A strong earthquake has occurred, but a tsunami **IS NOT** expected along the California, Oregon, Washington, British Columbia, and Alaska coasts although some of these areas may experience a small local tsunami.

A tsunami has been observed at the following sites:
Pago Pago 15cm/0.5ft (peak to peak)

Sea level observations indicate a tsunami was generated which may have been destructive along coasts in the source region along the California, Oregon, Washington, British Columbia, and Alaska coasts although some of these areas may experience a small local tsunami.

At 11:22 PM Pacific Daylight Time on September 27, an [earthquake](https://www.earthquakes.usgs.gov/earthquakes/recentquakes/) with Revised magnitude 7.0 occurred in the South Sandwich Islands. The [Pacific Tsunami Warning Center](https://www.pacific.tsunami.gov/) will issue [messages](https://www.pacific.tsunami.gov/) for Hawaii and other areas of the Pacific outside California and Alaska.

This will be the final statement issued for this event by the West Coast and Alaska Tsunami Warning Center unless conditions require an additional statement. For basic [tsunami information](https://www.pacific.tsunami.gov/), [safety rules](https://www.pacific.tsunami.gov/), and a [tsunami travel time map](https://www.pacific.tsunami.gov/), or [table](https://www.pacific.tsunami.gov/). (NOTE: Travel time maps and the table shows travel time to the nearest wave was generated.)

FROM - WEST COAST AND ALASKA TSUNAMI WARNING CENTER/NOAA/NWS

SUBJECT - TSUNAMI INFORMATION

BULLETIN NUMBER 2
ISSUED 09/28/2006 AT 0724 UTC

...THIS TSUNAMI INFORMATION STATEMENT IS FOR ALASKA/ BRITISH
COLUMBIA/ WASHINGTON/ OREGON AND CALIFORNIA ONLY...

NO - REPEAT NO - WATCH OR WARNING IS IN EFFECT FOR THE STATES
AND PROVINCES LISTED ABOVE.

A TSUNAMI HAS BEEN OBSERVED AT THE FOLLOWING SITES
PAGO PAGO 15CM/0.5FT (PEAK TO PEAK)

EVALUATION
SEA LEVEL READINGS INDICATE A TSUNAMI WAS GENERATED WHICH MAY HAVE
BEEN DESTRUCTIVE ALONG COASTS NEAR THE EARTHQUAKE EPICENTER.
A DAMAGING TSUNAMI IS NOT EXPECTED ALONG THE CALIFORNIA/ OREGON/
WASHINGTON / BRITISH COLUMBIA AND ALASKA COASTS ALTHOUGH
SOME OF THESE AREAS MAY EXPERIENCE SMALL SEA LEVEL CHANGES.

PRELIMINARY EARTHQUAKE PARAMETERS
REVISED MAGNITUDE - 7.0
TIME - 2222 ADT SEP 27 2006
NO - REPEAT NO - WATCH OR WARNING IS IN EFFECT FOR THE STATES AND PROVINCES LISTED ABOVE.

Real-World Impact

Cyclone Larry
March 2006
Information issues

Respondents identified two major issues in relation to the information available to them and how it was being delivered: (1) conflicting information from the Bureau of Meteorology (BoM) and the media and; (2) outdated media information. Many people reported conflicting information between the Bureau of Meteorology (BoM) www internet site and that released by the media. Respondents stated – “don’t stuff around. Be clear and precise”, “the messages were conflicting”, “felt that messages were misleading and contradictory”, “different sources said different things”, “TV, radio and www all giving different advice”, “Austar said Larry would hit by 6 am, and it did [in Mourilyan]” and “the radio said about 10 am – it was all over by 9.30.” Others call for consistency and accuracy of the information provided.
From the information provided by respondents, it is clear that the prediction of ‘time of impact’ needs to be clarified. For instance, people fearing for their lives, were concerned because the ABC was saying “the eye was coming at 8 am, when it had already passed”. Indeed, a 50 year old from Babinda asked to “make clear in broadcasts if they are talking about the eye of the cyclone, or which quadrant”. This feedback of requests to enlarge the scale as actual landfall approached and occurred, include people asking for “_ hourly warnings, more frequent TV updates”, and “a list of the exact locations which may be heavily impacted”. A significant issue is that, even though the BoM describes Larry as a ‘midget’ cyclone, impact time spread from about 6 am in the south to about 8 am in the north. A clearly shaken family in South Johnstone reported cowering in their house as a main roof beam snapped and a panel of louvers blew in, only to hear on the radio that landfall would be in about an hour.

Conclusion

- New Standards are moving the sector forward
  - EDXL Distribution Infrastructure
  - CAP, TWML (etc) - Semantic Payloads
- Improved opportunities for machine processing of warnings to support
  - validation, dissemination and aggregation
  - mapped to visual (or other) presentations
  - better suitable for decision makers
  - crucial information to reach the affected public faster
