

# 41. SYNC FIELD - REVISION 003

---

## 41.0 Overview

This chapter describes the Business Service Request named SYNC FIELD, the Verb being SYNC and the Noun being FIELD.

The purpose of the SYNC FIELD Business Service Request is to enable the validation of data that exists on separate application's data bases. This BSR can cause on-line validation to occur or may be a single tool for synchronizing data.

---

## 41.1 SYNC FIELD

The SYNC FIELD Business Object Document consists of the following Data Type:

1. **FIELD** - Information that applies to the field or data to be validated. This Data Type is required.

## 41.2 FIELD

The Data Type, "**FIELD**", is the only Data Type the Business Service Request "**SYNC FIELD**" uses.

Listed are all the Field Identifiers and Segments that are valid for use within the FIELD Data Type. The first table represents required data.
