Type:

TC Administration announcements

OASIS is pleased to announce the approval and publication of a new Committee Specification by the members of the OASIS Business Document Exchange (BDXR) TC:

Business Document Metadata Service Location Version 1.0
Committee Specification 01
10 June 2014

Overview:

This specification defines service discovery method values for use in DNS Resource Record service fields. A method is first specified to query and retrieve a URL for metadata services. Two metadata service types are then defined. Also an auxiliary method pattern for discovering a registration service to enable access to metadata services is described. The methods defined here are instances of the generic pattern defined within IETF RFCs for Dynamic Delegation Discovery Services (DDDS). This specification therefore defines DDDS applications for metadata and metadata-registration services.

URIs:

The prose specification and related files are available here:

Editable source (Authoritative):

Members of the [1] requested a Special Majority Vote to approve this specification as a Committee Specification. The specification had been released for public review as required by the TC Process [2]. The vote to approve as a Committee Specification passed [3], and the approved CS## is now available online in the OASIS Library as referenced above.

Our congratulations to the TC on achieving this milestone.
