Type:

Result of Voting

We are pleased to announce the approval and publication of a new Committee Specification by the members of the OASIS Transformational Government Framework TC:

Transformational Government Framework (TGF) Pattern Language Core Patterns Version 1.0
Committee Specification 02
28 December 2012

Overview:

The Transformational Government Framework (TGF) is a practical "how to" standard for the design and implementation of an effective program of technology-enabled change at national, state or local government level. It describes a managed process of ICT-enabled change in the public sector, which puts the needs of citizens and businesses at the heart of that process and which achieves significant and transformational impacts on the efficiency and effectiveness of government.

The complete Framework consists of:

- The TGF Primer
- The TGF Pattern Language
- and possibly other future deliverables

The TGF Pattern Language is a formalization of the Framework that is both human-readable and machine-tractable. It provides a concise, structured and formal set of "patterns" using the so-called "Alexandrian form", where each pattern describes a core problem, a context in which the problem arises and an archetypal solution to the stated problem.

This Work Product constitutes the initial set of patterns that form the core of the TGF Pattern Language. This set may be revised and/or extended from time to time as appropriate.

Members of the OASIS Transformational Government Framework Technical Committee [1] requested a Special Majority Vote to approve this specification as a Committee Specification. The specification had been released for public review as required by the TC Process [2]. The vote to approve as a Committee Specification passed [3], and the approved CS02 is now available online in the OASIS Library as referenced above.

Our congratulations to the TC on achieving this milestone.
