should the following statement be added to the non-goals section?

727 [NO-Authn] Authentication methods or frameworks are outside the scope  
728 of SAML.

729 Status: Closed per F2F #2, Resolution 1 Fails, Resolution 2 Passes, Resolution 3 Fails

730

730 **Group 6: Protocol Bindings**

731 CLOSED ISSUE:[UC-6-01:XMLProtocol]

732 Should mention of a SOAP binding in the use case and requirements document be changed to a  
733 say "an XML protocol" (lower case, implying generic XML-based protocols)? Or "XML  
734 Protocol", the specific W3 RPC-like protocol using XML (<http://www.w3.org/2000/xml/>)?

735 Although SOAP is being reworked in favor of XP, the current state of XML Protocol is  
736 unknown. Requiring a binding to that protocol by June may not be feasible.

737 Per David Orchard, "There is no such deliverable as XML Protocol specification. We don't know  
738 when an XMLP 1.0 spec will ship. We can NEVER have forward references in specifications.  
739 When XMLP ships, we can easily change the requirements. [...] I definitely think we should  
740 mandate a SOAP 1.1 binding."

741 Possible Resolutions:

- 742 1. Change requirement for binding to SOAP to binding to XML Protocol.
- 743 2. Leave current binding to SOAP.
- 744 3. Remove mention of binding to either of these protocols.

745 Status: Closed per F2F #2, Resolution 2 Carries

746

746 **Group 7: Enveloping vs. Enveloped**

747 CLOSED ISSUE:[UC-7-01:Enveloping]

748 SAML data will be transferred with other types of XML data not specific to authn and authz,  
749 such as financial transaction data. What should the relationship of the documents be?

750 One possibility is requiring that SAML allow for enveloping business-specific data within  
751 SAML. Such a requirement might state:

752 [CR-7-01:Enveloping] SAML messages and assertions should be able to envelop  
753 conversation-specific XML data.

754 Note that this requirement is not in conflict with [CR-7-02:Enveloped]. They are mutually  
755 compatible.

756 Possible Resolutions:

- 757 1. Add this proposed requirement.  
758 2. Do not add this proposed requirement.

759 Voted, No Conclusion

760 Voting Results

{PRIVATE}Date	27 Mar 2001
Eligible	15
Resolution 1	9
Resolution 2	4
Abstain	1

761 Status: Closed by vote on Jan 29, 2002. Core specification in XML Signature Profile states that  
762 SAML assertions and protocols must use enveloped signatures.

763 CLOSED ISSUE:[UC-7-02:Enveloped]

764 SAML data will be transferred with other types of XML data not specific to authn and authz,  
765 such as financial transaction data. What should the relationship of the documents be?

766 One possibility is requiring that SAML should be fit for being enveloped in other XML  
767 documents.

768 [CR-7-02:Enveloped] SAML messages and assertions should be fit to be enveloped in  
769 conversation-specific XML documents.

770 Note that this requirement is not in conflict with [CR-7-01:Enveloping]. They are mutually  
771 compatible.

772 Possible Resolutions:

- 773 1. Add this proposed requirement.
- 774 2. Do not add this proposed requirement.

775 Voted, Resolution 1 Carries

Resolution 2	2

777 Status: Closed by vote on Jan 29, 2002. SAML Assertions are fit for being enveloped.

778

778 **Group 8: Intermediaries**

779 CLOSED ISSUE:[UC-8-01:Intermediaries]

780 The use case scenarios in the S2ML 0.8a specification include one where an intermediary passes  
781 an S2ML message from a source party to a destination party. What is the part of intermediaries  
782 in an SAML conversation?

783 A requirement to enable passing SAML data through intermediaries could be phrased as follows:

784 [CR-8-01:Intermediaries] SAML data structures (assertions and messages) will be  
785 structured in a way that they can be passed from an asserting party through one or more  
786 intermediaries to a relying party. The validity of a message or assertion can be  
787 established without requiring a direct connection between asserting and relying party.

788 Possible Resolutions:

- 789 1. Add this requirement to the document.  
790 2. Do not add this requirement to the document.

791 Status: Closed per F2F #2, Resolution 1 Carries

792 DEFERRED ISSUE:[UC-8-02:IntermediaryAdd]

793 One question that has been raised is whether intermediaries can make additions to SAML  
794 documents. It is possible that intermediaries could add data to assertions, or add new assertions  
795 that are bound to the original assertions.

796 [Text Removed to Archive]

797 Possible Resolutions:

- 798 1. Add this use-case scenario to the document.  
799 2. Don't add this use-case scenario.

800 Status: Deferred by vote on Jan 29, 2002. There is no support for intermediaries in SAML 1.0. In  
801 fact, the SOAP Profile was defined to explicitly omit interactions among more than two parties.

802 DEFERRED ISSUE:[UC-8-03:IntermediaryDelete]

803 Another issue with intermediaries is whether SAML must support allowing intermediaries to  
804 delete data from SAML documents.

805 [Text Removed to Archive]

806 Possible Resolutions:

- 807 1. Add this use-case scenario to the document.
- 808 2. Don't add this use-case scenario.

809 Status: Deferred by vote on Jan 29, 2002. There is no support for intermediaries in SAML 1.0. In  
810 fact, the SOAP Profile was defined to explicitly omit interactions among more than two parties.

811 DEFERRED ISSUE:[UC-8-04:IntermediaryEdit]

812 Similar to [UC-8-03:IntermediaryDelete] is the issue of whether SAML must support allowing  
813 intermediaries to edit or change SAML data as they pass it between parties.

814 **[Text Removed to Archive]**

815 Possible Resolutions:

- 816 1. Add this use-case scenario to the document.
- 817 2. Don't add this use-case scenario.

818 Status: Deferred by vote on Jan 29, 2002. There is no support for intermediaries in SAML 1.0. In  
819 fact, the SOAP Profile was defined to explicitly omit interactions among more than two parties.

820 CLOSED ISSUE:[UC-8-05:AtomicAssertion]

821 One implicit assumption about SAML is that assertions will be represented as XML elements  
822 with associated digital signatures. Any additions, deletions or changes would make the signature  
823 on the assertion invalid. This would make it difficult for relying parties to determine the validity  
824 of the assertion itself, especially if it is received through an intermediary.

825 Thus, the implementation of assertions as element + signature would make [UC-8-  
826 02:IntermediaryAdd], [UC-8-03:IntermediaryDelete], and [UC-8-04:IntermediaryEdit] difficult  
827 to specify, if the idea is to actually modify the original assertions themselves. One possible  
828 solution is that some kind of diff or change structure could be added. Another possibility is that  
829 signatures on each individual sub-element of the assertion could be required, so that if the  
830 intermediary changes one sub-element the others remain valid. Neither of these is a clean  
831 solution.

832 However, if there's no goal of changing the sub-elements of the assertion, then it's possible to  
833 implement modifications. For example, [UC-8-02:IntermediaryAdd] can be implemented  
834 without breaking apart assertions. The B2B exchange could simply add its own assertions to the  
835 order, as well as the assertions provided by the buyer.

836 Deletion and edition could be implemented by simply replacing the assertions made by the buyer  
837 -- passing new AuthZ and AuthC assertions made and signed by the B2B exchange. These would

838 incorporate elements from the assertions made by the Buyer Security System, but be signed by  
839 the B2B exchange.

840 There is semantic value to who makes an assertion, though. If the B2B exchange makes the  
841 assertion rather than the Buyer Security System, there is a different level of validity for the  
842 Seller.

843 Since assertion as element + signature is a very natural implementation, it may be good to  
844 express the indivisibility of the assertion as part of a non-goal. One such non-goal could be:

845 [CR-8-05:AtomicAssertion] SAML does not need to specify a mechanism for additions,  
846 deletions or modifications to be made to assertions.

847 In addition, the use case scenarios should be edited to specifically point out that additions,  
848 deletions or modifications make changes to whole assertions, and not to parts of assertions.

849 Possible Resolutions:

- 850 1. Add this non-goal to the document, and change use case scenarios to specify that  
851 intermediaries must treat assertions as atomic.
- 852 2. Don't add this non-goal.

855

856

## 856 **Group 9: Privacy**

857 DEFERRED ISSUE:[UC-9-01:RuntimePrivacy]

858 Should protecting the privacy of the user be part of the SAML conversation? In other words,  
859 should user consent to exchange of data be given at run time, or at the time the user establishes a  
860 relationship with a security system?

861 An example of runtime privacy configuration would be use case scenario described in [UC-1-  
862 04:ARundgrenPush]. Because this scenario has been rejected by the use cases and requirement  
863 group, it makes sense to phrase this as a non-goal of SAML, rather than as a requirement.

864 [CR-9-01:RuntimePrivacy] SAML does not provide for subject control of data flow  
865 (privacy) at run-time. The determination of privacy policy is between the subject and  
866 security authorities and should be determined out-of-band, for example, in a privacy  
867 agreement.

### 868 Possible Resolutions

- 869 1. Add this proposed non-goal.
- 870 2. Do not add this proposed non-goal.

### 871 Voting Results

{PRIVATE}Date	27 Mar 2001
Eligible	15
Resolution 1	9
Resolution 2	4

872 Status: Deferred by vote on Jan 29, 2002.

873 ISSUE:[UC-9-02:PrivacyStatement]

874 Important private data of end users should be shared as needed between peers in an SAML  
875 conversation. In addition, the user should have control over what data is exchanged. How should  
876 the requirement be expressed in the use case and requirements document?

877 One difficulty is that, if run-time privacy is out of scope per UC-9-01:RuntimePrivacy, it's  
878 difficult to impose a privacy requirement on eventual implementers. Especially considering that  
879 our requirements doc is for the specification itself, and not for implementers. In addition,  
880 specifications rarely proscribe guiding principles that cannot be expressed in the specified

881 technology itself.

882 One statement suggested by Bob Morgan is as follows:

883 [CR-9-02-3-DisclosureMorgan] SAML should support policy-based disclosure of subject  
884 security attributes, based on the identities of parties involved in an authentication or  
885 authorization exchange.

886 Another, by Bob Blakley:

887 [CR-9-02-2-DisclosureBlakley] SAM should support \*restriction of\* disclosure of  
888 subject security attributes, \*based on a policy stated by the subject\*. \*This policy might  
889 be\* based on the identities of parties involved in an authentication or authorization  
890 exchange.

891 A final one, by Prateek Mishra:

892 [CR-9-02-4-DisclosureMishra] An AP should only release credentials for a subject to an  
893 RP if the subject has been informed about this possibility and has assented. The exact  
894 mechanism and format for interaction between an AP and a subject concerning such  
895 privacy issues is outside the scope of the specification.

896 Comment by David Orchard:

897 "My concerns about all of the disclosure requirements, is that I cannot see how any piece of  
898 software could be tested for conformance. In the case of Blakely style, "SAM should support  
899 \*restriction of\* disclosure of subject security attributes, \*based on a policy stated by the  
900 subject\*", how do I write a conformance test that verifies:

- 901 • what are allowable and non-allowable restrictions?
- 902 • How do I test that an non-allowable restriction hasn't been made?
- 903 • How do I verify that a subject has stated a policy?
- 904 • How can a subject state a policy?"

905 Possible Resolutions

- 906 1. Add [CR-9-02-3-DisclosureMorgan] as a requirement.
- 907 2. Add [CR-9-02-2-DisclosureBlakley] as a requirement.
- 908 3. Add [CR-9-02-4-DisclosureMishra] as a requirement.
- 909 4. Add none of these as requirements.

910 Status: Voted, No Conclusion

Resolution 2	0
Resolution 3	4
Resolution 4	7

912

913

## 913 **Group 10: Framework**

914 CLOSED ISSUE:[UC-10-01:Framework]

915 Should SAML provide a framework that allows delivery of security content negotiated out-of-  
916 band? A typical use case is authorization extensions to the core SAML constructs. The contra-  
917 position is to rigidly define the constructs without allowing extension.

918 A requirement already exists in the SAML document for extensibility: [R-Extensible] SAML  
919 should be easily extensible. Therefore, the change that voting on this issue would make would be  
920 to remove rather than add a requirement.

921 Possible Resolutions:

- 922 1. Remove the extensibility requirement.
- 923 2. Leave the extensibility requirement.

924 Status: Closed per F2F #2, Resolution 2 Carries

925 CLOSED ISSUE:[UC-10-02:ExtendAssertionData]

926 Assertions are the "nouns" of SAML. One way to extend SAML is to allow additional elements  
927 in an assertion besides the ones specified by SAML. This could be used to add additional  
928 attributes about a subject, or data structured under another namespace.

929 A requirement that captures this functionality would be:

930 [CR-10-02:ExtendAssertionData] The format of SAML assertions should allow the  
931 addition of arbitrary XML data as extensions.

932 Possible Resolutions:

- 933 1. Add requirement [CR-10-02:ExtendAssertionData].
- 934 2. Do not add this requirement.

935 Status: Closed per F2F #2, 2 carries

936 CLOSED ISSUE:[UC-10-03:ExtendMessageData]

937 Similarly to [UC-10-02], it would be useful to allow additional data to SAML messages. Either  
938 defined SAML assertions, or arbitrary XML, could be attached.

939 A potential requirement to add this functionality would be:

940 [CR-10-03:ExtendMessageData] The format of SAML messages should allow the

941 addition of arbitrary XML data, or SAML assertions not specified for that message type,  
942 as extensions.

943 Possible Resolutions:

- 944 1. Add requirement [CR-10-03:ExtendMessageData].
- 945 2. Do not add this requirement.

946 Status: Closed per F2F #2, 2 carries

947 CLOSED ISSUE:[UC-10-04:ExtendMessageTypes]

948 It's common in protocol definitions that real-world implementations require additional message  
949 types. For example, a system handling a request for authorization that is taking a long time might  
950 send a <KeepWaiting> or <AskAgainLater> message to the requester.

951 Many protocols explicitly allow for a mechanism for adding extended message types in their  
952 specification. We may want to require that SAML also allow for extended message types in the  
953 specification. One requirement may be:

954 [CR-10-04:ExtendMessageTypes] The SAML protocol will explicitly allow for  
955 additional message types to be defined by implementers.

956 Note that this is different from [UC-10-03:ExtendMessageData]. That issue is about adding  
957 extended data to existing message types in the protocol. This issue is about adding new message  
958 types entirely.

959 Also note that adding this requirement would strongly favor [CR-10-07-1], to allow  
960 interoperability.

961 Possible Resolutions:

- 962 1. Add requirement [CR-10-04:ExtendMessageTypes].
- 963 2. Do not add this requirement.

964 Status: Closed per F2F #2, 2 carries

965 CLOSED ISSUE:[UC-10-05:ExtendAssertionTypes]

966 As with [UC-10-04], it may be useful to add extended assertions to a SAML conversation. As an  
967 admittedly stretched example, an implementer may choose to add auditing to the SAML  
968 specification, and therefore define one or more <AuditAssertion> types.

969 [Text Removed to Archive]

970 Possible Resolutions:

- 971 1. Add requirement [CR-10-05:ExtendAssertionTypes].  
972 2. Do not add this requirement.

973 Status: Closed per F2F #2, 2 carries

974 CLOSED ISSUE:[UC-10-06:BackwardCompatibleExtensions]

975 Because SAML is an interoperability standard, it's important that custom extensions for SAML  
976 messages and/or assertions be compatible with standard SAML implementations. For this  
977 reasons, extensions should be clearly recognizable as such, marked with flags to indicate whether  
978 processing should continue if the receiving party does not support the extension.

979 One possible requirement for this functionality is the following:

980 [CR-10-06-BackwardCompatibleExtensions] Extension data in SAML will be clearly  
981 identified for all SAML processors, and will indicate whether the processor should  
982 continue if it does not support the extension.

983 Possible Resolutions:

- 984 1. Add requirement [CR-10-06-BackwardCompatibleExtensions].  
985 2. Do not add this requirement.

986 Status: Closed per F2F #2, Resolution 1 Carries

987 CLOSED ISSUE:[UC-10-07:ExtensionNegotiation]

988 Many protocols allow a negotiation phase between parties in a message exchange to determine  
989 which extensions and options the other party supports. For example, HTTP 1.1 has the  
990 OPTIONS method, and ESMTP has the EHLO command.

991 Since this is a fairly common design model, it may be useful to add such a feature to SAML. One  
992 option is to add a requirement for extension negotiation:

993 [CR-10-07-1:ExtensionNegotiation] SAML protocol will define a message format for  
994 negotiation of supported extensions.

995 However, this may unnecessarily complicate the SAML protocol. Because negotiation is a  
996 common design, it may be a good idea to have a clarifying non-goal in the requirements  
997 document:

998 [CR-10-07-2:NoExtensionNegotiation] SAML protocol does not define a message format  
999 for negotiation of supported extensions.

1000 Possible Resolutions:

1001 1. Add requirement [CR-10-07-1:ExtensionNegotiation].

1002 2. Add non-goal [CR-10-07-2:NoExtensionNegotiation].

1003 3. Add neither the requirement nor the non-goal.

1004 Status: Closed per F2F #2, 3 carries

1005

1005 **Group 11: AuthZ Use Case**

1006 CLOSED ISSUE:[UC-11-01:AuthzUseCase]

1007 Use Case 2 in Strawman 3 (<http://www.oasis-open.org/committees/security/docs/draft-sstc-use-strawman-03.html>) describes the use of SAML for the conversation between a Policy Enforcement Point (PEP) and a Policy Decision Point (PDP), in which the PEP sends a request describing a particular action (such as 'A client presenting the attached SAML data wishes to read <http://foo.bar/index.html>'), and the PDP replies with an Authorization Decision Assertion instructing the PEP to allow or deny that request.

1013 Possible Resolutions:

- 1014 1. Continue to include this use case.
- 1015 2. Remove this use case.

1016 Status: Closed per F2F #2, Resolution 1 Carries

1017

1017 **Group 12: Encryption**

1018 [Text Removed to Archive]

1019 CLOSED ISSUE:[UC-12-01:Confidentiality]

1020 Add the following requirement:

1021 [R-Confidentiality] SAML data should be protected from observation by third parties or  
1022 untrusted intermediaries.

1023 Possible Resolutions:

- 1024 1. Add [R-Confidentiality]  
1025 2. Do not add [R-Confidentiality]

1026 Status: Closed per F2F #2, Resolution 1 Carries

1027 CLOSED ISSUE:[UC-12-02:AssertionConfidentiality]

- 1028 1. Add the requirement: [R-AssertionConfidentiality] SAML should define a format so that  
1029 individual SAML assertions may be encrypted, independent of protocol bindings.
- 1030 2. Add the requirement: [R-AssertionConfidentiality] SAML assertions must be encrypted,  
1031 independent of protocol bindings.
- 1032 3. Add a non-goal: SAML will not define a format for protecting confidentiality of  
1033 individual assertions; confidentiality protection will be left to the protocol bindings.
- 1034 4. Do not add either requirement or the non-goal.

1035 Status: Closed per F2F #2, No Conclusion

1036 CLOSED ISSUE:[UC-12-03:BindingConfidentiality]

1037 The first option is intended to make the protection optional (both in the binding definition, and  
1038 by the user at runtime).

- 1039 1. [R-BindingConfidentiality] Bindings SHOULD (in the RFC sense) provide a means to  
1040 protect SAML data from observation by third parties. Each protocol binding must include  
1041 a description of how applications can make use of this protection. Examples: S/MIME for  
1042 MIME, HTTP/S for HTTP.
- 1043 2. [R-BindingConfidentiality] Each protocol binding must always protect SAML data from  
1044 observation by third parties.

1045 3. Do not add either requirement.

1046 Status: Closed per F2F #2, Resolution 1 Carries

1047 DEFERRED ISSUE:[UC-12-04:EncryptionMethod]

1048 If confidentiality protection is included in the SAML assertion format (that is, you chose option 1  
1049 or 2 for [UC-12-02:AssertionConfidentiality]), how should the protection be provided?

1050 Note that if option 2 (assertion confidentiality is required) was chosen for UC-12-02, resolution 1  
1051 of this issue implies that SAML will not be published until after XML Encryption is published.

1052 Proposed resolutions; choose one of:

1053 1. Add the requirement: [R-EncryptionMethod] SAML should use XML Encryption.

1054 2. Add the requirement: [R-EncryptionMethod] Because there is no currently published  
1055 standard for encrypting XML, SAML should define its own encryption format. Edit the  
1056 existing non-goal of not creating new cryptographic techniques to allow this.

1057 3. Add no requirement now, but include a note that this issue must be revisited in a future  
1058 version of the SAML spec after XML Encryption is published.

1059 4. Do not add any of these requirements or notes.

1060 Status: Deferred by vote on Feb 5, 2002 – previously closed per F2F #2, Resolution 3 Carries

1061

1061 **Group 13: Business Requirements**

1062 CLOSED ISSUE:[UC-13-01:Scalability]

1063 Bob Morgan brought up several "business requirements" on security-use. One was scalability.  
1064 This issue is a placeholder for further elaboration on the subject.

1065 A candidate requirement might be:

1066 [CR-13-01-Scalability] SAML should be appropriate for high volume of messages, and  
1067 for messages between parties made up of several physical machines.

1068 Potential Resolutions:

- 1069 1. Add requirement [CR-13-01-Scalability].  
1070 2. Do not add this requirement.

1071 Status: Closed per F2F #2, 2 carries

1072 CLOSED ISSUE:[UC-13-02:EfficientMessages]

1073 Philip Hallam-Baker's core assertions requirement document included several requirements that  
1074 were efficiency-oriented. When that requirement document was merged into Straw Man 2, the  
1075 efficiency requirements were excluded.

1076 One such requirement was:

1077 [CR-13-02-EfficientMessages] SAML should support efficient message exchange.

1078 Potential Resolutions:

- 1079 1. Add this requirement to the use case and requirements document.  
1080 2. Leave this requirement out of use case and requirements document.

1081 Status: Closed per F2F #2, 2 carries

1082 CLOSED ISSUE:[UC-13-03:OptionalAuthentication]

1083 Philip Hallam-Baker's core assertions requirement document included several requirements that  
1084 were efficiency-oriented. When that requirement document was merged into Straw Man 2, the  
1085 efficiency requirements were excluded.

1086 One such requirement was:

1087 [CR-13-03-OptionalAuthentication] Authentication between asserting party and relying

- 1088 party should be optional. Messages may omit authentication altogether.
- 1089 In this case, "authentication" means authentication between the parties in the conversation (for  
1090 example, by means of a digital signature) and not authentication by the subject.
- 1091 Potential Resolutions:
- 1092 1. Add this requirement to the use case and requirements document.
  - 1093 2. Leave this requirement out of use case and requirements document.
- 1094 Status: Closed per F2F #2, 2 carries
- 1095 CLOSED ISSUE:[UC-13-04:OptionalSignatures]
- 1096 Philip Hallam-Baker's core assertions requirement document included several requirements that  
1097 were efficiency-oriented. When that requirement document was merged into Straw Man 2, the  
1098 efficiency requirements were excluded.
- 1099 One such requirement was:
- 1100 [CR-13-04-OptionalSignatures] Signatures should be optional.
- 1101 Potential Resolutions:
- 1102 1. Add this requirement to the use case and requirements document.
  - 1103 2. Leave this requirement out of use case and requirements document.
- 1104 Status: Closed, Voted on May 15 telcon for resolution 1
- 1105 CLOSED ISSUE:[UC-13-05:SecurityPolicy]
- 1106 Bob Morgan proposed a business-level requirement as follows:
- 1107 [CR-13-05-SecurityPolicy] Security measures in SAML should support common  
1108 institutional security policies regarding assurance of identity, confidentiality, and  
1109 integrity.
- 1110 Potential Resolutions:
- 1111 1. Add this requirement to the use case and requirements document.
  - 1112 2. Leave this requirement out of use case and requirements document.
- 1113 Status: Closed per F2F #2, Resolution 2 Carries

1114 CLOSED ISSUE:[UC-13-06:ReferenceReq]

1115 Bob Morgan has questioned requirement [R-Reference] in that it is not specific enough. In  
1116 particular, he said: "Goal [R-Reference] either needs more elaboration or (likely) needs to be  
1117 dropped. What is a 'reference'? It doesn't have a standard well-understood security meaning nor  
1118 is it defined in the glossary. This Goal seems to me to be making an assumption about a low-  
1119 level mechanism for optimizing some of the transfers."

1120 One possible, more specific elaboration might be:

1121 [CR-13-06-1-Reference] SAML should define a data format for providing references to  
1122 authentication and authorization assertions. Here, a "reference" means a token that may  
1123 not be a full assertion, but can be presented to an asserting party to request a particular  
1124 assertion.

1125 [CR-13-06-2-Reference-Message] SAML should define a message format for requesting  
1126 authentication and authorization assertions using references.

1127 [CR-13-06-2-Reference-Size] SAML references should be small. In particular, they  
1128 should be small enough to be transferred by Web browsers, either as cookies or as CGI  
1129 parameters.

1130 Potential Resolutions:

- 1131 1. Replace [R-Reference] with these requirements.
- 1132 2. Leave [R-Reference] as it is.
- 1133 3. Remove mention of references entirely.

1134 Status: Closed per F2F #2, Resolution 2 Carries

1135 DEFERRED ISSUE [UC-13-07: Hailstorm Interoperability]

1136 Should SAML provide interoperability with the Microsoft Hailstorm architecture, including the  
1137 Passport login system?

1138 Status: Deferred by vote on Jan 29, 2002.

1139

1139 **Group 14: Domain Model**

1140 DEFERRED ISSUE:[UC-14-01:UMLCardinalities]

1141 The cardinalities in the UML diagrams in the Domain Model are backwards.

1142 Frank Seliger comments: The Domain model claims to use the UML notation, but has the  
1143 multiplicities according to the Coad method. If it were UML, the diagram would state that one  
1144 Credential could belong to many Principals. I assume that we would rather want to state that one  
1145 Principal can have many Credentials, similarly for System Entity, the generalization of User.  
1146 One Principal would belong to several System Entities or Users according to the diagram. I  
1147 would rather think we want one System Entity or User to have several Principals.

1148 My theory how these wrong multiplicities happened is the following: As I can see from the  
1149 change history, the tool Together has been used to create the initial version of this diagram.  
1150 Together in its first version used only the Peter Coad notation. Later versions still offered the  
1151 Coad notation as default. Peter Coad had the cardinalities (UML calls this multiplicities) just  
1152 swapped compared to the rest of the world. This always caused grief, and it did again here.

1153 Dave Orchard agrees this should be fixed.

1154 Status: Deferred by vote on Jan 29, 2002

1155

# 1155 Design Issues

## 1156 Group 1: Naming Subjects

1157 CLOSED ISSUE:[DS-1-01: Referring to Subject]

1158 By what means should Assertions identify the subject they refer to?

1159 Bob Blakely points out that references can be:

- 1160 1. Nominative (by name, i.e. some identifier)
- 1161 2. Descriptive (by attributes)
- 1162 3. Indexical (by "pointing")

1163 SAML may need to use all types, but Indexical ones in particular can be dangerous from a  
1164 security perspective.

1165 Status: Closed by vote on Sept 4, superceded by more specific issues.

1166 DEFERRED ISSUE:[DS-1-02: Anonymity Technique]

1167 How should the requirement of Anonymity of SAML assertions be met?

1168 Potential Resolutions:

- 1169 1. Generate a new, random identified to refer to an individual for the lifetime of a session.
- 1170 2. ???

1171 Status: Deferred by vote on Jan 29, 2002.

1172 CLOSED ISSUE:[DS-1-03: SubjectComposition]

1173 What is the composition of a subject or "subject specifier" within:

- 1174 • An AuthnAssn?
- 1175 • An AuthnAssnReq?

1176 Note that we have consensus on the overall composition as noted in [sec. 2, 3, & 4 of  
1177 WhiteboardTranscription-01.pdf].

1178 This was identified as F2F#3-9.

1179 This is a more specific variant of DS-1-01.

1180 Status: Closed by vote on Jan 29, 2002. Current core specifies that all Assertions and all

1181 Requests contain Subject, which in turn consists of either or both NameIdentifier and  
1182 SubjectConfirmation. AssertionSpecifier was dropped.

1183 **CLOSED ISSUE:[DS-1-04: AssnSpecifiesSubject]**

1184 Should it be possible to specify a subject in an Assertion or Assertion Request by reference to  
1185 another Assertion containing the subject in question? The referenced Assertion might be  
1186 indicated by its AssertionID or including it in its entirety.

1187 For example, a PDP might request an Attribute Assertion from an Attribute Authority by  
1188 providing an Authentication Assertion (or its ID) as the way of identifying the subject.

1189 There are two cases: AssertionID and complete Assertion.

### 1190 **AssertionID**

1191 When requesting an Assertion, it will be useful to specify an AssertionID in a situation where the  
1192 requestor does not have a copy of the Assertion, but was had received the AssertionID from  
1193 some source, for example in a Web cookie. Of course, it would be necessary that the Asserting  
1194 Party be able to obtain the Assertion in question. This scenario would be particularly convenient  
1195 if the Asserting Party already possessed the referenced Assertion, either because it had used it  
1196 previously for some other purpose or because it was co-located with the Authority that created it  
1197 originally.

1198 Using an AssertionID to specify the subject of an Assertion seems less useful, because it would  
1199 make it impossible to interpret the Assertion by itself. If at some later time, the referenced  
1200 Assertion was no longer available; it would not be possible to determine the subject of the  
1201 Assertion in question. Even if the Assertion was available, having two assertions rather than one  
1202 would be much less convenient.

### 1203 **Complete Assertion**

1204 Whether requesting an Assertion or creating a new assertion, it would never be strictly necessary  
1205 to include another Assertion in its entirety to specify the subject of the first Assertion, because  
1206 the subject field could be copied instead. Hypothetically, the complete contents of the Assertion  
1207 might have some value, as the basis of a policy decision, however the same need could be served  
1208 as well by attaching the second Assertion, rather than including it within the subject field of the  
1209 first.

1210 This was identified as F2F#3-19 and F2F#3-27, although the scope of the latter is limited to the  
1211 specific case of an Authentication Assertion being referenced within an Attribute Assertion.

1212 Potential Resolutions:

- 1213 1. Allow a subject to be specified by an AssertionID or complete Assertion.
- 1214 2. Allow a subject to be specified by an AssertionID, but not a complete Assertion.

1215 3. Allow a subject to be specified only in an Assertion Request by an AssertionID.

1216 4. Do not allow a subject to be specified by either an AssertionID or complete Assertion.

1217 Status: Closed by vote on Jan 29, 2002. AssertionSpecifier has been dropped from Subject.

1218 CLOSED ISSUE:[DS-1-05: SubjectofAttrAssn]

1219 This statement's exact meaning needs to be clarified: "the only Subjects of Attribute Assertions  
1220 are Subjects as described by Authentication Assertions."

1221 This was identified as F2F#3-26.

1222 Status: Closed by vote on Sept, 4. The statement "the only Subjects of Attribute Assertions are  
1223 Subjects as described by Authentication Assertions" has not been clarified, however the Subject  
1224 element of both types of Assertion have identical schemas and there is no suggestion in the core  
1225 spec that they differ in any way.

1226 CLOSED ISSUE:[DS-1-06: MultipleSubjects]

1227 Can an Assertion contain multiple subjects? The multiple subjects might represent different  
1228 identities, which all refer to the same system entity. Allowing multiple subjects seems more  
1229 general and allows for unanticipated future uses.

1230 On the other hand, having multiple subjects creates a number of messy issues, particularly if they  
1231 don't refer to the same entity.

1232 Champion: Irving Reid

1233 Status: Closed by vote on Jan 29, 2002. Multiple subjects are allowed. The statements in the  
1234 assertion apply to all of them.

1235 ISSUE:[DS-1-07: MultipleSubjectConfirmations]

1236 Should multiple Confirmation methods be allowed for a single NameIdentifier within the  
1237 Subject? Basically, this is a tradeoff between flexibility and complexity of (possibly undefined)  
1238 semantics.

1239 Champion: Gil Pilz

1240 Status: Closed by vote on Jan 29, 2002. Multiple SubjectConfirmationMethods are allowed. A  
1241 relying party may use any or them to confirm the subject's identity.

1242 ISSUE:[DS-1-08: HolderofKey]

1243 If a HolderOfKey SubjectConfirmation is used, does that imply that the subject is the sender of  
1244 the associated application message (request)? In general, the semantics of SubjectConfirmation

1245 need to be made very explicit in the core specification.

1246 Champion: Irving Reid

1247 Status: Open

1248 ISSUE:[DS-1-09: SenderVouches]

1249 What are the semantics of SenderVouches? How does an Assertion containing this element differ  
1250 from one that does not? When should it be used?

1251 Champion: Prateek Mishra

1252 Status: Open

1253 ISSUE:[DS-1-10: SubjectConfirmation Descriptions]

1254 The descriptions of the subject confirmation method are inadequate.

- 1255 1. There should be enough info to allow interoperation without prearrangement.  
1256 2. Ideally we should give implementors some guidance on the intended use of each, in particular,  
1257 when to use one vs. another.

1258 General Comments:

1259 There is no reference for SHA1. The reference is RFC3174. D. Eastlake, 3rd, P. Jones US Secure  
1260 Hash Algorithm 1 (SHA1) September 2001 <http://www.ietf.org/rfc/rfc3174.txt> Also decide if it  
1261 is SHA-1 or SHA1 and stick to it.

1262 All binary quantities should be represented the same way. Suggest base 64

1263 Specific:

1264 SAML Artifact - if this is specifically the SAML artifact and not just any random binary nonce,  
1265 this should reference the bindings doc, Browser Artifact Profile, section on Artifact format  
1266 (would be easier if doc had numbered sections) Also state if must be typecode 1 or can be any  
1267 typecode. Also should say: This Method is used when a web browser is issued an artifact by the  
1268 asserting party and later presents it to the relying party.

1269 SAML Artifact (SHA1) - ditto the above. Plus, why do we need both of these? Hashing is good  
1270 because you cannot derive Artifact from looking at assertion. Why not use it all the time? On the  
1271 other hand, the Profile specifies one-time use for the artifact, so I don't really see the threat.  
1272 Either way I think we should drop one of these.

1273 Holder of Key - What kind of key? It says "Any Cryptographic Key" but then indicates it is a  
1274 Public Key. Should include a reference to [XMLSig]. Do we really want to support all the  
1275 KeyInfo sub-elements, or just KeyValue? Looks to me like a lot of these, like KeyName,

- 1276 X509Data, PGPDData, SPKIDData and MgmtData, will just cause trouble and bloat  
1277 implementations.
- 1278 Sender Vouches - This one still puzzles me and I know it will puzzle anybody outside the TC.  
1279 Can't we incorporate some of the discussion from the list about what this is intended for?
- 1280 Password (Pass-Through) - What is the significance of "pass-through"? I hope somebody isn't  
1281 trying to do a Credentials Assertion by the back door. Is this intended to be a long term  
1282 password, or can it be some kind of artifact-like nonce? Does it have to be the password used for  
1283 authentication if this is an authentication assertion? If it is, what is the value of the  
1284 Authentication Assertion? Why would anyone want to send this unhashed if this is being used  
1285 as a confirmation method or is it being overloaded as an encrypted attributed for proxy login  
1286 purposes?
- 1287 Password (One-Way-Function SHA-1) - Why is this one "One-Way-Function" and the others  
1288 just "SHA-1"? I gather this is not intended to cover the case where the hashed password is stored  
1289 in the repository and the AP does not know the real password. I would drop the previous one in  
1290 favor of this one.
- 1291 Kerberos - Specify Kerberos 5. What kind of ticket? A ticket granting ticket makes no sense, so I  
1292 assume this must be a service ticket targeted to the relying party. Should say so. Also specify  
1293 base 64. Does username and realm in ticket have to match Security Domain and Name in  
1294 NameIdentifier? Or should the Security Domain be missing (or blank) and the Name contain  
1295 realm@username? Implementors will have to consider ticket lifetime as it could be shorter than  
1296 Assertion validity. Also not this doesn't make that much sense in an Authentication Assertion.
- 1297 SSL/TLS Certificate Based Client Authentication - Does it have to be different from Holder of  
1298 Key? Will we need another for SMIME, etc?
- 1299 Object Authenticator (SHA-1) - How can an XML document be a Subject? I thought a subject  
1300 referred to a system entity. Don't see how this would work in practice. Does the AP do the  
1301 hashing? Does the RP do the hashing? If neither, don't see it provides any more protection than a  
1302 simple random nonce.
- 1303 PKCS#7 - Thought this would be redundant with ds:KeyInfo, but looking at [XMLSig]  
1304 apparently not. Why does this have to be signed? Isn't the whole assertion signed? Isn't signing  
1305 optional? The description is nice and long, but doesn't a lot of it apply to other Confirmation  
1306 Methods as well? What part is unique to this one?
- 1307 Cryptographic Message Syntax - ditto PKCS #7, except this time there is no explanation of how  
1308 it is used for confirmation.
- 1309 XML Digital Signature - ditto on being signed. Also no description of how confirmation is  
1310 accomplished. How is its intended use different from say, Holder of Key?
- 1311 As noted elsewhere, the "Bearer" method dropped in the bit bucket

draft-sstc-saml-issues-08.doc

1312 <http://lists.oasis-open.org/archives/security-services/200201/msg00247.html>

1313 Champion: Hal Lockhart

1314 Status: Open

1315

1316

1316 **Group 2: Naming Objects**

1317 CLOSED ISSUE:[DS-2-01: Wildcard Resources]

1318 Nigel Edwards has proposed that Authorization Decision Assertions be allowed to refer to  
1319 multiple resources by means of some kind of wildcards.

1320 Potential Resolutions:

- 1321 1. Allow resources to be specified with fully general regular expressions.
- 1322 2. Allow resources to be specified with simple \* wildcard in the final path element: e.g.  
1323 /foo/\*, but not /foo/\*/x or /foo/y\*
- 1324 3. Don't allow wildcarded resources

1325 Status: Closed by vote during May 29 telecon

1326 CLOSED ISSUE:[DS-2-02: Permissions]

1327 Should the qualifiers of objects be called permissions, actions or operations? Authorization  
1328 decision assertions contain an object that identifies the target of the request. This is qualified  
1329 with a field called permissions, containing values like "Read" and "Write". Normal English  
1330 language usage suggests that this field represents an Action or Operation on the object.

1331 Possible Resolutions:

- 1332 1. Retain Permissions
- 1333 2. Change to Actions
- 1334 3. Change to Operations

1335 Status: Closed by vote on Sept 4. Resolution 2 (Actions)

1336

1336 **Group 3: Assertion Validity**

1337 DEFERRED ISSUE:[DS-3-01: DoNotCache]

1338 It has been suggested that there should be a way in SAML to specify that an assertion is currently  
1339 valid, but should not be cached for later use. This should not depend on the particular amount of  
1340 variation between clocks in the network.

1341 For example, a PDP may wish to indicate to a PEP that it should make a new request for every  
1342 authorization decision. For example, its policy may be subject to change at frequent and  
1343 unpredictable intervals. It would be desirable to have a SAML specified convention for doing  
1344 this. This may interact with the position taken on clock skew. For example, if SAML takes no  
1345 position on clock skew the PDP may have to set the NotAfter value to some time in the future to  
1346 insure that it is not considered expired by the PEP.

1347 Potential Resolutions:

1348 1. SAML will specify some combination of settings of the IssueInstant and ValidityInterval to  
1349 mean that the assertion should not be cached. For example, setting all three datetime fields to the  
1350 same value could be deemed indicate this.

1351 2. SAML will add an additional element to either Assertions or Responses to indicate the  
1352 assertion should not be cached.

1353 3. SAML will provide no way to indicate that an Assertion should not be cached.

1354 Status: Deferred by vote on Jan 29, 2002.

1355 CLOSED ISSUE:[DS-3-02: ClockSkew]

1356 SAML should consider the potential effects of clock skew in environments it is used.

1357 It is impossible for local system clocks in a distributed system to be exactly the same, the only  
1358 question is: how much do they differ by? This becomes an issue in security systems when  
1359 information is marked with a validity period. Different systems will interpret the validity period  
1360 according to their local time. This implies:

1361 1. Relying parties may not make the same interpretation as asserting parties.

1362 2. Distinct relying parties may make different interpretations.

1363 Generally what matters is not the absolute difference, but the difference as compared to the total  
1364 validity interval of the information. For example, the PKI world has tended to (rightly) ignore  
1365 this issue because CA and EE certificates tend to have validity intervals of years. Even Attribute  
1366 Certificates and SAML Attribute Assertions are likely to have validity intervals of days or hours.  
1367 However, it seems likely that Authorization Decision Assertions may sometimes have validity

1368 intervals of minutes or seconds. Therefore, the issue must be raised.

1369 One common problem is what to set the NotBefore element to. If it is set to the AP's current  
1370 time, it may not yet be valid for the RP. If set in the past, (a common practice) the questions arise  
1371 1) how far in the past? and 2) should the NotAfter time also be adjusted? If NotBefore is omitted,  
1372 this may not be satisfactory for nonrepudiation purposes.

1373 The NotAfter value can also be an issue if the assumed clock skew is large compared to the  
1374 Validity Interval.

1375 [These paragraphs contain personal observations by Hal Lockhart, others may disagree.

1376 In the early 1990's some popular computer systems had highly erratic system clocks which could  
1377 drift from the correct time by as much as five minutes per day. Kerberos's requirement for rough  
1378 time synchronization (usually 5 minutes) was criticized at that time because of this reality.

1379 Today most popular computer systems have clocks which keep time accurately to seconds per  
1380 month. Therefore the most common current source of time differences is the manual process of  
1381 setting time. Therefore, most systems tend to be accurate within a few minutes, generally less  
1382 than 10.

1383 By means of NTP or other time synchronization system, it is not hard to keep systems  
1384 synchronized to less than a minute, typically within 10 seconds. It is common for production  
1385 server systems to be maintained this way. The price of GPS hardware has fallen to the point  
1386 where it is not unreasonably expensive to keep systems synchronized to the true time with sub-  
1387 second accuracy. However, few organizations bother to do this. ]

1388 Potential Resolutions:

1389 1. SAML will leave it up to every deployment how to deal with clock skew.

1390 2. SAML will explicitly state that deployments must insure that clocks differ by no more  
1391 that X amount of time (X to be specified in the specification)

1392 3. SAML will provide a parameter to be set during deployment that defines the maximum  
1393 clock skew in that environment. This will be used by AP's to adjust datetime fields according to  
1394 some algorithm.

1395 4. SAML will provide a parameter in assertions that indicates the maximum skew in the  
1396 environment. RPs should use this value in interpreting all datetime fields.

1397 Status: Closed by vote on Jan 29, 2002. Resolution 1 was chosen implicitly.

1398 ISSUE:[DS-3-03: ValidityDependsUpon]

1399 In a previous version of the draft spec, assertions contained a ValidityDependsUpon  
1400 element, which allowed the asserting party to indicate that this assertion was valid only if

1401 another, specified assertion was valid. This was dropped because it was felt that the lack of a  
1402 SAML mechanism to revoke previously issued assertions made it moot.

1403 A number of people feel that this element is useful nevertheless and should be restored.

1404 It is worth noting that even in the absence of this element (from the a particular assertion or  
1405 SAML as a whole) a particular relying party can still have a policy that requires multiple  
1406 assertions to be valid.

1407 Status: Open

1408

1409

1409 **Group 4: Assertion Style**

1410 CLOSED ISSUE:[DS-4-01: Top or Bottom Typing]

1411 Should assertions be identified as Authentication, Attribute and Authorization Decision, each  
1412 containing specified elements? (Top Typing) Or should only the elements be defined allowing  
1413 them to be freely mixed? (Bottom Typing)

1414 Two comprehensive proposals to address this issue have been made in draft-orchard-maler-  
1415 assertion-00 and draft-sstc-core-08.

1416 Status: Closed by vote on Sept 4. Made moot by current schemas, which draw on both sets of  
1417 ideas.

1418 CLOSED ISSUE:[DS-4-02: XML Terminology]

1419 Which XML terms should we be using in SAML? Possibilities include: message, document,  
1420 package.

1421 Status: Closed by vote on Jan 29, 2002. The following has been accepted.

1422 SAML is specified in terms of XML. The data objects comprising SAML ("SAML objects" for  
1423 short) are thus expressed in an XML-based syntax as defined by the SAML schema, itself  
1424 expressed according to the XML schema syntax. Those SAML objects defined in terms of "XML  
1425 elements" are formally "XML documents" when considered \*in the context of XML itself\*.

1426 See <http://www.w3.org/TR/2000/REC-xml-20001006>.for the definition of "XML document".

1427 However, when considering SAML objects \*in the SAML context\*, we SHOULD use terms  
1428 (and combinations thereof, along with other terms not explicitly on this list) such as: "assertion",  
1429 "request", "response", "message", "query", "element". We SHOULD NOT use the term  
1430 "document" to describe SAML objects in the SAML context.

1431 Some obvious examples..

- 1432 • request message
- 1433 • response message
- 1434 • authentication assertion
- 1435 • SAML assertions
- 1436 • foo element, e.g. <Subject> element

1437  
1438 A longer prose example:

1439 The SAML protocol is comprised of request and response messages. SAML requests are

1440 comprised of authentication, authorization, and attribute queries. A SAML response  
1441 message is returned as a result of a query. SAML responses convey SAML authentication  
1442 assertions, authorization decision assertions, and attribute assertions.

1443 SAML assertions may be combined with other non-SAML objects in various fashions.  
1444 Examples of some such objects are otherwise-arbitrary, non-SAML XML documents  
1445 (thus including various non-SAML, XML-based protocol elements, e.g. SOAP, ebXML),  
1446 MIME messages, and so on.

1447 **CLOSED ISSUE:[DS-4-03: Assertion Request Template]**

1448 What is the best way to provide a template of values in an assertion request?

1449 Two comprehensive proposals to address this issue have been made in draft-orchard-maler-  
1450 assertion-00 and draft-sstc-core-08.

1451 **Potential Resolutions:**

- 1452 1. The requestor sends an assertion with the required field types, but missing values
- 1453 2. The requestor sends fields and values, in the form of a list, not an assertion
- 1454 3. XPATH expressions
- 1455 4. XML query statements

1456 **Status: Closed by vote on Sept 4. Agreed upon approach does not use a template.**

1457 **CLOSED ISSUE:[DS-4-04: URIs for Assertion IDs]**

1458 Should URIs be used as identifiers in assertions?

1459 This issue was identified as F2F#3-8: “We need to decide the syntax of AssertionID.” Although  
1460 this is a broader formulation, the discussion below is actually directed towards it rather than the  
1461 original form (above).

1462 This was identified as CONS-02. Does the specification (core-12) need additional specification  
1463 for the types of assertion, request, and response IDs? If so, what are these requirements?

1464 **[Text Removed to Archive]**

1465 **Status: Closed by vote on Jan 29, 2002. Current core spec defines Assertion Ids as strings, thus**  
1466 **allowing them to be URIs if desired. Uniqueness of Ids is specified.**

1467 **CLOSED ISSUE:[DS-4-05: SingleSchema]**

1468 Should we design the schema for Assertions and their respective request/response messages in

1469 different XML namespaces?

1470 Request/response messages could reference the core assertions schema. There could be many  
1471 applications that reference the core assertions without referencing the request/response stuff.  
1472 Making them pull in the request/response namespace is just extra overhead.

1473 This has been identified as F2F#3-36.

1474 Potential Resolutions:

1475 1. Use a single schema for Assertions and Request/Response messages.

1476 2. Have a schema for Assertions that is distinct from the schema for Request/Response  
1477 messages.

1478 Status: Closed by vote on Jan 29, 2002. Resolution 2 was adopted.

1479 DEFERRED ISSUE:[DS-4-06: Final Types]

1480 Does the TC plan to restrict certain types in the SAML schema to be final? If so, which types are  
1481 to be so restricted?

1482 This was identified as CONS-03.

1483 Status: Deferred by vote on Feb 5, 2002 - was previously closed by vote on Sept 4. The Schema  
1484 recommendations proposed by Eve and Phill at F2F#4 have been accepted.

1485 CLOSED ISSUE:[DS-4-07: ExtensionSchema]

1486 One of the goals of the F2F #3 “whiteboard draft” was to use strong typing to differentiate  
1487 between the three assertion types and between the three different query forms. This has been  
1488 achieved (in core-12) through the use of “abstract” schema and schema inheritance. One  
1489 implication is that any concrete assertion instance MUST utilize the xsi:type attribute to  
1490 specifically describe its type even as all assertions will continue to use a single <Assertion>  
1491 element as their container. XML processors can key off this attribute during assertion processing.

1492 Is this an acceptable approach? Other approaches, such as the use of substitution groups, are also  
1493 available. Using substitution groups, each concrete assertion type would receive its own  
1494 distinguished top-level element (e.g., <AuthenticationAssertion>) and there would be no need  
1495 for the use of xsi:type attribute in any assertion instance. At the same time the SAML schema  
1496 would be made somewhat more complex through the use of substitution groups.

1497 Should the TC investigate these other approaches? Most important: what is the problem with the  
1498 current approach?

1499 This was identified as CONS-04.

1500 Status: Closed by vote on Sept 4. The Schema recommendations proposed by Eve and Phill at  
1501 F2F#4 have been accepted

1502 ISSUE:[DS-4-08: anyAttribute]

1503 Summary: In order to make it possible to extend SAML to add attributes to native elements, we  
1504 would need to add <xsd:anyAttribute> all over the place. Should we do this?

1505 Explanation:

1506 We have expended a lot of effort trying to get SAML's customizability "right". We allow the  
1507 extension of our native types to get new elements, and in selected places we allow for the  
1508 addition of foreign elements by design. Given our prohibition against changing SAML  
1509 semantics with foreign markup, we wouldn't have to worry if foreign attributes were tacked onto  
1510 native elements, and this is a relatively cheap and easy way to "extend" a vocabulary.

1511 For example, if a SAML assertion producer finds it convenient to add ID attributes to various  
1512 elements for internal management purposes, or if they want to state what natural language an  
1513 attribute value is in, currently they can't do that and still validate the results:

1514 <saml:AttributeValue xml:lang="EN-US" AttValID="12345">...

1515 Now, xml:lang is somewhat of a special case, since its semantics are baked into core XML, but  
1516 you still need to account for it in the schema if you want to validate. We may want to account  
1517 for xml:lang and xml:space specially in the schema just because XML always allows them, but  
1518 that doesn't answer the ID attribute case, or any other similar case.

1519 The anyAttribute approach is used in some other schemas I know of, but in general they also use  
1520 ##any and ##other a lot more too.

1521 Do we want to allow this kind of flexibility in SAML?

1522 Champion: Eve Maler

1523 Status: Open

1524 CLOSED ISSUE:[DS-4-09: Eliminate SingleAssertion]

1525 Proposal:

- 1526 • Eliminate the <SingleAssertion> Element and SingleAssertionType.
- 1527 • Rename the <Assertion> element to <AbstractAssertion>.
- 1528 • Rename <MultipleAssertion> to <Assertion> and MultipleAssertionType to  
1529 AssertionType.

1530 Rationale:

1531 In the current core the <Assertion> element is of type AssertionAbstractType and contains

1532 assertion header data and no statements. <SingleAssertion> is of type SingleAssertionType and  
1533 contains assertion header data and exactly one statement. <MultipleAssertion> is of type  
1534 MultipleAssertionType and contains assertion header data and ZERO or more statements.

1535 There are a number of problems with this.

1536 First of all it is entirely possible to construct a SAML assertion containing one statement in two  
1537 valid ways: as either a <SingleAssertion>, or as a <MultipleAssertion> that contains exactly one  
1538 element. In general we want to avoid creating languages that allow you to say the same thing  
1539 different ways--primarily to avoid the possibility of implementers drawing a distinction between  
1540 the two cases.

1541 I would suggest doing away with the <SingleAssertion> element and type altogether, since it's  
1542 functionality is entirely incorporated into the <MultipleAssertion> element and type.

1543 Theoretically we lose the benefit of being able to make slightly more efficient systems for cases  
1544 where it is KNOWN that only single statements will be contained in the assertions passed. I  
1545 would assert that this benefit is illusory, but that even if it were real in some cases it's loss is  
1546 certainly outweighed by the fact that general SAML systems would not have to handle both  
1547 <SingleAssertion> and <MultipleAssertion> elements--without even considering the general  
1548 gain of avoiding the "two ways to say one thing" problem.

1549 Secondly there is the problem of the <Assertion> element. I assume that it is declared to allow  
1550 people to specify that other elements will contain an "assertion", and that the intention is that in  
1551 practice this will be populated with an descendant type that is identified via the xsi:type notation.  
1552 In other words, I think the intention is that no one will even create an <Assertion> element that  
1553 actually has the "AssertionAbstractType" type--they will only ever use it as a placeholder to  
1554 indicate that a descendant of the "AssertionAbstractType" should be inserted. If this is the case  
1555 then I suggest that we make this explicit by renaming the <Assertion> element to  
1556 <AbstractAssertion>.

1557 Thirdly, we can now rename <MultipleAssertion> to <Assertion> and "MultipleAssertionType"  
1558 to "AssertionType".

1559 The result:

1560 A core where the <AbstractAssertion> element is of type "AssertionAbstractType", and contains  
1561 only assertion header data, and the <Assertion> element--which is of "AssertionType" contains  
1562 assertion header data and zero or more statements.

1563 Champion: Chis McLaren

1564 Status: Closed by vote on Jan 29, 2002. SingleAssertion has been eliminated.

1565 ISSUE:[DS-4-10: URI Fragments]

1566 One issue that was raised was the issue of expressing identifiers as URI fragments. I.E. if our  
1567 base spec is <http://foo.bar/base> then the identifiers defined therein should be of the form  
1568 <http://foo.bar/base#X#Y#Z> etc rather than the <http://foo.bar/base/PKCS7> style I used.

1569 This would also change RespondWith slightly so that the identifiers were all nominally  
1570 fragments off the default URI which would be the base URI for the spec.

1571 All this means in practice is we introduce some # characters in several spots.

1572 <http://lists.oasis-open.org/archives/security-services/200201/msg00284.html>

1573 Champion: Phill Hallam-Baker

1574 Status: Open

1575 ISSUE:[DS-4-11: Zero Statements]

1576 Why does it matter if there are zero statements in an assertion? Shouldn't there be suitable  
1577 consistent semantics to handle that case?

1578 <http://lists.oasis-open.org/archives/security-services/200202/msg00010.html>

1579 Champion: Polar Humenn

1580 Status: Open

1581 ISSUE:[DS-4-12: URNs for Protocol Elements]

1582 Should SAML use URNs to specify various protocol elements?

1583 The SAML core spec draft (draft-sstc-core-25.pdf) specifies a number of URIs to identify  
1584 protocol elements, including XML namespaces (eg lines 180 and 183) and other items such as  
1585 confirmation methods (section 7.1, lines 1449 and following). These are currently http: URLs  
1586 (acknowledged as temporary), but I suggest it would be better to use URNs in the urn:oasis  
1587 namespace as defined in RFC 3121. I note that the DSML 2.0 document uses a base namespace  
1588 of "urn:oasis:names:tc:DSML:2:0:core" and so is a good precedent. I suggest for SAML a base  
1589 of:

1590 <urn:oasis:names:tc:SAML:1.0>

1591 Even though the TC isn't named "SAML" it seems like this string would be both concise and  
1592 well-understood. But Karl (I suppose) should make this call.

1593 Given the above, the assertion and protocol URNs could be:

1594 <urn:oasis:names:tc:SAML:1.0:assertion>

- 1595 urn:oasis:names:tc:SAML:1.0:protocol
- 1596 and perhaps the confirmation method identifiers could be:
- 1597 urn:oasis:names:tc:SAML:1.0:cm:artifact
- 1598 urn:oasis:names:tc:SAML:1.0:cm:holder-of-key
- 1599 etc.
- 1600 And the Action namespace identifiers in section 7.2 (lines 1520 etc) could be:
- 1601 urn:oasis:names:tc:SAML:1.0:action:rwdc
- 1602 Champion: RL "Bob" Morgan
- 1603 Status: Open
- 1604 ISSUE:[DS-4-13: Empty Strings]
- 1605 Should SAML prohibit string elements from being empty? Does this cause any problems? If so,
- 1606 should it be enforced in the Schema or just stated in the spec?
- 1607 Eve Maler commented:
- 1608 SAML has the following elements and attributes that can currently be empty strings (these are
- 1609 from core-25; I've tried to note places where changes are forthcoming).
- 1610 Constructs of type xsd:string
- 1611 This type allows empty strings by default.
- 1612 • Optional Name and Security Domain attributes on saml:NameIdentifier
  - 1613 • Optional IDAddress and DNSAddress attributes on saml:AuthenticationLocality
  - 1614 • The saml:Action element
  - 1615 • Optional AttributeName attribute on saml:AttributeDesignator and saml:Attribute
  - 1616 • The AssertionArtifact element
  - 1617 • StatusMessage element
- 1618 I think we don't have to worry too much about most of these; the incentive is to provide content.
- 1619 However, we should be clear that we expect there to be some content.
- 1620 Constructs of type saml:IDType
- 1621 This is a trivial derivation of xsd:string; note that some of these will change to IDReferenceType
- 1622 soon, but the emptiness quotient won't change for them.
- 1623 • Required AssertionID and Issuer attributes on saml:Assertion

- 1624 • Required RequestID attribute on samlp:Request
- 1625 • Required ResponseID and InResponse attribute on samlp:Response

1626 We could add a minLength facet to the definition of IDType that forces the length to be greater  
1627 than zero if we want there to be a syntactic check that some ID is present. Given that so many of  
1628 the characteristics of a ID that make it unique/successful are out of the hands of syntactic  
1629 expression, it seems a bit like a futile gesture.

### 1630 Constructs of type xsd:anyURI

1631 This type allows a length of zero because empty URIs have an RFC 2396-defined meaning.

- 1632 • Required-repeatable Target element
- 1633 • Optional Binding attribute on saml:AuthorityBinding
- 1634 • Optional (soon to be required) Resource attribute on  
1635 saml:AuthorizationDecisionStatement
- 1636 • Optional Namespace attribute on saml:Actions
- 1637 • Optional AttributeNamespace attribute on saml:AttributeDesignator and saml:Attribute
- 1638 • The samlp:RespondWith element

1639 Producers of SAML markup will probably have an incentive to provide sufficient content in at  
1640 least the Target and RespondWith cases because they don't have to be used at all; if you bother to  
1641 put them on, you'll bother to add content.

1642 I'm not convinced it's illegitimate to have an empty URI in the Resource case. We may need to  
1643 investigate the Resource case further, but as a reminder, the example I mentioned in today's call  
1644 was an empty URI meaning "this resource" when the action is "execute" and it's an authorization

1645 decision statement attached to a SOAP purchase-order payload. Others on the call favored a  
1646 statement that says that SAML behavior is undefined when the Resource is an empty URI.

1647 In the other cases (Binding, Namespace, and AttributeNamespace), we may want to be clear  
1648 about the non-empty requirement, but since these attributes are optional, it doesn't seem very  
1649 important to restrict this.

### 1650 Analysis

1651 It seems like a pain to add facets in the saml:IDType and xsd:string cases to ensure that there's  
1652 content in all these places, but at the same time, if we're truly worried about interoperability and  
1653 mischievous producers of SAML content, we should probably use the syntactic option at our  
1654 disposal. It's not all that invasive, though, if we just redefine IDType

1655 (and the forthcoming IDReferenceType) slightly, define a saml:string that has the appropriate  
1656 facet defined, and then switch from xsd:string to saml:string. We should also add prose to the  
1657 description of all of these types.

1658 As for xsd:anyURI, the rationale for messing with it at this point doesn't seem as strong as in the  
1659 other cases.

1660 Auxiliary issues

1661 • If we \*don't\* turn the Name attribute into regular NameIdentifier content, I think it  
1662 should be required, not optional.

1663 • Should the Namespace attribute be called ActionNamespace in parallel with  
1664 AttributeNamespace? (A few of us had a thread on the "namespace concept" topic  
1665 recently, wherein a few other alternative names were suggested as well. Should this be  
1666 turned into a low-priority issue?)

1670

## 1670 **Group 5: Reference Other Assertions**

1671 A number of requirements have been identified to reference an assertion with in another  
1672 assertion or within a request.

1673 Phillip Hallam-Baker observes: “there is more than one way to support this requirement,

1674 “[A] The first is to simply cut and paste the assertion into the <Subject> field so we have  
1675 <Subject><Assertion><Claims><Subject>[XYZ]. This approach is simple and direct but does  
1676 not seem to achieve much since it essentially comes down to ‘you can unwrap this structure to  
1677 find the information you want’. Why not just cut to the chase and specify <Subject>[XYZ] ?

1678 “[B] The problem with cutting to the chase is that it means that the application is simply told the  
1679 <subject> without any information to specify where that data came from. In many audit  
1680 situations one would need this type of information so that if something bad happens it is possible  
1681 to work out exactly where the bogus information was first introduced and how many inferences  
1682 were derived from it. So we might have <Subject><AssertionRef>[XYZ]

1683 “[C] The above is my preferred representation since the assertion can be used immediately by the  
1684 simplest SAML application without the need to dereference the assertion reference to discover  
1685 the subject of the assertion. However one could argue that an application might want to specify  
1686 simply <Subject><AssertionRef> and then specify the referenced assertion in the advice  
1687 container.

1688 “I think that the choice is really between [B] and [C] since the first suggestion in [A] is unwieldy  
1689 and the second is simply the status quo.

1690 “Of these [B] is more verbose, [C] requires applications to perform some pointer chasing and  
1691 could be seen as onerous.”

1692 The following four scenarios have been identified where this is required:

1693 **DEFERRED ISSUE:[DS-5-01: Dependency Audit]**

1694 One issue with draft-sstc-core-07.doc is a lack of support for audit of assertion dependency  
1695 between co-operating authorities. As one explicit goal of SAML was to support inter-domain  
1696 security (i.e., each authority may be administered by a separate business entity) this seems to be  
1697 a serious "gap" in reaching that goal.

1698 Consider the following example:

1699 (1) User Ravi authenticates in his native security domain and receives

1700 Assertion A:

1701

```

1702     <Assertion>
1703     <AssertionID>http://www.small-company.com/A</AssertionID>
1704     <Issuer>URN:small-company:DivisionB</Issuer>
1705     <ValidityInterval> . . . </ValidityInterval>
1706     <Claims>
1707         <subject>"cn=ravi, ou=finance, id=325619"</subject>
1708         <attribute>manager</attribute>
1709     </Claims>
1710 </Assertion>

```

1711 (2) User Ravi authenticates to the Widget Marketplace using assertion A and based on the  
1712 policy:

1713 All entities with "ou=finance" authenticated thru small-company.com with attribute  
1714 manager have purchase limit \$100,000 receives Assertion B from the Widget Marketplace:

```

1715     <Assertion>
1716     <AssertionID>http://www.WidgetMarket.com/B</AssertionID>
1717     <Issuer>URN:WidgetMarket:PartsExchange</Issuer>
1718     <ValidityInterval>. . . </ValidityInterval>
1719     <Claims>
1720         <subject>"cn=ravi, ou=finance, id=325619"</subject>
1721         <attribute>max-purchase-limit-$100,000</attribute>
1722     </Claims>
1723 </Assertion>

```

1724 (3) User Ravi purchases farm machinery from a parts provider hosted at the Widget Marketplace.  
1725 The parts provider authorizes the transaction based on Assertion B.

1726 Even though Assertion B has been issued by the Widget Marketplace in response to assertion A  
1727 (I guess another way to look at this to view assertion A as the subject of B as in [1]) there is no  
1728 way to represent this information within SAML.

1729 If there is a problem with Ravi's purchases at the Widget Marketplace (Ravi wont pay his bills)  
1730 there is nothing in the SAML flow that ties Assertion B to Assertion A. This appears to be a  
1731 significant missing piece to me.

1732 Status: Deferred by vote on Jan 29, 2002.

1733 CLOSED ISSUE:[DS-5-02: Authenticator Reference]

1734 The authenticator element of an assertion should be able to reference another assertion, used  
1735 solely for authentication.

1736 Status: Closed by vote on Sept 4. This approach was not used.

- 1737 CLOSED ISSUE:[DS-5-03: Role Reference]
- 1738 The role element should be able to reference another assertion that asserts the attributes of the  
1739 role.
- 1740 Status: Closed by vote on Sept 4. Role is no longer part of the core schema.
- 1741 ISSUE:[DS-5-04: Request Reference]
- 1742 There should be a way to reference an assertion as the subject of a request. For example, a  
1743 request might reference an Attribute Assertion and ask if the subject of that assertion could  
1744 access a specified object.
- 1745 Status: Open
- 1746

1746 **Group 6: Attributes**

1747 DEFERRED ISSUE:[DS-6-01: Nested Attributes]

1748 Should SAML support nested attributes? This means that for example, a role could be a member  
1749 of another role. This is one standard way of distinguishing the semantics of roles from groups.

1750 There are many issues of semantics and pragmatics related to this. These include:

- 1751 1. Limit of levels if any
- 1752 2. Circular references
- 1753 3. Distributed definition
- 1754 4. Mixed attribute types.

1755 Status: Deferred by vote on Jan 29, 2002.

1756 CLOSED ISSUE:[DS-6-02: Roles vs. Attributes]

1757 Should Attributes and Roles be identified as separate objects?

1758 Status: Closed by vote on Sept 4. Core no longer contains roles.

1759 CLOSED ISSUE:[DS-6-03: Attribute Values]

1760 Should Attributes have some 'attribute-value' type structure to them?

1761 Status: Closed by vote on Sept 4. Current core defines element Attribute to have three sub-  
1762 elements, optional namespace, required name and one or more values. Values in turn may be  
1763 defined in another namespace.

1764 DEFERRED ISSUE:[DS-6-04: Negative Roles]

1765 Should there be a way to state that someone does not have a role?

1766 Status: Deferred by vote on Jan 29, 2002.

1767 CLOSED ISSUE:[DS-6-05: AttributeScope]

1768 Should the core schema specify a way to express an attributes scope, or should this be left as a  
1769 part of the structure of the attribute? Scope has essentially the same meaning as security domain.  
1770 See DS-8-01 and DS-8-03.

1771 Champion: Scott Cantor

1772 Status: Closed by vote on Jan 29, 2002. Attribute scope must be specified as a part of the  
1773 attribute structure. (Note however that Subject NameIdentifier has a specific SecurityDomain  
1774 element that roughly corresponds to the notion of attribute scope for the subject name attribute.)

1775 Note that this is not the same as Attribute Namespace. This is discussed here.

1776 <http://lists.oasis-open.org/archives/security-services/200201/msg00210.html>

1777 <http://lists.oasis-open.org/archives/security-services/200201/msg00211.html>

1778 <http://lists.oasis-open.org/archives/security-services/200201/msg00250.html>

1779 <http://lists.oasis-open.org/archives/security-services/200201/msg00251.html>

1780 <http://lists.oasis-open.org/archives/security-services/200201/msg00254.html>

1781 **ISSUE:[DS-6-06: Multivalue Attributes]**

1782 During some Shibboleth discussions about attribute value syntax, RLBob pointed out that it  
1783 doesn't make a lot of sense to restrict the AttributeValue element to a single occurrence, since  
1784 many attributes (directory-oriented and otherwise) are multi-valued.

1785 An example is the eduPersonAffiliation attribute, which can contain one or more enumerated  
1786 values such as faculty, staff, or student.

1787 There are three immediately evident ways to encode multiple values for an attribute in an  
1788 attribute statement:

1789 1) Include the same attribute namespace/name multiple times, a la:

```
1790 <Attribute AttributeName="Affiliation" AttributeNamespace="eduPerson">  
1791   <AttributeValue xsi:type="eduPerson:AffiliationType">  
1792     staff  
1793   </AttributeValue>  
1794 </Attribute>  
1795 <Attribute AttributeName="Affiliation" AttributeNamespace="eduPerson">  
1796   <AttributeValue xsi:type="eduPerson:AffiliationType">  
1797     student  
1798   </AttributeValue>  
1799 </Attribute>
```

1800 2) Design the value to be a list, a la:

```
1801 <Attribute AttributeName="Affiliation" AttributeNamespace="eduPerson">  
1802   <AttributeValue xsi:type="eduPerson:AffiliationType">  
1803     staff student  
1804   </AttributeValue>  
1805 </Attribute>
```

1806 3) Allow more than one AttributeValue, a la:

```
1807 <Attribute AttributeName="Affiliation" AttributeNamespace="eduPerson">
1808   <AttributeValue xsi:type="eduPerson:AffiliationType">
1809     staff
1810   </AttributeValue>
1811   <AttributeValue xsi:type="eduPerson:AffiliationType">
1812     student
1813   </AttributeValue>
1814 </Attribute>
```

1815 Of these three solutions, the last seems the best to me. It combines the overall brevity of solution  
1816 2 with a clearer communication of the meaning.

1817 It also would allow attribute values that are lists of simple types to be encoded without an  
1818 extension schema to define an xsi:type for the list. Affiliation isn't a good example of this,  
1819 because it's an enumeration, but in other cases, it would be an advantage.

1820 The change suggested is simply to add maxOccurs="unbounded" to the AttributeValue element  
1821 and specify that multiple values for an element may exist. The processing model for attributes is  
1822 mostly left unspecified now anyway.

1823 <http://lists.oasis-open.org/archives/security-services/200201/msg00178.html>

1824 Champion: Scott Cantor

1825 Status: Open

1826

1826 **Group 7: Authentication Assertions**

1827 CLOSED ISSUE:[DS-7-01: AuthN Datetime]

1828 An Authentication Assertion should contain the date and time that the Authentication occurred.  
1829 This could be done by explicitly assigning this meaning to the IssueInstant or NotBefore elements  
1830 or create a new element containing a datetime.

1831 Possible Resolutions:

- 1832 1. Use IssueInstant in a AuthN Assertion to indicate datetime of AuthN.
- 1833 2. Use NotBefore in a AuthN Assertion to indicate datetime of AuthN.
- 1834 3. Create a new element to indicate datetime of AuthN.

1835 Status: Closed by vote on Sept 4. Current core contains AuthenticationInstant, satisfying this  
1836 issue.

1837 CLOSED ISSUE:[DS-7-02: AuthN Method]

1838 An element is required in AuthN Assertions to indicate the method of AuthN that was used. This  
1839 could be a simple text field, but the values should be registered with some central authority.  
1840 Otherwise different identifiers will be created for the same methods, harming interoperability.

1841 Core-12 addresses this issue with AuthenticationCode. CONS-12 asks: what restrictions, if any,  
1842 should be placed on the format of the contents of the AuthenticationCode element? Should this  
1843 be a closed list of possible values? Should the list be open, but with some “well-known” values?  
1844 Should we refer to another list already in existence?

1845 Are the set of values supported for the <Protocol> element (DS-8-03) essentially the same as  
1846 those required for the <AuthenticationCode> element?

1847 Status: Closed by vote on Sept 4. Current core contains AuthenticationMethod, satisfying this  
1848 issue.

1849 CLOSED ISSUE:[DS-7-03: AuthN Method Strength]

1850 SAML has identified a requirement to indicate that a negative AuthZ decision might be changed  
1851 if a “stronger” means of AuthN was used. In support of this it is useful to introduce the concept  
1852 of AuthN strength. AuthN strength is an element containing an integer representing strength of  
1853 AuthN, where a larger number is considered stronger. Individual deployments could assign  
1854 numbers to particular AuthN methods according to their policies. This would allow an AuthZ  
1855 policy to state that the required AuthN must exceed some value.

1856 Possible Resolutions:

1857 1. Add an AuthN strength element.

1858 2. Do not add an AuthN strength element.

1859 Status: Closed by vote on Jan 29, 2002. Resolution 2.

1860 CLOSED ISSUE:[DS-7-04: AuthN IP Address]

1861 Should an AuthN Assertion contain the (optional) IP Address from which the Authentication was  
1862 done? This information might be used to require that other requests in the same session originate  
1863 from the same source. Alternatively it might be used as an input to an AuthZ decision or simply  
1864 recorded in an Audit Trail.

1865 One reason not to include this information is that it is not authenticated and can be spoofed. Also  
1866 requiring that the IP address match future requests may cause spurious errors when firewalls or  
1867 proxies are used. On the other hand, many systems today use this information.

1868 This was identified as F2F#3-12.

1869 Possible Resolutions:

1870 1. Add IP Address to the AuthN Assertion schema.

1871 2. Do not add IP Address to the AuthN Assertion schema.

1872 Status: Closed by vote on Jan 29, 2002. Resolution 1.

1873 CLOSED ISSUE:[DS-7-05: AuthN DNS Name]

1874 Should the AuthN Assertion contain an (optional) DNS name, distinct from the DNS name  
1875 indicating the security domain of the Subject? If so, what are the semantics of this field?

1876 An obvious answer is that the DNS name is the result of doing a reverse lookup on the IP  
1877 Address from which the Authentication was done. This suggests that there is a relationship  
1878 between this issue and DS-7-04. Presumably if the IP Address is not included in the  
1879 specification, this field will not be either. However if IP Address is included, DNS name might  
1880 still not be.

1881 The DNS name in the subject represents the security domain that knows how to authenticate this  
1882 subject. The DNS name of authentication would reflect the location from which the  
1883 Authentication was done. These will often be different from each other.

1884 This value might be used for AuthZ decisions or Audit. Of course, a reverse lookup could be  
1885 done on the IP Address at a later time, but the result might be different. Like the IP Address, the  
1886 DNS name is not authenticated and could be spoofed, either by spoofing the IP Address or  
1887 impersonating a legitimate DNS server.

1888 This was identified as F2F#3-13.

1889 Possible Resolutions:

1890 1. Add DNS Name to the AuthN Assertion schema.

1891 2. Do not add DNS Name to the AuthN Assertion schema.

1892 Status: Closed by vote on Jan 29, 2002. Resolution 1.

1893 DEFERRED ISSUE:[DS-7-06: DiscoverAuthNProtocols]

1894 Should SAML provide a means to discover supported types of AuthN protocols?

1895 Simon Godik has suggested: One way to do it is to use AuthenticationQuery with empty  
1896 Authenticator subject. Then SAMLRequest will carry AuthenticationAssertion with  
1897 Authenticator subject listing acceptable protocols.

1898 The problem is that Authenticator element does not allow for 0 occurrences of Protocol.  
1899 Should we specify minOccurs=0 on Protocol element for that purpose?

1900 Possible Resolutions:

1901 1. Declare AuthN Protocol discovery out of scope for SAML V1.0.

1902 2. Support it in the way suggested.

1903 3. Support it some other way.

1904 Status: Deferred by vote on Jan 29, 2002.

1905

1905 **Group 8: Authorities and Domains**

1906 The following points are generally agreed.

- 1907 • An Assertion is issued by an Authority.
- 1908 • Assertions may be signed.
- 1909 • The name of a subject must be qualified to some security domain.
- 1910 • Attributes must be qualified by a security domain as well.
- 1911 • Nigel Edwards has suggested that resources also need to be qualified by domain.

1912 **CLOSED ISSUE:[DS-8-01: Domain Separate]**

1913 Stephen Farrell has pointed out that there may be a requirement to encrypt, for example, the user  
1914 name but not the domain. Therefore they should be in separate elements. If domains are going to  
1915 appear all over the place, maybe we need a general way of having element pairs or domain and  
1916 "thing in domain."

1917 Possible Resolutions:

- 1918 1. Domains will always appear in a distinct element from the item in the domain
- 1919 2. The domain and item may be combined in a single element.

1920 Status: Closed by vote on Jan 29, 2002. Resolution 1. Core defines SecurityDomain as a sub-  
1921 element of NameIdentified, which is one of the elements for specifying Subject

1922 **CLOSED ISSUE:[DS-8-02: AuthorityDomain]**

1923 Should SAML take any position on the relationship between the 1) Authority, 2) the entity that  
1924 signed the assertion, and 3) the various domains scattered throughout the assertion? For example,  
1925 the Authority and Domain could be defined to be the same thing. Alternatively, Authorities could  
1926 assert for several domains, but each domain would have only one authority. Another possibility  
1927 would be to require that the domain asserted for be the same as that found in the Subject field of  
1928 the PKI certificate used to sign the assertion.

1929 The contrary view is that is a matter for private arrangement among asserting and relying parties.

1930 At F2F #3 this issue was raised in the form of:

- 1931 • F2F#3-15: Can an Authentication Authority issue assertions "for" ("from") multiple  
1932 domains?

- 1933 • F2F#3-16: Can multiple Authentication Authorities issue assertions "for" a given single  
1934 domain?
- 1935 The general consensus from F2F #3 was that an Authority (Asserting Party) of any type can issue  
1936 Assertions about multiple domains and multiple Authorities can issue Assertions about the same  
1937 domain. However, this issue has not been officially closed.
- 1938 Status: Closed by vote on Sept 4. There is nothing in the current core to prevent Authorities from  
1939 issuing Assertions about Subjects in multiple domains or to prevent multiple Authorities from  
1940 issuing Assertions about Subjects in the same domain.
- 1941 **CLOSED ISSUE:[DS-8-03: DomainSyntax]**
- 1942 What is the composition of a “security domain” specifier? What is their syntax? What do they  
1943 designate? Are they arbitrary or are they structured? JeffH has suggested that they are essentially  
1944 the same as Issuer identifiers.
- 1945 This was identified as F2F#3-11.
- 1946 Core-12 addresses this issue with SecurityDomain. CONS-08 asks: Should the type of the  
1947 <SecurityDomain> element of a <NameIdentifier> have additional or different structure?
- 1948 Status: Closed by vote on Jan 29, 2002. Core specifies subject’s SecurityDomain as a string. The  
1949 description says that interpretation is left to implementations
- 1950 **CLOSED ISSUE:[DS-8-04: Issuer]**
- 1951 Does the specification (core-12) need to further specify the Issuer element? Is a string type  
1952 adequate for its use in SAML? See also DS-4-04.
- 1953 This was identified as CONS-05.
- 1954 Status: Closed by vote on Jan 29, 2002. Core specifies a required Issuer element as a string
- 1955
- 1956

1956 **Group 9: Request Handling**

1957 ISSUE:[DS-9-01: AssertionID Specified]

1958 SAML should define the responses to requests that specify a particular AssertionID. For  
1959 example,

- 1960
- What if the assertion doesn't exist or has expired?
  - What if the assertion contents do not match the request?
  - Is it ever legal to send a different assertion?
- 1961
- 1962

1963 Status: Open

1964 DEFERRED ISSUE:[DS-9-02: MultipleRequest]

1965 Should SAML provide a means of requesting multiple assertion types in a single request? This  
1966 has been referred to as "boxcaring." In simplest form this could consist of concatenating several  
1967 defined requests one message. However there are usecases in which it would convenient to have  
1968 the second request use data from the results of the first.

1969 For example, it would be useful to ask for an AuthN Assertion by ID and for and Attribute  
1970 Assertion referring to the same subject.

1971 Potential Resolutions:

- 1972
1. Do not specify a way to make requests for multiple assertions types in SAML V1.0.
  - 1973 2. Allow simple concatenation of requests in one message.
  - 1974 3. Provide a more general scheme for multiple requests.

1975 Status: Deferred by vote on Jan 29, 2002.

1976 DEFERRED ISSUE:[DS-9-03: IDandAttribQuery]

1977 Should SAML allow queries containing both an Assertion ID and Attributes?

1978 Tim Moses comments: The need to convey an assertion id and attributes in the same query arises  
1979 in the following circumstances.

1980 [Text Removed to Archive]

1981 Possible Resolutions:

- 1982
1. Allow queries to specify both an Assertion ID and Attributes

1983 2. Only allow queries to specify one or the other.

1984 Status: Deferred by vote on Jan 29, 2002.

1985 CLOSED ISSUE:[DS-9-04: AssNType in QuerybyArtifact]

1986 When an Assertion is requested by providing an Artifact, there should be a way to refer to which  
1987 type of Assertion is being requested. Originally, an Artifact referred to a specific Assertion, so  
1988 this was not required. However, under current design, an Artifact may refer to both an  
1989 Authentication Assertion and an Attribute Assertion.

1990 Champion: Simon Godik

1991 Status: Closed by vote on Jan 29, 2002. Artifact now refers to a specific Assertion. Assertions  
1992 may contain multiple statements of the same or different types. For example, a single Artifact  
1993 may be used to retrieve a single assertion with both Authentication and Attribute statements.

1994 ISSUE:[DS-9-05: RequestAttributes]

1995 We should be able to pass request attributes to the issuing party.

1996 I would like to propose addition to the RequestType:

```
1997 <complexType name="RequestType">
1998   <complexContent>
1999     <extension base="samlp:RequestAbstractType">
2000       <sequence>
2001         <element ref="saml:Attribute" minOccurs="0" maxOccurs="unbounded"/>
2002         <choice>
2003           -- same as before --
2004         </choice>
2005       </sequence>
2006     </extension>
2007   </complexContent>
2008 </complexType>
```

2009 Champion: Simon Godik

2010 Status: Open

2011 ISSUE:[DS-9-06: Locate AttributeAuthorities]

2012 Should an Authentication Assertion provide the means to locate Attribute Authorities with  
2013 information about the same subject?

2014 Context here is that Authentication Authority can front several Attribute Authorities

2015 as in the case of Shibboleth. Authentication Authority should be able to point  
 2016 to the correct Attribute Authority for authenticated subject by including information  
 2017 about Attribute Authority in AuthenticationAssertion.

2018 Proposed text:

2019  
 2020 SAML assumes that given authentication assertion relying party can find  
 2021 attribute authority for the authenticated subject.

2022 In a more dynamic situation Authentication Authority can be placed in front  
 2023 of a number of Attribute Authorities. In this case Authentication Authority  
 2024 may want to direct relying parties to the specific Attribute Authorities at the  
 2025 time when authentication assertion is issued.

2026 AuthorityBinding element specifies the type of authority (authentication, attribute,  
 2027 authorization) and points to it via URI. AuthenticationStatementType contains optional  
 2028 list of AuthorityBinding's. All AuthorityBinding's in the list must be of the 'attribute' type.  
 2029 Any authority pointed to by the AuthorityBinding list may be queried by the relying party.

2030 <element name="AuthorityBinding" type="saml:AuthorityBindingType"/>

2031 <complexType name="AuthorityBindingType">

2032     <attribute name="AuthorityKind">

2033         <simpleType>

2034             <restriction base="string">

2035                 <enumeration value="authentication"/>

2036                 <enumeration value="attribute"/>

2037                 <enumeration value="authorization"/>

2038             </restriction>

2039         </simpleType>

2040     </attribute>

2041     <attribute name="Binding" type="anyURI"/>

2042 </complexType>

2043     <element name="AuthenticationStatement" type="saml:AuthenticationStatementType"/>

2044     <complexType name="AuthenticationStatementType">

2045         <complexContent>

2046             <extension base="saml:SubjectStatementAbstractType">

2047                 <sequence>

2048                     <element ref="saml:AuthenticationLocality" minOccurs="0"/>

2049                     <element ref="saml:AuthorityBinding" minOccurs="0"

2050                     maxOccurs="unbounded"/>

2051                 </sequence>

2052             <attribute name="AuthenticationMethod" type="anyURI"/>

2053             <attribute name="AuthenticationInstant" type="dateTime"/>

2054 </extension>  
2055 </complexContent>  
2056 </complexType>

2057 Champion: Simon Godik

2058 Status: Open

2059 CLOSED ISSUE:[DS-9-07: Request Extra AuthzDec Info]

2060 Should the Authorization Decision Request be able to request additional information relating to  
2061 the Actions specified?

2062 Champion: Simon Godik

2063 Status: Closed by vote on Jan 29, 2002. This feature was not adopted.

2064 CLOSED ISSUE:[DS-9-08: No Attribute Values in Request]

2065 Is it intended that when AttributeDesignator from the saml: namespace is reused in the protocol  
2066 schema (for an AttributeQuery), you're supposed to supply the AttributeValue? I would think  
2067 that in an assertion you do want to spell out an attribute value, but in a query you just want to ask  
2068 for the attribute of the specified name, without parameterizing it by the value.

2069 E.g., if I want to know the PaidStatus of a subscriber to a service, I would just say "Please give  
2070 me the value of the PaidStatus attribute" -- I wouldn't say "Please give me the  
2071 PaidStatus=PaidUp attribute". Right??

2072 If we want to change this, we would need to have something like a base AttributeDesignatorType  
2073 (and an AttributeDesignator element) in saml: that just has AttributeName and  
2074 AttributeNamespace (currently XML attributes). Then we should extend it in samlp: to get an  
2075 AttributeValueType (and an AttributeValue element) that adds an element called AttributeValue.

2076 Champion: Eve Maler

2077 Status: Closed by vote on Jan 29, 2002. AttributeQuery now contains AttributeDesignator.

2078 CLOSED ISSUE:[DS-9-09: Drop CompletenessSpecifier]

2079 CompletenessSpecifier was intended to control the behavior of requests for Attribute Assertions,  
2080 when an Authority could only partly fulfill requests for enumerated attributes. However, much  
2081 confusion was generated over the proper behavior, error responses and general motivation for  
2082 this feature. It is proposed that the CompletenessSpecifier be dropped entirely.

2083 Champion: Eve Maler

2084 Status: Closed by vote on Jan 29, 2002. CompletenessSpecifier has been dropped.

2085 ISSUE:[DS-9-10: IssueInstant in Req&Response]

2086 Should IssueInstant be added to Request and Response messages? This would allow  
2087 implementations to prevent replay attacks in environments where these are not prevented by  
2088 other means.

2089 Champion: Scott Cantor

2090 Status: Open

2091 ISSUE:[DS-9-11: Resource in Attribute Query]

2092 In the message

2093 <http://lists.oasis-open.org/archives/security-services/200110/msg00087.html>

2094 of 2001-10-15, Marlena Erdos proposed the addition of an additional schema element to the  
2095 SAML attribute query. We discussed this in some detail at the Nov 13-14 F2F and took a vote to  
2096 include it, pending the creation of more explanatory text regarding the element that would be  
2097 included in the SAML spec. This note provides the requested text.

2098 This proposal is specific to the inclusion of context in attribute queries, and does not address  
2099 broader, more complex, use cases in which arbitrary context might be useful, such as in  
2100 authorization decision queries. The requirements for that are sufficiently different as to warrant a  
2101 separate proposal (if desired by others in the committee).

2102 Marlena's note provides extensive rationale for the element, in terms of meeting Shibboleth  
2103 requirements. At the F2F we tried to justify it in more general terms. Here is an attempt at  
2104 writing that down.

2105 Consider the exchange between a requester Q, which generates a request containing an  
2106 AttributeQuery (core-20, section 2.4.1), and a responder R which responds with an assertion  
2107 containing an AttributeStatement (core-20, section 1.6.1). When preparing its response, R can  
2108 take into account these aspects of the request:

2109 Subject: Obviously the main thing.

2110 Identity of requester: Though not a distinguished schema element, presumably in most  
2111 situations the request would be authenticated via a security mechanism in some  
2112 binding. This permits the responder to apply access control to returned attributes based  
2113 on the identity of the requester.

2114 Requested attributes: Via the Attribute element in the query the requester can indicate its  
2115 interest in having particular attributes be returned.

2116 (Obviously R can apply whatever other policy it wants as well.)

2117 The use of the items above can support reasonable optimization and least-privilege: the requester  
2118 can ask for just what it wants, and the responder can restrict the attributes it provides to only  
2119 those the requester is allowed to see. However, there is a system design that we think is likely to  
2120 occur often that it doesn't support well, and that is where a number of "application domains" (ie,  
2121 entities about which distinct policy might be set about which attributes should be used) make use  
2122 of a single requester (ie, a single requesting identity). This kind of system could exist for many  
2123 reasons: the typical "portal" scenario; a single web server supporting applications for different  
2124 departments in an organization; a single web front end for several distinct non-web backend  
2125 systems. In this situation we would like the responder to base its response not only on the  
2126 requester identity but in which application domain the attributes will be used.

2127 Clearly it would be possible to always deploy systems such that each distinct "application  
2128 domain" is represented by a distinct requesting identity. However, this imposes what seems to us  
2129 a needless burden on application deployment, e.g. having to generate and manage a separate  
2130 requester client certificate for each application behind a portal. It is very useful, instead, for an  
2131 attribute query to contain an additional element, other than subject and requester, specifying  
2132 further context that the responder can use to decide which attributes to respond with.

2133 We propose that support for this element is optional (i.e., a conforming implementation doesn't  
2134 have to support it), so this feature should not unduly affect attribute responder implementations  
2135 that do not wish to support it. A responder that wishes to ignore the element can do so, and  
2136 return attributes just as if the element weren't present. A responder that wishes to reject use of the  
2137 element can do so by responding with the proposed error code.

2138 Proposed schema and text is below (lines based on core-19). The reference to a SAML status is  
2139 of course preliminary, pending final design of SAML status codes.

2140 In the AttributeQueryType type definition, add the following attribute before line 918:

2141 `<attribute name="Resource" type="anyURI" minOccurs="0"/>`

2142 Before line 907, add the following text:

2143 `<Resource> [Optional]`

2144 The <Resource> attribute specifies the URI of a resource which is relevant to the request for  
2145 attributes. If present, the responding entity MAY use the information in determining the set of  
2146 attributes to return to the requesting entity.

2147 If the responding entity does not wish to support resource-specific attribute queries, or if the  
2148 resource value provided is invalid or unrecognized, then it SHOULD respond with a SAML  
2149 status of "Error.Server.ResourceNotRecognized".

2150 <http://lists.oasis-open.org/archives/security-services/200112/msg00004.html>

2151 Champion: RL 'Bob' Morgan

2152 Status: Open

2153 ISSUE:[DS-9-12: Respondwith underspecified]

2154 At f2f#5 we agreed to include the "RespondWith" element. However, no agreement was reached  
2155 on the semantics of this element as well as its interaction with error conditions.

2156 Is this an advisory element (i.e., essentially useless)? If so, why are we including it in the draft?

2157 As an alternative it could be considered a hard requirement; in other words, if a requestor  
2158 submits a <RespondWith> value of "AuthenticationStatement", then the responder MUST  
2159 respond with an assertion containing an AuthenticationStatement OR return an error response.  
2160 Of course, this does not cover the case when multiple assertions are returned (e.g., lookup by  
2161 assertion id, for example). Does it mean every returned assertion MUST contain a  
2162 "Authentication Statement"?

2163 Additional example of complexity abound. Another example is given in message:

2164 <http://lists.oasis-open.org/archives/security-services/200201/msg00123.html>

2165 We have not discussed these processing rules at all. In their absence, the <RespondWith>  
2166 element adds additional complexity and confusion to the draft.

2167 Potential Resolutions:

- 2168 1. remove section 3.2.1.1 and the <RespondWith> element
- 2169 2. drastically simplify its contents (for example, we can probably give simple processing  
2170 rules for the schema URI case).
- 2171 3. provide detailed processing rules for all of the cases.

2172 <http://lists.oasis-open.org/archives/security-services/200201/msg00136.html>

2173 Champion: Prateek Mishra

2174 Status Open

2175

2175 **Group 10: Assertion Binding**

2176 CLOSED ISSUE:[DS-10-01: AttachPayload]

2177 There is a requirement for assertions to support some structure to support their "secure  
2178 attachment" to payloads. This is a blocking factor to creating a SOAP profile or a MIME profile.  
2179 If needed, the bindings group can make a design proposal in this space but we would like input  
2180 from the broader group.

2181 Status: Closed by vote on Jan 29, 2002. The SOAP Profile specifies two different ways to do  
2182 this.

2183

## 2183 **Group 11: Authorization Decision Assertions**

2184 DEFERRED ISSUE:[DS-11-01: MultipleSubjectAssertions]

2185 It has been proposed (WhiteboardTranscription-01.pdf section 4.0) that an Authorization  
2186 Decision Assertion Request (and presumably the Assertion sent in response) may contain  
2187 multiple subject Assertions (or their Ids). Must these assertions all refer to the same subject or  
2188 may they refer to multiple subjects.

2189 One view is that the assertions all provide evidence about a single subject who has requested  
2190 access to a resource. For example, the request might include a Authentication Assertion and one  
2191 or more Attribute Assertions about the same person.

2192 Another view is that for efficiency or other reasons it is desirable to ask about access to a  
2193 resource by multiple individuals in a single request. This raises the question of how the PDP  
2194 should respond if some subjects are allowed and others are not.

2195 The PDP might have the freedom to return a single, all encompassing Assertion in response or  
2196 reduce the request in order to give a positive response or return multiple Assertions with positive  
2197 and negative indications.

2198 Identified as F2F#3-30 and F2F#3-31.

2199 Possible Resolutions:

- 2200 1. Require that all the assertions and assertion ids in a request refer to the same subject.
- 2201 2. Treat assertions with different subjects as requesting a decision for each of the subjects  
2202 mentioned.
- 2203 3. Treat assertions with different subjects and a question about the collective group, i.e. true  
2204 only if access is allowed for all.
- 2205 4. Allow multiple subjects, but assign some other semantic to such a request.

2206 Status: Deferred by vote on Jan 29, 2002.

2207 CLOSED ISSUE:[DS-11-02: ActionNamespacesRegistry]

2208 Authorization Decision Assertions contain an object and an action to be performed on the object.  
2209 Different types of actions will be appropriate in different situations, so an action will be qualified  
2210 by an XML namespace. Should a public registry of namespaces be established somewhere? This  
2211 would allow groups applying SAML to different fields of interest to define appropriate syntaxes.

2212 This was identified as F2F#3-32. It relates to MS-2-01 and DS-7-02.

2213 Identified as CONS-14.

2214 Possible Resolutions:

2215 1. Establish an action namespace registry.

2216 2. Do not establish an action namespace registry.

2217 Status: Closed by vote on Jan 29, 2002. Resolution 1. The TC voted to maintain its own registry  
2218 at OASIS.

2219 CLOSED ISSUE:[DS-11-03: AuthzNDecAssnAdvice]

2220 Should Authorization Decision Assertions contain an Advice field? If so, what are the semantics  
2221 of Advice? It has been proposed that Conditions and Advice be fields that allow additional  
2222 information relative to the Assertion to be included. The distinction being that a relying party  
2223 could safely ignore items in Advice that it does not understand, but should discard an Assertion  
2224 if it does not understand all the Conditions.

2225 Such as scheme would allow for backward compatibility between SAML versions and/or the  
2226 possibility of proprietary usages.

2227 This was identified as F2F#3-33 and F2F#3-34.

2228 Note this is closely related to DS-14-01.

2229 Possible Resolutions:

2230 1. Include Advice in AuthZDecAssns.

2231 2. Do not include Advice in AuthZDecAssns.

2232 Status: Closed by vote on Sept 4. Current core specifies an Advice element in all Assertion types.

2233 CLOSED ISSUE:[DS-11-04: DecisionTypeValues]

2234 CONS-13 asks: does {Permit, Deny, Indeterminate} (as proposed in core12) cover the range of  
2235 decision answers we need? See also discussion in [ISSUE:F2f#3-33]. (This is DS-11-03, not  
2236 clear how this relates. ed.)

2237 Status: Closed by vote on Jan 29, 2002. These three values have been accepted.

2238 CLOSED ISSUE:[DS-11-05: MultipleActions]

2239 The F2F #3 left it somewhat unclear if multiple actions are supported within an <Object>. There  
2240 is clear advantage to this type of extension (as defined in core-12) as it provides a simple way to  
2241 aggregate actions. Given that actions are strings (as opposed to pieces of XML) this does seem to

- 2242 provide additional flexibility within the SAML framework.
- 2243 Does the TC support this type of flexibility?
- 2244 This was identified as CONS-15.
- 2245 Status: Closed by vote on Sept 4. Current schema allows multiple Actions to be specified.
- 2246 CLOSURE ISSUE:[DS-11-06: Authz Decision]
- 2247 Change the names of AuthorizationStatement and AuthorizationQuery to  
2248 AuthorizationDecisionStatement and AuthorizationDecisionQuery to eliminate ambiguity.
- 2249 Early in the process of this committee we decided, after much contention and explanation and  
2250 careful thought about concepts and terminology, that one of our three assertions (now statements,  
2251 of course) is an "Authorization Decision Assertion", where that name precisely captures the  
2252 intent of the structure. In particular we observed as part of that discussion that the single word  
2253 "authorization" by itself can mean so many different things that it has to be qualified to be  
2254 useful. The text of core-20, in section 1, uses the term "Authorization Decision Assertion", and  
2255 section 1.5 has this phrase as its title.
- 2256 However, the actual name of the element, as specified in section 1.5 and elsewhere, is  
2257 "AuthorizationStatement". And, the name of the corresponding query element, as specified in  
2258 section 2.5, is "AuthorizationQuery". It seems to me that these names are misleading and should  
2259 be changed. This is especially true since a likely user of our statement structures is the XACML  
2260 work, which (though I haven't followed it) is supposedly about managing and expressing  
2261 authorization information.
- 2262 So, I strongly suggest that these elements be renamed "AuthorizationDecisionStatement" and  
2263 "AuthorizationDecisionQuery" and that the corresponding types be similarly renamed.
- 2264 Champion: Bob Morgan
- 2265 Status: Closed by vote on Jan 29, 2002. The elements in question have been renamed.
- 2266
- 2267

2267 **Group 12: Attribute Assertions**

2268 CLOSED ISSUE:[DS-12-01: AnyAllAttrReq]

2269 Should an Attribute Assertion Request be allowed to specify “ANY” and/or “ALL”? If so, what  
2270 attributes should be returned and should an error be returned in for ANY and for ALL in each of  
2271 the following case:

2272 **[Text Removed to Archive]**

2273 Status: Closed by vote on Sept 4. At that time the core schema proposed a choice of “Partial” of  
2274 “AllOrNone” in the CompletenessSpecifier. (The CompletenessSpecifier was subsequently  
2275 dropped entirely.)

2276 CLOSED ISSUE:[DS-12-02: CombineAttrAssnReqs]

2277 It has been proposed (WhiteboardTranscription-01.pdf section 4.0) that it be possible 1) to  
2278 request all of the attributes of a subject and also 2) to request ANY and/or ALL attributes (with  
2279 specific error semantics. Can requests of type 1 and 2 be accommodated in a single request  
2280 structure? If not, the reasons for having distinct types should be documented.

2281 This was identified as F2F#3-21.

2282 PRO-03 asks if core-12 satisfies this issue.

2283 Possible Resolutions:

2284 1. Combine the requests.

2285 2. Leave them as distinct types and document the reason.

2286 Status: Closed by vote on Sept 4. Both all and specified attributes can be requested.

2287 DEFERRED ISSUE:[DS-12-03: AttrSchemaReqs]

2288 Should it be possible to request only the Attribute schema?

2289 This was identified as F2F#3-22.

2290 Possible Resolutions:

2291 1. Allow Attribute Schema Requests.

2292 2. Do not allow Attribute Schema Requests.

2293 Status: Deferred by vote on Jan 29, 2002.

2294 DEFERRED ISSUE:[DS-12-04: AttrNameReqs]

2295 Should it be possible to request only attribute names and not values? It is not clear whether these  
2296 would be all the attributes the Attribute Authority knows about or just the ones pertaining to a  
2297 particular subject. It is not clear what this would be used for. No usecase seems to require it.

2298 This was identified as F2F#3-23.

2299 This was identified as PRO-04.

2300 Possible Resolutions:

2301 3. Allow Attribute Name Requests.

2302 4. Do not allow Attribute Name Requests.

2303 Status: Deferred by vote on Jan 29, 2002.

2304 CLOSED ISSUE:[DS-12-05: AttrNameValueSyntax]

2305 What is the syntax of attribute names and values? Should attribute names be qualified by an xml  
2306 namespace? Should an attribute value be a monolithic opaque thing, with any internal syntax  
2307 agreed to out-of-band, or something with perceivable-in-protocol-context internal structure?  
2308 Does the use of XPath [<http://www.w3.org/TR/xpath>] in AttrAssnReqs mitigate the  
2309 restrictiveness of having attr values being monolithic opaque things, presumably where the value  
2310 is actually XML encoded and having arbitrarily complexity?

2311 • One possible approach is to use XPath in AttrAssnReqs.

2312 • Another approach is to define a very simple name/value pairs. A problem with this is  
2313 that, if the users/developers want to formulate any kind of structured values, they have to  
2314 flatten them into the SAML-defined thing. Thus the concern is how do we allow for  
2315 flexible (i.e. complex) value structures without unduly complicating AttrAssnReqs &  
2316 AttrAssnResps?

2317 This was identified as F2F#3-28, F2F#3-29 and F2F#3-37.

2318 PRO-06 asks if the simple queries proposed in core-12 are sufficient.

2319 Status: Closed by vote on Sept 4. Schema allows both names and values to have namespaces.

2320 ISSUE:[DS-12-06: RequestALLAttrbs]

2321 How should a request for all available attributes be made? Some have objected to the idea that if  
2322 no attributes are specified it means “all”.

2323 This should not be confused with the Completeness Specifier AllOrNothing (formerly ALL)

2324 which controls what should be returned when a request cannot be fully satisfied.

2325 Potential Resolutions:

2326 1. Declare an empty list of attributes to mean “all attributes.”

2327 2. Define a reserved keyword, such as “AllAttributes” for this purpose.

2328 Status: Open

2329 ISSUE:[DS-12-07: Remove AttributeValueType]

2330 It is proposed to remove the AttributeValue type and set the type of AttributeValue directly to  
2331 the anyType. This would remove nothing functionally from the AttributeValue and allows us to  
2332 do the sort of direct xsi:type-ing that Chris mentioned in his earlier posts.

2333 <http://lists.oasis-open.org/archives/security-services/200201/msg00019.html>

2334 <http://lists.oasis-open.org/archives/security-services/200112/msg00006.html>

2335 <http://lists.oasis-open.org/archives/security-services/200112/msg00025.html>

2336 Champion: RL 'Bob' Morgan

2337 Status: Open

2338

2338 **Group 13: Dynamic Sessions**

2339 DEFERRED ISSUE:[DS-13-01: SessionsinEffect]

2340 How can a relying party determine if dynamic sessions are in effect? If dynamic sessions are in  
2341 effect it will be necessary to determine if the session has ended, even if the relevant Assertions  
2342 have not yet expired. However, if dynamic sessions are not in use, attempting to check session  
2343 state is likely to increase response times unnecessarily.

2344 This was identified as F2F#3-3.

2345 Proposed Resolutions:

- 2346 1. Define a field in Assertion Headers to indicate dynamic sessions.  
2347 2. Configure the implementation based on some out of band information.

2348 Status: Deferred by vote on Jan 29, 2002.

2349

2349 **Group 14:General – Multiple Message Types**

2350 CLOSED ISSUE:[DS-14-01: Conditions]

2351 Should Assertions contain Conditions and if so, what items should be included under conditions  
2352 and what should the semantics of conditions be?

2353 It has been proposed that Conditions and Advice be fields that allow additional information  
2354 relative to the Assertion to be included. The distinction being that a relying party could safely  
2355 ignore items in Advice that it does not understand, but should discard an Assertion if it does not  
2356 understand all the Conditions.

2357 In addition to general design and rationale, the following questions have been posed. Should  
2358 Audience be under Conditions? Should Validity Interval be under Conditions? What sort of  
2359 extensibility should be allowed: upward compatibility between SAML versions? Proprietary  
2360 extensions? Other types?

2361 At F2F #3, the following straw poll results were obtained:

- 2362 • Yes, we want something with the semantic of "conditions" to appear in Assertions.
- 2363 • Yes, we need to re-work the design of conditions.
- 2364 • Yes, we want to place the validity interval into the conditions (However, it was noted that  
2365 doesn't this make validity interval optional? Do we want that?)
- 2366 • "Maybe" to providing a general conditions framework
- 2367 • "Maybe" to putting audiences into conditions

2368 This was identified as F2F#3-17 and F2F#3-18.

2369 Note this is closely related to DS-11-03.

2370 Core-12 addresses this issue with ConditionsType. CONS-07 asks: Does the ConditionsType  
2371 meet the TC's requirements? If not, why not?

2372 Status: Closed by vote on Sept 4. Schema contains a Conditions element.

2373 CLOSED ISSUE:[DS-14-02: AuthenticatorRequired]

2374 It has been proposed that an Assertion may contain an Authenticator element which can be used  
2375 in any of a number of ways to associate the Assertion with a request, either directly or indirectly  
2376 via some cryptographic primitive. Should this element be a part of SAML?

2377 Basically the question is whether the complexity associated with supporting this mechanism is

- 2378 absolutely required or simply “nice to have.”
- 2379 This has been identified as F2F#3-14.
- 2380 Potential Resolutions:
- 2381 1. Include the Authenticator element.
  - 2382 2. Do not include the Authenticator element.
- 2383 Status: Closed by vote on Jan 29, 2002. Core specifies a SubjectConfirmation element for this  
2384 purpose
- 2385 CLOSED ISSUE:[DS-14-03: AuthenticatorName]
- 2386 Assuming DS-14-02 is resolved affirmatively, should the Authenticator be called something  
2387 else? Suggestions include: HolderofKey and Subject Authenticator.
- 2388 This has been identified as F2F#3-10.
- 2389 Also identified as CONS-09.
- 2390 Status: Closed by vote on Sept 4. Schema now contains SubjectConfirmation element for this  
2391 purpose.
- 2392 DEFERRED ISSUE:[DS-14-04: Aggregation]
- 2393 Do we need an explicit element for aggregating multiple assertions into a single object as part of  
2394 the SAML specification? If so, what is the type of this element?
- 2395 This was identified as CONS-01.
- 2396 Status: Deferred by vote on Jan 29, 2002.
- 2397 CLOSED ISSUE:[DS-14-05: Version]
- 2398 Does the specification (core-12) need to further specify the version element? If so, what are these  
2399 requirements? Should this be a string? Or is an unsignedint enough?
- 2400 This was identified as CONS-06
- 2401 Status: Closed by vote on Jan 29, 2002. Core specifies major and minor version numbers, which  
2402 are integers. The protocol section describes matching rules.
- 2403 CLOSED ISSUE:[DS-14-06: ProtocolIDs]
- 2404 Core-12 proposes a <Protocol> element with the AuthenticatorType. CONS-10 suggests that the

2405 TC will develop a namespace identifier (e.g., protocol) and set of standard namespace specific  
2406 strings for the <Protocol> element above. If not, what approach should be taken here?

2407 Status: Closed by vote on Jan 29, 2002. SubjectConfirmationMethod serves this purpose.

2408 ISSUE:[DS-14-07: BearerIndication]

2409 Core-12 proposes the following for identifying a ``bearer'' assertion: A distinguished URI  
2410 urn:protocol:bearer be used as the value of the <Protocol> element in <Authenticator> with no  
2411 other sub-elements. CONS-11 asks: Is this an acceptable design?

2412 Status: Open

2413 CLOSED ISSUE:[DS-14-08: ReturnExpired]

2414 Should the specification make any normative statements about the expiry state of assertions  
2415 returned in response to SAMLRequests? Is it a requirement that only unexpired assertions are  
2416 returned, or is the client responsible for checking? (*Seems pretty clear that the client will have to*  
2417 *check anyway at time-of-use, so forcing the responder to check before replying seems like extra*  
2418 *processing.*)

2419 Note that regardless of how this issue is settled, Asserting Parties will be free to discard expired  
2420 Assertions at any time.

2421 Identified as PRO-01.

2422 Possible Resolutions:

- 2423 1. The specification will state that Asserting Parties MUST return only Assertions that have  
2424 not expired.
- 2425 2. The specification will state that Asserting Parties MAY return expired Assertions.
- 2426 3. The specification will make no statement about returning expired Assertions.

2427 Status: Closed by vote on Jan 29, 2002. Resolution 3 selected implicitly.

2428 CLOSED ISSUE:[DS-14-09: OtherID]

2429 PRO-01 states: in some instances (such as the web browser profile) it is necessary to lookup an  
2430 assertion using an identifier other than the <AssertionID>. Typically, such an identifier is opaque  
2431 and may have been created in some proprietary way by an asserting party. Do we need an  
2432 additional element in SAMLRequestType to model this type of lookup?

2433 Status: Closed by vote on Jan 29, 2002. Query by Artifact covers this functionality.

2434 CLOSED ISSUE:[DS-14-10: StatusCodes]

2435 PRO-07 asks: are the status codes listed for StatusCodeType (in core-12) sufficient? If not how  
2436 do we want to define a bigger list: keep it open with well-known values, use someone else's list,  
2437 define an extension system, etc.

2438 See also ISSUE:[F2F#3-33, 34].(Not clear the relationship. These issues are about Advice. ed.)

2439 Status: Closed by vote on Jan 29, 2002. Core specifies a Status element, which can contain  
2440 codes, subcodes, messages and details. Four basic status codes are defined.

2441 ISSUE:[DS-14-11: CompareElements]

2442 Should SAML specify the rules for comparing various identifiers, such as Assertion IDs, Issuer,  
2443 Security Domain, Subject Name? Currently these are all specified as strings. Issues include:

- 2444 • Upper and lower case equivalence
- 2445 • Leading and trailing whitespace
- 2446 • Imbedded whitespace

2447 Possible Resolutions:

- 2448 1. Declare only exact binary matching.
- 2449 2. Define a set of matching rules.

2450 Status: Open

2451 CLOSED ISSUE:[DS-14-12: TargetRestriction]

2452 Add a new condition type to the schema called TargetRestriction.

2453 The "Form POST" web browser profile of SAML (bindings-06, section 4.1.6) identifies a  
2454 particular security threat (4.1.6.1.1, bullet 3), which is that a malicious site, receiving an asserted  
2455 authentication statement via POST, might replay the assertion to some other site, in an attempt to  
2456 pose as the subject of the statement (ie, the authenticated user). The identified countermeasure  
2457 for this threat is to include information in the assertion that restricts its use to the site to which  
2458 the POST is done. In that case, if the malicious site attempts to replay the assertion somewhere  
2459 else, the receiver will see the mismatch and reject the assertion.

2460 Up to now the profile has called for the use of the AudienceRestrictionCondition element to  
2461 carry this information. However, we have argued that this condition, though similar, is actually  
2462 different in use, so a new condition is needed. There was discussion of this point at the recent  
2463 F2F in San Francisco, and the group agreed to add a new condition for this purpose.

2464 The justifications are as follows. First, the existing text on AudienceRestrictionCondition (core-  
2465 20, section 1.7.2) describes a more policy-based use, to limit the use of the assertion to receivers  
2466 conforming to some policy statement. Shibboleth, for example, would use this condition to  
2467 indicate that an assertion conforms to conditions including non-traceability of subject name, user  
2468 agreement with attribute release, etc. This description would have to be rewritten to also support  
2469 the more specific restriction required by the POST profile (which could be done).

2470 A more telling issue is matching. While the current description of Audience doesn't say how  
2471 matching is done (should it?), it seems likely that in practice these policy URIs would be  
2472 complete and opaque; that is, the receiver would simply do a string match on its available set of  
2473 policy URIs. A URI "http://example.com/policy1" has no necessary relation to  
2474 "http://example.com/policy2". On the other hand, for the POST profile, the most likely approach  
2475 would be for the assertion issuer to include the entire target URL in the assertion. The assertion  
2476 receiver would then have to match on some substring of the URL to determine whether to accept  
2477 the assertion. If the same condition were to be used for both purposes the receiver would have to  
2478 do matching based on the value of the URI, which seems suboptimal.

2479 Cardinality is another issue. It's reasonable for multiple AudienceRestriction elements to be  
2480 included to indicate that the recipient should be bound by all the indicated policies. But it  
2481 doesn't really make sense to say the recipient has to be named by multiple names.

2482 Champion: Bob Morgan

2483 Status: Closed by vote on Jan 29, 2002. Target has been added.

2484 CLOSED ISSUE:[DS-14-13: StatusCodes]

2485 How should SAML Requests report errors? Many suggestions have been made, ranging from a  
2486 simple list of error codes to adopting SOAP error codes. Scott proposes:

2487 SAML needs an extensible, more flexible status code mechanism. This proposal is a hierarchical  
2488 Status structure to be placed inside Response as a required element. The Status element contains  
2489 a nested Code tree in which the top level Value attribute is from a small defined set that SAML  
2490 implementations must be able to create/interpret, while allowing arbitrary detail to be nested  
2491 inside, for applications prepared to interpret further.

2492 I mirrored some of SOAP's top level fault codes, while keeping SAML's Success code, which  
2493 doesn't exist in SOAP, since faults mean errors, not status. I also eliminated the Error vs Failure  
2494 distinction, which seems to be intended to "kind of" mean Receiver/Sender, which is better made  
2495 explicit. Unknown didn't make sense to me either. Please provide clarifications if these original  
2496 codes should be kept.

2497 The proposed schema is as follows, replacing the current string enumeration of StatusCodeType  
2498 with the new complex StatusType:

2499 <simpleType name="StatusCodeEnumType">

```

2500 <restriction base="QName">
2501   <enumeration value="samlp:Success"/>
2502   <enumeration value="samlp:VersionMismatch"/>
2503   <enumeration value="samlp:Receiver"/>
2504   <enumeration value="samlp:Sender"/>
2505 </restriction>
2506 </simpleType>
2507 <complexType name="StatusCodeType">
2508   <sequence>
2509     <element name="Value" type="samlp:StatusCodeEnumType"/>
2510     <element name="Code" type="samlp:SubStatusCodeType"
2511 minOccurs="0"/>
2512   </sequence>
2513 </complexType>
2514 <complexType name="SubStatusCodeType">
2515   <sequence>
2516     <element name="Value" type="QName"/>
2517     <element name="Code" type="samlp:SubStatusCodeType"
2518 minOccurs="0"/>
2519   </sequence>
2520 </complexType>
2521 <complexType name="StatusType">
2522   <sequence>
2523     <element name="Code" type="samlp:StatusCodeType"/>
2524     <element name="Message" type="string" minOccurs="0"
2525 maxOccurs="unbounded"/>
2526     <element name="Detail" type="anyType" minOccurs="0"/>
2527   </sequence>
2528 </complexType>
2529 In Response, delete the StatusCode attribute, and add:
2530 <element name="Status" type="samlp:StatusType"/>
2531 Champion: Scott Cantor
2532 Status: Closed by vote on Jan 29, 2002. Core specifies a Status element, which can contain
2533 codes, subcodes, messages and details. Four basic status codes are defined.
2534 ISSUE:[DS-14-14: ErrMsg in Multiple Languages]
2535 Should SAML allow status messages to be in multiple natural languages?
2536 In core-25, StatusMessage is defined (Section 3.4.3.3, lines 1183-1187) as being of type string.
2537 Its inclusion in the Status element (lines 1114-1115) allows multiple occurrences, that is, zero or

```

2538 more messages per status returned. In the call on Tuesday we discussed the potential need to  
2539 allow for multiple natural-language versions of status messages.

2540 If the StatusMessage element can't contain markup, then it makes it hard for someone to provide,  
2541 say, both English and Japanese versions of an error message. Here are two obvious different  
2542 ways to do this, both using the native xml:lang attribute to indicate the language in which the  
2543 message is written.

2544 (See also a possible SEPARATE issue at the bottom of this message.)

2545 =====

2546 Option 1: Multiple StatusMessage elements, each with language indicated

2547 Currently, multiple StatusMessages are already allowed, but we say nothing in the spec to  
2548 explain how they're supposed to be used or interpreted. The description just says (lines 1105-  
2549 1106):

2550 <StatusMessage> [Any Number]

2551 A message which MAY be returned to an operator.

2552 (Hmm, not sure what "operator" means here..) This option would place a specific interpretation  
2553 on the appearance of multiple StatusMessage elements related to language differentiation, and  
2554 would allow for an optional xml:lang attribute on the element:

2555 <StatusMessage> [Zero or more]

2556 A natural-language message explaining the status in a human-readable way. If more than  
2557 one <StatusMessage> element is provided, the messages are natural-language equivalents  
2558 of each other; in this case, the xml:lang attribute SHOULD be provided on each element.

```
2559 <element name="StatusMessage">
2560   <complexType>
2561     <simpleContent>
2562       <extension base="string">
2563         <attribute name="xml:lang" type="language"/>
2564       </extension>
2565     </simpleContent>
2566   </complexType>
2567 </element>
```

2568 I prefer this option because it has less markup overhead, as long as the multiple  
2569 <StatusMessage> elements already allowed in the schema weren't intended to have some other  
2570 meaning instead (in which case, that meaning needs to be documented). If they weren't, then if  
2571 this option \*isn't\* picked, I think we need to shut down multiple occurrences of  
2572 <StatusMessage>, changing it to minOccurs="0" and maxOccurs="1".

2573

2574

Option 2: One StatusMessage element, with partitioned content indicating language

2575

This option isn't all that different from option 1. It would invent a new subelement to go into the content of <StatusMessage> like so:

2576

2577

<StatusMessage>

2578

A natural-language message explaining the status in a human-readable way. It contains one or more <MessageText> elements, each providing different natural-language equivalents of the same message.

2579

2580

2581

<element name="StatusMessage" type="StatusMessageType" />

2582

<complexType name="StatusMessageType">

2583

<sequence>

2584

<element ref="MessageText" maxOccurs="unbounded" />

2585

</sequence>

2586

</complexType>

2587

<MessageText>

2588

The text of the status message. If more than one <MessageText> element is provided, the messages are natural-language equivalents of each other; in this case, the xml:lang attribute SHOULD be provided on each element.

2589

2590

2591

<element name="MessageText">

2592

<complexType>

2593

<simpleContent>

2594

<extension base="string">

2595

<attribute name="xml:lang" type="language"/>

2596

</extension>

2597

</simpleContent>

2598

</complexType>

2599

</element>

2600

I think this option is necessary \*if\* multiple occurrences of <StatusMessage> were already intended to have some other meaning. If they weren't, then I prefer option 1.

2601

2602

2603

Digression on xml:lang

2604

You can read about this attribute here:

2605

Brief description of the xml: namespace:

2606

<http://www.w3.org/XML/1998/namespace.html>

2607 Section of the XML spec itself that defines xml:lang:

2608 <http://www.w3.org/TR/REC-xml#sec-lang-tag>

2609 There is also a non-normative but helpful schema module that defines the items in the xml:  
2610 namespace. You can find it here:

2611 <http://www.w3.org/XML/1998/namespace.xsd>

2612 This schema module can be useful if you want to slurp those definitions into the SAML schemas  
2613 to make sure that SAML instances can be fully validated. Alternatively, we can legally cook up  
2614 our own schema code for this as shown in the two options above, which would avoid importing  
2615 another schema module into both of ours, with attendant code and documentation. If we do that,  
2616 note that we'll still need to declare the xml: namespace at the tops of our schema modules.

2617 =====

2618 Final thoughts

2619 Even if the issue of multiple-language support is deferred until a future release, I believe that  
2620 <StatusMessage> and the fact that it's repeatable is underspecified at the moment. I would like  
2621 to see it restricted to an optional single occurrence, or alternatively, I would like to have its  
2622 semantics explained when multiple occurrences are used. This can be listed as a separate issue if  
2623 you like.

2626 Status: Open

2627 ISSUE:[DS-14-15: Version Synchronization]

2628 What is the relationship between the version of the Assertions, Requests and Responses? Should  
2629 the values always be the same or can they change independently of each other?

2630 Potential Resolutions:

- 2631 1. Requests and Responses each have Major/Minor version info attributes, which implies that,  
2632 in theory, they could be upgraded independently (I didn't see where this is explicitly  
2633 prohibited). If so, Line 1228-1229 should be explicit: "This document defines SAML  
2634 Assertions 1.0, SAML Request Protocol 1.0, and SAML Response Protocol 1.0".
- 2635 2. If the intent is to keep the request and response protocols synchronized with a single SAML  
2636 protocol version (separate from the assertion version), then the RequestAbstractType type  
2637 (3.2.1) and the ResponseAbstractType type (3.4.1) should replace the MajorVersion and  
2638 MinorVersion attributes with a new <ProtocolVersionInfo> element defined something like:

```
2639 <element name="ProtocolVersionInfo" type="saml:ProtocolVersionInfoType"/>
2640 <complexType name="ProtocolVersionInfoType">
2641     <attribute name="MajorVersion" type="integer" use="required"/>
2642     <attribute name="MinorVersion" type="integer" use="required"/>
2643 </complexType>
```

2644 3. If the intent is to keep the version info synchronized for assertions, request protocol, and  
2645 response protocol, then we could use the following in the <assertion> element (2.3.3) and the  
2646 request/response abstract types could include the <VersionInfo> element:

```
2647 <element name="VersionInfo" type="saml:VersionInfoType"/>
2648 <complexType name="VersionInfoType">
2649     <attribute name="MajorVersion" type="integer" use="required"/>
2650     <attribute name="MinorVersion" type="integer" use="required"/>
2651 </complexType>
```

## 2663 **Group 15:Elements Expressing Time Instants**

2664 ISSUE:[DS-15-01: NotOnOrAfter]

2665 What should be the semantics of the specifier of the end of a time interval?

2666 Stephen Farrell commented:

2667 NotOnOrAfter. This is different from most end-date types specified elsewhere, in particular the  
 2668 notAfter field in many ASN.1 structures. There is no justification given for this semantic change  
 2669 which will cause new boundary conditions and hence new (probably broken) code. For example,  
 2670 if an issuer has an X.509 certificate with a notAfter of 20021231235959Z then what is the latest  
 2671 NotOnOrAfter value that should result in a valid assertion? What is the first NotOnOrAfter value  
 2672 that should result in an assertion being invalidated for this reason? I don't know the answers.  
 2673 Gratuitous changes are bad things. This is one such.

2674 RL "Bob" Morgan added:

2675 I agree that in this case consistency with X.509 Validity field:

```
2676 Validity ::= SEQUENCE {
2677     notBefore    Time,
2678     notAfter     Time }
```

2679 makes good sense, and support changing the NotOnOrAfter Condition attribute to "NotAfter". Is  
 2680 there some good argument as to why it should be NotOnOrAfter?

2681 <http://lists.oasis-open.org/archives/security-services/200201/msg00192.html>

2682 Phill Hallam-Baker replied:

2683 The problem with the X.509 approach is that it leads to a complex ambiguity in interpretation.

2684 To put it another way, Steve has a problem because X.509 is confused and broken.

2685 The problem with the X.509 approach is that it requires a very peculiar interpretation of the  
 2686 NotAfter time. Say we have 23:59:59, we have to consider the cert valid on 23:59:59.00 which is  
 2687 expected but also 23:59:59.01 which is not.

2688 The mapping from X.509 to notOnOrAfter is actually straightforward, you just have to add on  
 2689 the resolution of the time value which is almost always a second.

2690 The alternative is that every SAML implementation has to do the same thing every time a time is  
 2691 measured.

2692 What is easier to code

2693 SAML

2694 if ( NotBefore <= time AND time < NotOnOrAfter )

2695 X.509

2696 if ( NotBefore <= time AND trunc (time, NotAfter.resolution) <NotAfter )

2697 Where NotAfter.resolution gives the resolution to which NotAfter is specified.

2698 The reason I want to make the change is that practically every X.509 implementation handles  
2699 time in a subtly different way. I believe that having a clearer set of semantics will make it easier  
2700 to get interoperability.

2701 <http://lists.oasis-open.org/archives/security-services/200201/msg00209.html>

2703 Status: Open

2704 ISSUE:[DS-15-02: Timezones]

2705 Should SAML allow times to specify a timezone? Implicitly or explicitly? Daylight savings  
2706 time?

2707 Phill Hallam-Baker wrote:

2708 I have no problems with stating that all times must be in UTC. I am somewhat less sure as to the  
2709 best way to manage the timezone issue. One way is to state that all times MUST be expressed in  
2710 GMT, i.e. the timezone offset is zero. Another is to allow the use of local timezone offsets so that  
2711 the local and GMT time are both known.

2712 The concern is what to do if an application inserts a local timezone. Should it be permissively  
2713 accepted or definitively rejected. I think that we should either insist on GMT and require  
2714 processors to reject timezone offsets or allow explicit to allow numeric timezone offsets. Named  
2715 timezones are obviously right out.

2716 <http://lists.oasis-open.org/archives/security-services/200201/msg00258.html>

2717 Champion: Phill Hallam-Baker

2718 Status: Open

2719 ISSUE:[DS-15-3: Time Granularity]

2720 Should SAML restrict time instants to a granularity of one second as X.509 does? Or permit  
2721 arbitrary fractions of a second to be specified or something else?

2722 Rich Salz commented:

- 2723 Subsecond resolution bothers me because XML Schema is silent on the matter of roundoff  
2724 errors, etc., between lexical form and native form, and back. See archives for discussion of  
2725 "round-tripping," e.g. If we need subsecond, then let's say msec and allow .000 only.
- 2726 <http://lists.oasis-open.org/archives/security-services/200201/msg00261.html>
- 2727 Phill Hallam-Baker responded:
- 2728 I don't believe that there is a requirement to support round tripping which is robust enough to  
2729 preserve a digital signature. And if there was I certainly don't think that it is likely to be meetable  
2730 in practice. I am not aware that the feature has been used to any advantage in X.509. The DER  
2731 encoding that it required was probbaly the single biggest impediment to getting interoperability  
2732 and deployment of X.509.
- 2733 If you want to regenerate the original document or node then store that instead of the signature.  
2734 Disks are cheap, even RAM is cheap.
- 2735 <http://lists.oasis-open.org/archives/security-services/200201/msg00278.html>

- 2738

2738 **Miscellaneous Issues**

2739 **Group 1: Terminology**

2740 CLOSED ISSUE:[MS-1-01: MeaningofProfile]

2741 The bindings group has selected the terminology:

- 2742 • SAML Protocol Binding, to describe the layering of SAML request-response messages  
2743 on "top" of a substrate protocol, Example: SAML HTTP Binding (SAML request-  
2744 response messages layered on HTTP).
- 2745 • a profile for SAML, to describe the attachment of SAML assertions to a packaging  
2746 framework or protocol, Example: SOAP profile for SAML, web browser profile for  
2747 SAML

2748 This terminology needs to be reflected in the requirements document, where the generic term  
2749 "bindings" is used. It needs also to be added to the glossary document.

2750 The conformance group has used the term Profile to define a set of SAML capabilities, with a  
2751 corresponding set of test cases, for which an implementation or application can declare  
2752 conformance. This use of profile is consistent with other conformance programs, as well as in  
2753 ISO/IEC 8632. In order to resolve this conflict, the conformance group has proposed, in sstc-  
2754 draft-conformance-spec-004, to substitute the word partition instead.

2755 Status: Closed by vote on Sept 4. The terminology of the bindings group, as specified in the  
2756 second bullet point above, has been accepted by the TC.

2757

2757 **Group 2: Administrative**

2758 CLOSED ISSUE:[MS-2-01: RegistrationService]

2759 There is a need for a permanent registration service for publishing bindings and profiles. The  
2760 bindings group specification will provide guidelines for creating a protocol binding or profile,  
2761 but we also need to point to some form of registration service.

2762 DS-7-02: AuthN Method also implies a need to register AuthN methods.

2763 How can we take this forward? Is OASIS wiling to host a registry?

2764 Another possibility is IANA.

2765 Status: Closed by vote on Jan 29, 2002. The TC voted to host this at OASIS.

2766 ISSUE:[MS-2-02: Acknowledgements]

2767 What is a consistent and fair way to list the editors and contributors to the specifications?

2768 Eve Maler made a proposal hers:

2769 <http://lists.oasis-open.org/archives/security-services/200202/msg00090.html>

2770 Champion: Eve Maler

2771 Status: Open

2772

2772 **Group 3: Conformance**

2773 CLOSED ISSUE:[MS-3-01: BindingConformance]

2774 Should protocol bindings be the subject of conformance? The bindings sub group is defining  
2775 both SAML Bindings and SAML Profiles. It has been proposed that both of these would be the  
2776 subject of independent conformance tests.

2777 The following definitions have been proposed:

2778 **SAML Binding:** SAML Request/Response Protocol messages are mapped onto underlying  
2779 communication protocols. (SOAP, BEEP)

2780 **SAML Profile:** formats for combining assertions with other data objects. These objects may be  
2781 communicated between various system entities. This might involve intermediate parties.

2782 This suggests that a Profile is a complete specification of the SAML aspects of some use case. It  
2783 provides all the elements needed to implement a real world scenario, including the semantics of  
2784 the various SAML Assertions, Requests and Responses.

2785 A Binding would simply specify how SAML Assertions, Requests and Responses would be  
2786 carried by some protocol. A Binding might be used as a building block in one or more Profiles,  
2787 or be used by itself to implement some use case not covered by SAML. In the later case, it would  
2788 be necessary for the parties involved to agree on all aspects of the use case not covered by the  
2789 Binding.

2790 Thus conformance testing of Bindings might be undesirable for two related reasons:

- 2791
- The number of independent test scenarios is already large. It seems undesirable to test something that does not solve a complete, real-world problem.
  - Parties would be able to claim “SAML Conformance” by conforming to a Binding, although they would not be able to actually interoperate with others in a practical situation, except by reference to a private agreement. This would likely draw a negative response from end users and other observers.
- 2792
- 2793
- 2794
- 2795
- 2796

2797 The advantages of testing the conformance of Bindings include:

- 2798
- Simplifying testing procedures when a Binding is used in several Profiles that a given party wishes to conform to.
  - Allow SAML to be used in scenarios not envisioned by the Profiles.
- 2799
- 2800

2801 This was identified as F2F#3-2.

2802 Possible Resolutions:

2803 1. Make Bindings the subject of conformance.

2804 2. Do not make Bindings the subject of conformance.

2805 Status: Closed by vote on Sept 4. The conformance group has made a proposal which has been  
2806 accepted by the TC.

2807 CLOSED ISSUE:[MS-3-02: Browser Partition]

2808 Should the Web Browser be a SAML Conformance Partition, different from the Authentication  
2809 Authority partition?

2810 This was identified as F2F#3-7.

2811 Status: Closed by vote on Sept 4. The Browser is not a partition.

2812 ISSUE:[MS-3-03: Unbounded Elements]

2813 Should elements be defined with maxOccurs="unbounded"? If yes then should the number of  
2814 occurrences be limited in the conformance tests or elsewhere?

2815 Stephen Farrell wrote:

2816 Why allow "unbounded" anywhere? I see no reason why 10000000000 statements MUST be  
2817 supported, which is what seems to be implied. Suggest including a max value that  
2818 implementations MUST support, to be the same for all cases of "unbounded". Either incorporate  
2819 this into the schema (e.g. "maxOccurs=1000") or into text (considering how versioning is  
2820 currently done).

2821 RL "Bob" Morgan replied:

2822 I'm no schema expert, but it seems to me that putting something like "maxOccurs=1000" into the  
2823 schema isn't the right thing, since it makes sending 1001 of something invalid, where what we  
2824 want to say is just that it's not guaranteed to be interoperable.

2825 I agree with the sentiment, but the stating of "must handle at least N" seems to me to be much  
2826 more appropriate for the conformance document, though I have to say I can't quite see where it  
2827 would go in the current doc. But it would be necessary, I think, for conformance tests to include  
2828 handling multiple instances of all the possibly-multiple items up to the stated limits.

2829 <http://lists.oasis-open.org/archives/security-services/200201/msg00191.html>

2830 Champion: RL "Bob" Morgan

2831 Status: Open

2832

2832 **Group 4: XMLDSIG**

2833 CLOSED ISSUE:[MS-4-01: XMLDsigProfile]

2834 SAML should define an XMLDsig profile specifying which options may be used in SAML, in  
2835 order to achieve interoperability.

2836 One aspect of this is: which of the signature types: enveloped, enveloping and detached should  
2837 be supported? See also Issues UC-7-01 and UC-7-02.

2838 Status: Closed by vote on Jan 29, 2002. Core contains an XMLDsig profile.

2839 CLOSED ISSUE:[MS-4-02: SOAP Dsig]

2840 Exactly how should the use of digital signatures be specified in the SOAP profile?

2841 The SOAP profile in the bindings-06 draft specifies that all SOAP messages which include  
2842 SAML assertions must be signed. The current signature requirements are too restrictive; in  
2843 particular, they are not compatible with SOAP header elements that have "actor" attributes.

2844 I propose that we change lines 828-829 and 978-979 (.pdf version) to read:

2845 The <dsig:Signature> element MUST apply to all the SAML assertion elements in the SOAP  
2846 <Header>, and all the relevant portions of the SOAP <Body>, as required by the application.  
2847 Specific applications may require that the signature also apply to additional elements.

2848 (Do we need to say anything about whether the receiver should rely on unsigned portions of the  
2849 SOAP message? My first inclination is that it's up to the application, so we shouldn't say  
2850 anything. Perhaps we need something in security considerations?)

2851 Champion: Irving Reid

2852 Status: Closed by vote on Jan 29, 2002. The proposed changes have been made.

2853

## 2853 **Group 5: Bindings**

2854 CLOSED ISSUE:[MS-5-01: SSL Mandatory for Web]

2855 Should use of SSL be mandatory for the Web Browser Profile?

2856 The issue originates from the mandatory use of HTTP(S) in 4.1.4.1 (SAML Artifact) and 4.1.4.3  
2857 (Form POST) between the browser equipped user and source and destination sites respectively.

2858 The essential issue therein is confidentiality of the SAML artifact (4.1.4.1) or SAML assertions  
2859 (4.1.4.3). If we do not use HTTPS, the HTTP traffic between the user and source or destination  
2860 can be copied and used for impersonation.

2861 There was concern at this requirement at the F2F#4 and as Gil is away the action item has fallen  
2862 to me. But I am genuinely puzzled as to how we can move away from this requirement.

2863 (1) Should the text merely state that confidentiality is a requirement (MUST) (could be met in  
2864 some unspecified way?) and that HTTPS MAY be used? I am opposed to this formulation as it is  
2865 not specific enough to support inter-operability. How can a pair of sites collaborate to support the  
2866 web browser profile if each uses some arbitrary method for confidentiality?

2867 (2) Another approach would be to require confidentiality (MUST) and specify HTTPS as a  
2868 mandatory-to-implement feature. Those sites that prefer to use some other method for  
2869 confidentiality can do so, but all sites must also support HTTPS. This ensures inter-operability as  
2870 we can always fall back on HTTPS.

2871 Champion: Prateek Mishra

2872 Status: Closed by vote on Jan 29, 2002. The Profiles in question state that confidentiality and  
2873 integrity MUST be maintained, but that use of SSL/TLS is only RECOMMENDED

2874 CLOSED ISSUE:[MS-5-02: MultipleAssns per Artifact]

2875 In the browser artifact profile as described in the bindings-06 document, section 4.1.5, lines 565-  
2876 567 imply that more than one authentication assertion could be transferred. This raises all sorts  
2877 of questions about how the receiver should behave, particularly if the authn assertions refer to  
2878 different subjects.

2879 Do we want to say anything more about this? Alternatives include:

2880 (a) Make no changes to the spec. Implementers are free to choose whatever behavior they think  
2881 is appropriate for their solution.

2882 (b) Specify that all authn assertions must contain the same Subject (or at least, the same  
2883 NameIdentifier within the Subject)

2884 (c) Specify exactly how the receiver should behave. Two possibilities are to say that access

2885 should be allowed if any one of the Subjects would be allowed, or that access should only be  
2886 allowed if all of the Subjects are allowed.

2887 My life would be easiest if we choose (b), though I could see how it might be too severe a  
2888 constraint on some applications.

2889 Champion: Irving Reid

2890 Status: Closed by vote on Jan 29, 2002. Browser Artifact Profile specifies the use of multiple  
2891 Artifacts, each one corresponding to one assertion

2892 CLOSED ISSUE:[MS-5-03: Multiple PartnerIDs]

2893 Can a single URL contain handles to more than one PartnerID?

2894 In Prateek's bindings-06 document on lines 518-519, when a user is transferred, more than one  
2895 SAML Artifact could be passed on the URL.

2896 The first question this raises is: can the artifacts contain more than one PartnerID? In the  
2897 paragraph at lines 536-541, the description implies that all the assertions are pulled at once. This  
2898 won't work if the artifacts have different PartnerIDs, and the partners have different access  
2899 URLs.

2900 I'd like to propose an addition to the paragraph at 518-519, adding the sentence:

2901 When more than one artifact is carried on the URL query string, all the artifacts MUST have the  
2902 same PartnerID.

2903 Champion: Irving Reid

2904 Status: Closed by vote on Jan 29, 2002. PartnerID is now called SourceID. The Profile states that  
2905 all the SourceIDs must be the same.

2906 ISSUE:[MS-5-04: Use Response in POST]

2907 Should the Web Browser POST Profile return an Assertion or a Response containing an  
2908 Assertion in the hidden field of the form?

2909 RL "Bob" Morgan wrote:

2910 As we were developing the POST profile there was discussion about whether features in the  
2911 SAML assertion are sufficient to provide countermeasures for the various threats that we  
2912 recognize, or whether additional "packaging" (to use Marlina's term) is needed. There were  
2913 good reasons why "packaging" would be useful but I think there was resistance to developing  
2914 some new structure just for this purpose. Hence we decided to add the TargetRestriction  
2915 condition to the Assertion, and to use a short validity period in the Assertion, as major  
2916 mechanisms to deal with threats.

- 2917 This had been simmering with me before, but Stephen Farrell's comment:
- 2918 Inclusion of both Audience and Target conditions is pointless and broken. Delete one, or  
2919 show they're different.
- 2920 pushed me over the edge; also recent changes to the Response object. In this note I propose that  
2921 we change the POST profile so that a SAML Response object is sent rather than just an  
2922 Assertion. This is in the spirit of the former "packaging" idea but uses a standard already-  
2923 defined object (with one proposed change). I think those of us who care about the POST profile  
2924 would like to see this change be made.
- 2925 The details of the proposal are that (sorry no actual text yet):
- 2926 (a) the POST profile be modified so that the object sent in the POST is a SAML Response
- 2927 (b) that this Response always be XML-DSIG-signed, and the contained Assertion(s) need not be  
2928 signed (but could be);
- 2929 (c) the TargetRestrictionCondition be removed from the Conditions element in the Assertion and  
2930 instead be made an optional element of the Response object;
- 2931 (d) the new IssueInstant element of the Response be checked by the POST receiver to ensure that  
2932 the Response is recently-generated;
- 2933 (e) the InResponseTo attribute of the Response object be set to some distinguished value  
2934 indicating "not in response to a request", eg the empty string.
- 2935 This would have the benefits of (at least):
- 2936 (1) This clarifies the distinction between Target and Audience, since they're now attached to  
2937 different objects. IMHO Target is more appropriately applied to a Response object rather than  
2938 the Assertion anyway, since it's really a restriction on how-the-thing-was-sent rather than the  
2939 thing itself.
- 2940 (2) For both target-checking and timestamp-checking, having values in a well-known single  
2941 place in the single Response object is much more clear than having to rely on Target/Validity  
2942 values in the potentially many Assertions that might be sent, which might have ambiguous  
2943 values.
- 2944 (3) The validity period in a POSTed Assertion (or set of Assertions) can be (somewhat) longer,  
2945 hence it could be pre-generated; though we may still want to suggest some short limit for the end  
2946 of the Assertion validity period.
- 2947 (4) A Response can be generated by the inter-site transfer site even when an Assertion can not be  
2948 (eg "user cancelled login operation") and can communicate error conditions via Status, which  
2949 otherwise can't be done.

2950 (5) POST and Artifact will both result in Responses being received by the target, which permits  
2951 much more consistency in their handling, greatly easing implementations that want to support  
2952 both.

2953 Possible objections (and responses to them) might be:

2954 (i) The proposed Response is not issued in response to a Request. This doesn't seem like much  
2955 of an argument to me. If the structure is useful, let's use it; I think there are lots of existing  
2956 protocols where "unsolicited responses" exist for this same sort of reason.

2957 (ii) The IssueInstant which is to be added to the Response schema only specifies what could be  
2958 thought of as a start time for a validity period for the Response, rather than both start and end as  
2959 Assertion Validity does. I do not think that this is a concern, because ultimately the decision on  
2960 length of time that the receiver is prepared to accept this Response is up to the receiver; that is, if  
2961 (under the current format) an asserter puts in a Validity of, say, a 24-hour duration, a reasonable  
2962 receiver will still reject this after just a few minutes. So having only an IssueInstant and letting  
2963 the receiver base its decision on this seems fine to me. Alternatively, if folks felt strongly,  
2964 another value could be added to the schema to express the end-of-validity time (but I think this is  
2965 unnecessary).

2967 Champion: RL "Bob" Morgan

2968 Status: Open

2969

## 2969 Document History

- 2970 • 5 Feb 2001 First version for Strawman 2.
- 2971 • 26 Feb 2001 Made the following changes:
  - 2972 • Changed references to [SAML] to SAML.
  - 2973 • Added rewrites of Group 1 per Darren Platt.
  - 2974 • Added rewrites of Group 3 per David Orchard.
  - 2975 • Added rewrites of Group 5 per Prateek Mishra.
  - 2976 • Added rewrites of Group 11 per Irving Reid.
  - 2977 • Converted the abbreviation "AuthC" (for "authentication") to "AuthN."
  - 2978 • Added Group 13.
  - 2979 • Added UC-1-12:SignOnService.
  - 2980 • Converted candidate requirement naming scheme from [R-Name] (as used in the
  - 2981 main document) to [CR-issuenumbr-Name], per David Orchard.
  - 2982 • Added UC-0-02:Terminology.
  - 2983 • Added UC-0-03:Arrows.
  - 2984 • Updated UC-9-02:PrivacyStatement with suggested requirements from Bob
  - 2985 Morgan and Bob Blakley.
  - 2986 • Added UC-1-13:ProxyModel per Irving Reid.
  - 2987 • Added status indications for each issue.
  - 2988 • Recorded votes and conclusions for issue groups 1, 3, and 5.
  - 2989 • Added Zahid Ahmed's use cases for B2B transactions.
  - 2990 • Added Maryann Hondo's use case scenario for ebXML.
  - 2991 • Added comments to votes by Jeff Hodges, Bob Blakley.
- 2992 • 10 Apr 2001 Made the following changes:
  - 2993 • Added re-written versions of issue group 2, 3, 6, 7, 8, 9, 10, and 13 by Darren

- 2994 Platt and Evan Prodromou.
- 2995
- Added re-written versions of issue groups 11 and 12 by Irving Reid.
- 2996
- Added re-written version of issue group 4 by Prateek Mishra.
- 2997
- Added voting results for groups 2, 3, 4, 6, 7, 8, 9, 10, 11, 12, and 13.
- 2998
- 22 May 2001 Made the following changes:
- 2999
- Changed introduction to reflect conversion to general issues list
- 3000
- Added color scheme
- 3001
- Closed large number of issues per F2F #2
- 3002
- Changed OSSML to SAML everywhere
- 3003
- Added design issues section and groups 1-4
- 3004
- Added UC-13-07
- 3005
- Various minor edits
- 3006
- 25 May 2001 Made the following changes
- 3007
- Various format improvements
- 3008
- Closed all Group 0 issues
- 3009
- Added DS-4-04
- 3010
- Did NOT promote blue issues to gray
- 3011
- 11 June 2001 Made the following changes
- 3012
- Various format improvements, CLOSED in headers
- 3013
- Renumber Anonymity to DS-1-02 (was a duplicate)
- 3014
- Changed all Blue to Gray
- 3015
- Downgraded from Yellow to White UC-13-07, DS-1-01, DS-1-02, DS-4-02 (no
- 3016
- recent discussion)
- 3017
- Closed DS-2-01 Wildcarded Resources
- 3018
- Added new text for DS-3-01, DS-3-02, DS-4-04

- 3019
  - Added DS-2-02, Groups 5,6,7,8 and 9
- 3020
  - 18 June 2001 Made the following changes
- 3021
  - Changed from Blue to Gray DS-2-01
- 3022
  - Downgraded from Yellow to White UC-13-07, DS-2-02, DS-3-01, DS-3-02, DS-3-03, DS-6-01, DS-6-02, DS-6-03, DS-6-04, DS-7-01, DS-7-02, DS-7-03, DS-8-01, DS-8-02, DS-9-01
- 3023
- 3024
- 3025
  - Created Miscellaneous Issues section, added MS-1-01 and MS-2-01
- 3026
  - Created issue DS-10-01
- 3027
  - Modified DS-4-01 & DS-4-03
- 3028
  - 9 August 2001 Made the following changes
- 3029
  - Removed text and voting summaries from old, closed issues
- 3030
  - Created issues DS-1-03, DS-1-04, DS-1-05, DS-4-05, DS-4-06, DS-4-07, DS-7-04, DS-7-05, DS-8-03, DS-8-04, DS-11-01 thru DS-11-05, DS-12-01 thru DS-12-05, DS-13-01, DS-14-01 thru DS-14-10, MS-3-01, MS-3-02
- 3031
- 3032
- 3033
  - Modified DS-4-04, DS-8-02
- 3034
  - Color changes to reflect recent discussions
- 3035
  - 22 August 2001 Made the following changes
- 3036
  - Created issues: UC-14-01, DS-7-06, DS-9-02, DS-9-03, DS-12-06, DS-14-11, MS-4-01
- 3037
- 3038
  - 16 January 2002 Made the following changes
- 3039
  - Closed issues: DS-1-01, DS-1-05, DS-2-02, DS-4-01, DS-4-03, DS-4-06, DS-4-07, DS-5-02, DS-5-03, DS-6-02, DS-6-03, DS-7-01, DS-7-02, DS-8-02, DS-11-03, DS-11-05, DS-12-01, DS-12-02, DS-12-05, DS-14-01, DS-14-03, MS-1-01, MS-3-01, MS-3-02
- 3040
- 3041
- 3042
- 3043
  - Created issues: DS-1-06 thru DS-1-09, DS-4-08, DS-4-09, DS-6-05, DS-9-04 thru DS-9-10, DS-11-06, DS-14-12, DS-14-13, MS-4-02, MS-5-01 thru MS-5-03
- 3044
- 3045
  - Closed issues marked blue, new issues marked yellow
- 3046
  - 12 February 2002 Made the following changes

- 3047
- Added OASIS graphic
- 3048
- 3049
- 3050
- 3051
- 3052
- 3053
- Closed issues: UC-7-01, UC-7-02, DS-1-03, DS-1-04, DS-1-06, DS-1-07, DS-3-02, DS-4-02, DS-4-04, DS-4-05, DS-4-09, DS-6-05, DS-7-03, DS-7-04, DS-7-05, DS-8-01, DS-8-03, DS-8-04, DS-9-04, DS-9-07, DS-9-08, DS-9-09, DS-10-01, DS-11-02, DS-11-04, DS-11-06, DS-14-02, DS-14-05, DS-14-06, DS-14-08, DS-14-09, DS-14-10, DS-14-12, DS-14-13, MS-2-01, MS-4-01, MS-4-02, MS-5-01, MS-5-02 and MS-5-03.
- 3054
- 3055
- 3056
- Deferred issues: UC-1-05, UC-2-05, UC-8-02, UC-8-03, UC-8-04, UC-9-01, UC-13-07, UC-14-01, DS-1-02, DS-3-01, DS-5-01, DS-6-01, DS-6-04, DS-7-06, DS-9-02, DS-9-03, DS-11-01, DS-12-03, DS-12-04, DS-13-01 and DS-14-04.
- 3057
- 3058
- 3059
- Converted previously closed issues to deferred: UC-1-14, UC-3-01, UC-3-02, UC-3-03, UC-3-05, UC-3-06, UC-3-07, UC-3-08, UC-3-09, UC-5-02, UC-12-04 and DS-4-06.
- 3060
- 3061
- 3062
- Created Issues: DS-1-10, DS-4-10 thru DS-4-13, DS-6-06, DS-9-11, DS-9-12, DS-12-07, DS-14-14 thru DS-14-16, DS-15-01 thru DS-15-03, MS-2-02, MS-3-03 and MS-5-04.
